FOREWORD

This publication relating to suggested procedures for planning and conducting county FFA Cooperative Acquaintanceship Programs has resulted from an intensive study of FFA Cooperative Acquaintanceship Programs conducted by the Agricultural Education Division, University of Illinois, in cooperation with the Illinois Agricultural Association Youth Committee. The study of FFA Cooperative Acquaintanceship Programs was a part of a broader study entitled, Education Regarding Cooperative Organizations in Rural Areas. The objectives of this broader study involved (1) determining current educational programs in rural communities regarding cooperative organizations, (2) assessing the relative effectiveness of various educational programs regarding cooperative organizations in rural communities, (3) determining opportunities for educating people in rural areas about their cooperatives and (4) developing plans for fostering understanding of the functions and operating procedures of rural cooperatives.

This publication contributes directly to objectives three and four. Dr. Hemp, principal investigator, and Mr. Norman Ehresman in their study of FFA Cooperative Acquaintanceship Programs have discovered and developed many worthwhile procedures that, if followed, will make future FFA Cooperative Acquaintanceship Programs progressively more functional as educational programs. Persons responsible for conducting and participating in future FFA Cooperative Acquaintanceship Programs will find many helpful suggestions in the following pages that will make their job easier and more effective.

Lloyd J. Phipps
Project Director

Introduction

FFA Cooperative Acquaintanceship Programs were held in 65 counties in Illinois in 1963. The leadership for planning and conducting these county programs was provided by county secretaries of organization (CSOs).

The suggested procedures included in this publication were identified from an earlier study entitled "A Study of FFA Cooperative Acquaintanceship Programs in Illinois" conducted by the Division of Agricultural Education, University of Illinois and sponsored by the Illinois Agricultural Association. As a part of this study a survey was made of all CSOs to identify successful and unsuccessful practices used in planning and conducting FFA Cooperative Acquaintanceship Programs.

The purpose of this publication is to provide county secretaries with a prototype or model for developing new FFA Cooperative Acquaintanceship Programs or for improving existing programs under the sponsorship of Farm Bureaus. All of the practices and procedures outlined in this report have been field-tested and evaluated. It is obvious that no one pattern of procedures will be successful in every county in Illinois; however, county secretaries of organization will find all of the procedures included in this report worthy of consideration and most of them worthy of adoption.

Developing Objectives

The objectives of FFA Cooperative Acquaintanceship Programs should be clearly defined and stated. These programs can be no stronger than the objectives on which they rest. In a recent survey of CSOs the following major objectives of FFA Cooperative Acquaintanceship Programs were identified:

1. To acquaint students with cooperatives.
2. To help students understand how cooperatives function.
3. To help students understand the Farm Bureau and the Illinois Agricultural Association.
4. To acquaint students with job opportunities in cooperatives.

The objectives of FFA Cooperative Acquaintanceship Programs should be educational in nature and compatible with the objectives of the high school vocational agriculture programs in the county. County secretaries of organization should establish objectives which make it possible for these programs to supplement the educational activities of cooperative organizations within the county. In many counties FFA Cooperative Acquaintanceship

Programs sponsored by Farm Bureau and its affiliates are just one of several educational activities sponsored by cooperatives for high school vocational agriculture students. In order to secure maximum benefits from Cooperative Acquaintanceship Programs CSOs and teachers should coordinate the scheduling of all educational activities. For example, teachers may teach a unit on cooperatives to their advanced students, and CSOs may follow through by scheduling the Cooperative Acquaintanceship Program immediately after the instructional unit has been completed at the schools in the county. For some students the Holiday Conference may become the third educational activity of the school year.

Deciding on a Name

An appropriate name for these programs is "FFA Cooperative Acquaintanceship Program, sponsored by _____."

All agricultural cooperative organizations should be encouraged to support and participate in conducting FFA Cooperative Acquaintanceship Programs. The names of those organizations that assist in sponsoring these programs should be included in the title. It is not desirable, from an educational point of view, to limit the sponsorship to any one cooperative organization unless that organization includes the membership of the majority of agricultural cooperatives in the geographical area being served.

Making Preliminary Plans and Contacts

The first contact the CSOs make with the high schools should be made with the building principal or school superintendent. When CSOs visit the high schools to discuss the possibilities of involving the vocational agriculture teachers and FFA members in FFA Cooperative Acquaintanceship Programs they should emphasize the following points:

1. The objectives of these programs are educational in nature.
2. The program will be designed to enrich the instructional program of the vocational agriculture teacher.
3. Vocational agriculture teachers will be asked to participate in a planning meeting to help plan the program.
4. Students who participate in county acquaintanceship programs are eligible to attend a state Holiday Conference at Bloomington, Illinois.
5. Other award tours including a trip to the American Institute of Cooperation are available to certain students.
6. The FFA Cooperative Acquaintanceship Program will be held after school hours.

Before departing from the school administrator's office the CSO should ask permission to contact the vocational agriculture teacher and discuss with him the possibilities for involving the teacher and certain FFA members in the program.

Financing the Program

An abundance of financial support is not one of the criteria for presenting a desirable type of program. A good program does not require that large sums of money be available.

The decision as to how much money to spend and how the money is to be collected must be made at the county level. In most cases, the various sponsoring agencies share in the cost of the total program according to their ability to contribute, and according to benefits which such an educational program may eventually return to them.

A county organization of all the agricultural cooperatives located within the county would be an ideal agency to coordinate the financing of this program. Financial arrangements need to be handled through regular channels of affiliated companies or other sponsoring companies with the approval of the boards of directors. Decisions regarding financing should probably be made at a time when teachers and school administrators are not present. For this reason, the question of financing has not been included in the suggested agenda for planning meetings.

Conducting the Planning Meeting

A planning meeting should be held with the CSO, vocational agriculture teachers, school administrators, and representatives from the sponsoring cooperatives present. This meeting can be held about a month prior to the time when the FFA Cooperative Acquaintanceship Program is to be held. The CSO should be responsible for calling the meeting and serving as chairman. Some questions to be discussed and suggestions to remember in making final decisions are as follows:

1. When and where will the program be held?

   The FFA Cooperative Acquaintanceship Program should be held in the fall or early spring on a school day, but not during school hours. A desirable program would include registration at 3:45 p.m., a general meeting of all participants at 4:00 p.m., small group discussions at 4:45 p.m., and a banquet at 6:00 p.m. The banquet and subsequent program should not last beyond 9:00 p.m.

2. Who will be invited to attend?

   The board members of the various cooperatives and the high school superintendents, principals, and vocational agriculture teachers should be invited to the banquet. Only students enrolled in junior or senior vocational agriculture classes are usually invited to attend the program. Staff members from cooperative organizations are usually asked to participate in the program so they would automatically be included on the guest list.

3. What should be the general nature of the program?

The planning meeting is the time to coordinate the content that is to be discussed at the Acquaintanceship Program with the instructional programs of the schools. The teacher should be asked to suggest questions which they would like to have discussed during the Acquaintanceship Program. The topics to be discussed should be neither too complex nor too simple, but rather adjusted to the level of competency of the FFA members and the time available for discussion. If the nature of the discussion material is too simple, the students will become bored and the purposes of the program will be defeated. If the material covered in the discussion meetings is "above the heads" of the students, they will be lost and again the purposes of the program will be defeated.

The sample program in the appendix of this report may help CSOs plan programs for their counties. Also, the section of this report entitled "Conducting the Program" includes suggested activities which are commonly used in FFA Cooperative Acquaintanceship Programs.

4. Who should be asked to serve as discussion leaders?

The discussion leaders for the program may be chosen from among the cooperative company managers, or other cooperative employees or members who are knowledgeable in the area of cooperatives. Some of the people who can be used for instructors are: CSO, agency manager, service company manager, farm adviser, serum representative, producers seed representative, livestock representative, and other state and field staff of Farm Bureau and cooperatives.

5. What kind of meals should be served?

Providing a meal is an important way to impress guests at the Acquaintanceship Program. The meal can range from a smorgasbord to a banquet. One point to remember is that young men have big appetites--be sure to have plenty of food. Fancy meals and fancy menus are not necessary for a successful banquet. In counties where securing adequate financing is a problem, the meal may be omitted.

One final suggestion regarding planning meetings is that CSOs should use the "Worksheet for Planning FFA Cooperative Acquaintanceship Programs" included in the appendix of this report. As decisions and suggestions are made they can be recorded on the planning sheet. By using the planning sheet, CSOs have both a guide for the planning meeting and a place to record notes and suggestions.

Conducting the Program

Registration procedures should include recording the names of all the participants and assignments of the FFA members to the small study groups. If possible, one member from each school represented should be assigned to each discussion group. FFA members should wear their FFA jackets. Other participants should be given name tags specifying the organization they represent and their positions.

Most high school students have a snack when they arrive home from school. Doughnuts and milk could be served during the registration process to help tide them over since some will be having dinner later than usual.

A general meeting of all the participants should be held following the registration. During this meeting, the CSO or other general chairman should introduce the small group discussion leaders, the school administrators, and the vocational agriculture teachers as well as the other guests, excluding the FFA members.

The main presentation at this meeting could be a speaker, series of speakers, panel of experts, or a movie or other visual presentation that deals with the general topic of cooperatives.

Following the main presentation the discussion groups can be directed to their meeting rooms.

The discussion leaders should be prepared with an outline of the specific questions to be discussed and should make reference to the materials that were handed out during the registration period. All members of the discussion groups should be encouraged to participate in the discussions.

During the discussion group meetings, the agriculture teachers could conduct a meeting of their own. A topic for this meeting might be the total educational activities of the cooperatives or teaching high school classes about cooperatives. It might be well to ask these teachers for ideas on improving the educational programs of the sponsoring cooperatives. A member of the State Supervisory staff in Agricultural Education might be asked to lead the teachers' class as a representative who knows and understands activities being carried out at the sectional, district, and state levels.

Usually some FFA member is capable and willing, if contacted in advance, to give the invocation for the banquet. The general chairman should introduce the more distinguished guests following the meal and acknowledge these groups or persons who helped to make the program possible.

The general chairman should introduce the main program for the evening. The main feature of the program may be a speaker or a film, but should be entertaining in nature as well as informative in the area of cooperatives. Care should be taken to insure that this part of the program is not too long.

The final task of the evening is to collect the completed evaluation check sheets from FFA members and from the other participants.

Publicizing the Program

Public relations is a vital part of any program. It is important that the public, especially members of the various sponsoring cooperatives, be informed prior to and following the FFA Cooperative Acquaintanceship Programs.

Publicity prior to a program should include newspaper releases telling about the planning meetings and the plans for conducting the program. Publicity releases following a program may include newspaper articles and tape recordings for radio programs.

See the Appendix I for a sample news release.

Providing Suitable Facilities and Materials

The FFA Cooperative Acquaintanceship Program may be held at the County Farm Bureau offices or other suitable cooperative facilities in order that the FFA members have a feeling of being guests of the cooperatives.

The lobby of the office, provided with a desk or table, can serve as a registration point for the participants. Name tags should be provided for participants, other than FFA members who will be wearing FFA jackets with their names on them.

The registration point is a desirable place to hand each FFA member a packet of materials including such items as pencils, paper, and a schedule of events for the program. Information booklets and other materials to be used in the small group discussions should be distributed at the small group meetings.

Several small offices or meeting rooms are needed for conducting the small group discussions. These small meeting rooms should be large enough to accommodate from six to 12 persons.

Facilities for the banquet following the discussion meeting can be secured according to the availability of such facilities in the area. If space and facilities are available at the same place that the discussions are taking place, it would be desirable to hold the

banquet there. An alternative arrangement would be to hold the banquet portion of the program at a local restaurant, or to have no banquet.

A meeting room large enough for a general assembly of the participants is needed. Usually the farm bureau general meeting room is large enough for this purpose.

Audio-visual equipment may be needed in the large meeting room and at the banquet.

Evaluating the Program

The program will be evaluated by everyone in attendance. It is a valuable aid to the persons planning next year's program to know how the people evaluated the program.

Observations and suggestions for improving next year's program should be put in writing by the persons involved in presenting the program and handed to the CSO who should file them for use in planning the next program.

Another valuable tool for use in planning the next year's program is the evaluations made by the FFA members. The students should not be asked to make a short talk to the group on how they liked the program or how much they learned, but rather should be given an evaluation check sheet whereby they make their evaluation anonymously. A sample evaluation check sheet is included in Appendix II of this report.

Planning for Program Follow-Up

The major purpose of the FFA Cooperative Acquaintanceship Program is to supplement the other educational programs of both the agriculture teachers and the cooperatives.

A complete year's program of any cooperative organization should include many other activities of an educational nature. Such activities as inviting FFA members to meet with the cooperative's board of directors, forming a junior cooperative, inviting FFA members to act as members, directors, managers, and workers for a day, providing agriculture teachers with teaching aids, acting as resource persons for agriculture class discussions, and supplying information to the teachers about local cooperatives should be a part of the educational program of every agricultural cooperative.

The increased interest and knowledge about cooperatives which will result from conducting an Acquaintanceship Program should give rise to increased requests for information and tours of facilities.

Worksheet for Planning FFA Cooperative Acquaintanceship Programs

A. Name of program _____

_____

B. Date and time _____

APPENDIX I

LOCAL COOPERATIVES TO HOST COUNTY FFA MEMBERS

Approximately _____ FFA members and their instructors who are junior and senior vo-ag students at all the high schools in the county will be guests of local farm cooperatives at an "FFA Cooperative Acquaintance Day Program."

The program to be held _____ _____ at the
(day) (month & date)
_____County Farm Bureau office is being conducted and sponsored by the _____County Farm Bureau, _____ County Service Company, Country Companies Insurance, _____ _____, _____ _____ and _____ _____.

(List all co-sponsoring affiliates or non-affiliated cooperatives involved).

The purpose of the event is to outline the role of cooperatives in our area, with emphasis on their local functions as farmer-owned and controlled businesses with added emphasis placed on career opportunities for interested young men with farm experience according to _____, County Secretary of Organization and Program Chairman.

Registration for the event will begin when the boys arrive at the local Farm Bureau office following afternoon classes on _____. A welcome and greetings
(day)
to the conferees will be extended by _____ President of the _____ County Farm Bureau (or Service Co.) and _____ _____Sectional FFA Vice President from the _____ Chapter. (Give address if outside county.) A film (name of film) will be shown depicting the importance of cooperatives as one of the four major ways of doing business in America. Mr. _____ of the (name of coop or business) will speak to the group. He is (title & job description) for the (name of coop).

Following the general assembly, the FFA boys will go to small workshop groups where local coop managers will lead discussion regarding their respective business history, operational make-up, functions and services to its members and career opportunities for young men with an interest in farm related industry.

School administrators and Directors of the sponsoring cooperatives will join the FFA boys and conference staff personnel at __(name and location of eating place)__ for a banquet. Highlighting the day's activities will be a humorous and inspirational address by _____, _____.
(name) (title - company and address)

Mr. _____ is a well known speaker throughout _____
(Illinois, Nation or area.)

Note: (Reporters from local news media such as newspapers, radio or T.V. stations should be invited to attend the event. Never underestimate the power of the press if just invited. Be sure and get pictures for your own publication.)

APPENDIX II

EVALUATION FORM

FFA COOPERATIVE ACQUAINTANCESHIP PROGRAM

1. Was the conference as a whole worthwhile? List Reasons.

2. Should the conference be repeated next year?

3. What did you like the best?

4. What did you like the least?

5. How would you improve the conference?

TECHNICAL EDUCATION

BASIC PROVISIONS

I. PURPOSE

The purpose of Title III of the George-Barden Act is to provide assistance to the public schools in the field of Technical Education. These funds are to be used in stimulating an educational program designed to fit persons for useful employment as highly skilled technicians in recognized occupations that require scientific knowledge in fields necessary for national defense.

II. HIGHLY SKILLED TECHNICIANS IN RECOGNIZED OCCUPATIONS

The broad field of these occupations covers a wide range of activities, great variations in scope and level of work, and a multitude of payroll job titles. At least two general areas or groups may be distinguished.

- Payroll job titles which are well-known such as are found in manufacturing, construction, operation, processing, maintenance, and other groups. At one time some of these occupations were largely manipulative in character. With modern industrial progress and technological change, the recognized job content has required more and more application of specialized scientific knowledge to specific job situations.

- Occupations of more recent origin are more difficult to classify. They do not encompass the same work responsibilities as those referred to above, although both groups may be involved in similar activities. Examples of these occupations include:

  - Agricultural Industry Technicians
  - Business Data Processing Technicians
  - Electrical Technicians
  - Electronic Industrial Data Processing Technicians
  - Electronic Technicians
  - Engineering Aides
  - Industrial Technicians
  - Instrument Technicians
  - Tool Design Technicians

The main requirement of highly skilled technicians is technical knowledge and the ability to apply it. Such occupations demand the practical application of technology in specific fields and require specialized and technical skills developed through intensive training. They require more than just the understanding of scientific principles. These principles must be applied to specific situations. Basic science and mathematics are foundations for the applied technology, and on these foundations the special applications are developed.

III. CHARACTERISTICS OF AN OCCUPATION NECESSARY FOR NATIONAL DEFENSE

An occupation will be considered necessary for the national defense if:

- A significant number of those engaged in the occupation are employed in the design, development, testing, manufacture, processing, construction, installation, operation, maintenance, or servicing of equipment or products (or parts or accessories thereof) which are of importance particularly for military or other defense activity, or are employed in providing technical services of importance particularly for military or other defense activity, or

- There is a critical shortage of those available for such employment.

In addition to the above provisions, training may be considered to be necessary for the national defense if such training is particularly designed for those employed or to be employed as highly skilled technicians in the military, in supplying of critical products or services to the military, in scientific research using technical assistance, or in making available services or supplying products construed to be of critical importance in national defense and national security.

IV. AGENCIES ELIGIBLE TO APPLY FOR ASSISTANCE

Any public secondary school, junior college, adult school, or office of a county superintendent of schools may submit an application for approval.

V. KINDS OF ACTIVITIES THAT QUALIFY

The Technical Education program provides for pre-employment and supplementary training, and specific activities for which these funds may be used include:

- Salaries and necessary travel expenses of local school personnel, including teachers, coordinators, supervisors, vocational guidance counselors, teacher-trainers, directors, administrators, and others
- Purchase of instructional supplies and teaching aids
- Securing necessary educational information and data as a basis for the proper development of Technical Education programs to insure adequate vocational guidance and counseling
- Occupational studies and surveys needed for the planning and development of Technical Education
- Purchase, rental, or other acquisition; and maintenance and repair of instructional equipment
- Necessary costs of transportation of students
- Work experience education programs
- Travel expenses of members of advisory committees
- Related technical instruction for apprentices
- Maintenance of adequate programs of administration, supervision, and teacher training

VI. PREPARATION OF APPLICATION

The application should explain in detail the nature of the project as well as provide the necessary fiscal information. Since the available funds will not be sufficient to cover all demands made upon them, priority will be given applications in terms of the significance of the project proposed and the degree of local district effort with particular reference to the amount of matching money available. It is expected that at least one-half of the project costs will be borne by local district funds.

Applications must be submitted by October 29, 1965, if they are to be considered in the initial allocation of funds. Applications made after this date may be considered if additional funds are available.

It is suggested that the following items be used as a guide in preparing the application and that there be sufficient detail included under each heading so as to fully explain the nature and purpose of the proposed activities and provide a factual basis for evaluating the application.

- Identification of District -- The first page of the application should follow the format set forth on page 8 of these basic provisions. This page must be properly signed by either the superintendent or his designate.

- Fiscal Summary -- The second page of the application should follow the format set forth on page 9 of these basic provisions. The summary of proposed expenditures will be used to compute the amount of Title III funds that are to be allotted the project.

- Description of Project -- A statement must be prepared by the district indicating the proposed activities of the project. This statement should be in such detail as appropriate to support the request for assistance as follows:

  - Educational objectives of application
  - Procedure of study or research project
  - Courses or curriculums affected
  - Personnel involved

If personnel are already available, they should be named and their background and experience included; if not, indicate the job specifications for the professional positions to be involved.

- Form of Final Report of Study or Research Project -- Sufficient copies of the results of the study or research project should be made available for distribution in the State. The format of the report, the number of copies needed for distribution, and the date for completion of the report should be mutually arranged with the appropriate Regional Supervisor in your area.

- Administration and Supervision -- The exact nature of the services to be performed should be identified, and the organizational framework indicating where such administration and/or supervision fits into the total district organization should also be included. A list of educational advisory committee members and their affiliation shall be attached. The names of all personnel involved in the administration and supervision of the project should be listed. It will be particularly helpful if this listing will include all administrative and/or supervisor personnel involved in the work of the project irrespective of whether or not assistance is being requested for salary paid. Administrative or supervision credentials held should be indicated for each individual and nature of services performed indicated (i.e. administrator, supervise Technical Education program, coordinate electronics classes, etc.). The amount of salary to be charged to project service represents the portion of individual's total salary that reflects the percentage of the total time spent on the project activities.

- Instruction -- When an instructional program operates as a part of, or in relation to, the proposed project, the instructional costs must be identified irrespective of any fiscal support request for such instruction. A list of all technical classes included in the curriculum should be attached and an outline of the course content included or on file in the appropriate Regional Office. The names of all instructors involved in Technical Education courses related to the project should be indicated. It is of particular importance to identify the full extent of the Technical Education program in order that the amount of Title III funds that can be used in California may be ascertained. The amount of salary reported should have reference to Technical Education classes only. If an instructor spends one-half time teaching classes other than those eligible for assistance, only one-half of his total salary should be identified in the application.

- Equipment and Supplies -- Requests for assistance with equipment and supply purchases, in addition to itemization, should clearly indicate how the requested items will improve the instruction program and are necessary to the successful accomplishment of the objectives of the project. All equipment costing $25 or more should be individually listed. Each item should be described with enough detail so that equipment can be later identified if a physical audit is made. All supply items and equipment items under $25 should be classified as supplies. The unit value is the determining factor. For example, a $20 micrometer would be classified as supplies even though 10 micrometers at a total cost of $200 might be involved. Be sure to indicate unit cost in all entries involving quantity purchases.

- Other Personnel Costs -- Any personnel employed not covered under administration, supervision, or instruction, such as special research assistants, clerical, or maintenance persons, are not limited by any specifications in the California Plan for Vocational Education. There should be indications, whenever appropriate, that qualified persons will be employed for specialized assignments.

VII. PROCEDURE FOR SUBMITTING AN APPLICATION

The purpose of the application for approval is to identify the proposed Technical Education project with sufficient detail so that the activities may be evaluated in terms of the provisions of the California Plan for Vocational Education.

- The completed application should be checked for the following:
  - Title page (see page 8)
  - Summary of proposed expenditures (see page 9) attach explanation of each item
  - Description of project (see page 4)
  - Equipment and supply lists (see page 5)
  - Advisory committees list (see page 5)
  - Listing of technical classes (see page 5)

- Three copies of the application must be submitted to the appropriate Regional Supervisor (see below) where the request will be reviewed and subsequently sent to the State Department of Education offices in Sacramento for final approval. In preparing an application, it may be desirable to request assistance from the appropriate Regional Office of the State Department of Education identifying the nature of the project activities and preparing an application. Such assistance may be requested from any one of the following offices:

Bureau of Agricultural Education

So You Want to Be an Officer in the F.F.A. Cornell Miscellaneous Bulletin 40.

New York State Coll. of Agriculture, Ithaca
MF AVAILABLE IN VT-ERIC SET.
Pub Date - Mar63 8p.

*VOCATIONAL AGRICULTURE; PERSONAL GROWTH; *PROGRAM DEVELOPMENT; *STUDENT LEADERSHIP; *LEADERS GUIDES; *YOUTH CLUBS
*FUTURE FARMERS OF AMERICA

Designed primarily to assist students in assuming positions of leadership in the Future Farmers of America (FFA), this bulletin was based on the author's experience with officers of the FFA at local, county, regional, and state levels. It includes information on the selection, election and training of officers, program activities, officers meetings, and leadership activities for officers and members. It provides guidelines for personal appearance, manners, behavior, meeting people, table manners, and ideals and standards. The qualifications, constitutional duties, and responsibilities are outlined for the organization's president, vice-president, secretary, treasurer, reporter, sentinel, and parliamentarian. A selected list of references is included. (JM)

SECTION I

YOUR JOB AS AN OFFICER IN THE F.F.A.

Organizations are made up of individual members, some of whom become officers to guide and direct the work of the group. It is of primary importance that careful attention be given to the nomination and election of officers who will lead the chapter in a successful program of activities for the year.

SELECTION OF OFFICERS

The boys selected to be officers should have a definite interest in agriculture and the F.F.A. They should be enthusiastic about the organization and be willing to devote their time to making it a success. They must be able to express themselves and be understood by others. The ability to lead and direct the members of the chapter in their various activities is essential. The members selected to be officers should have the potentialities for future advancement and progress in school and F.F.A.

ELECTION OF OFFICERS

Any one of several methods of electing officers may be used with equally satisfactory results, provided the method is varied to suit the particular situation in a given chapter. The most common way to select officers is through the nominating committee. This should be a representative group of members from the chapter who will recommend nominees on the basis of their ability. Neither personal friendship nor popularity should be the deciding factor.

All boys interested in applying or running for office should be interviewed by the nominating committee. The qualities listed under *Selection of Officers* should be the basis for the nominating committee's recommendations. When the committee is ready to report, allow sufficient time for the discussion of each person nominated. Nominations from the floor are also in order and should be treated the same as those nominated by the committee.

After the discussion of candidates, each candidate should be voted on in the order in which he was nominated. The manner of voting should be decided by the chapter unless provisions are made for it in the constitution and by-laws.

TRAINING CHAPTER OFFICERS

The job of being a good F.F.A. officer is not over when the election takes place, but is just beginning. The old saying that leaders are born, not made, has been disproved on numerous occasions. Any member of the F.F.A. who wants to become an officer can succeed if he applies himself. Each chapter, however, must spend time on leadership training if it is to develop capable officers and members who will become future community leaders.

One of the best ways to train chapter officers is to provide a wealth of activities for all members on the local, state, and national level. That we "learn best by doing" is a proven fact. The many activities of the F.F.A. are designed to give every member the opportunity to participate in several events, providing a basis for the all-round development of the future farmer.

PROGRAM OF ACTIVITIES

The success of any chapter depends upon the development of each individual member. The officers must guide the members in planning a program of activities that will provide a variety of experiences for all members. The needs and interests of the individuals should be considered in planning such activities as supervised farming, cooperative enterprises, community service, leadership, thrift, conduct of meetings, scholarship, recreation, and public relations. Each phase of these activities must be included in a well-rounded program.

It is generally neither advisable nor practical for all members to participate in all activities. F.F.A. members, like all young people, have many different interests and inclinations. It is therefore one of the functions of the F.F.A. organization to provide the opportunity for its members to participate in activities that are of interest to the individual and that give promise of being worthwhile and educational to him. Your chapter should attempt to make this opportunity available to its members.

REGULAR OFFICERS MEETING

The importance of regular meetings of the chapter officers and executive committee should not be overlooked. The preparation of an agenda for chapter meetings should

---

The material in this bulletin is based on experiences in working with officers of the Future Farmers of America organization in local chapters, county and regional groups, and state associations. This bulletin has been designed primarily to help prepare boys for positions of leadership in the F.F.A. on local, regional, and state levels. Material of a similar nature has been used in leadership training classes in many parts of the country. Special appreciation is expressed to Mr. J. O. Sanders, Executive Secretary, New York Association of Future Farmers of America, for reading the manuscript and making helpful suggestions.

be an important activity of the officers at their sessions. To a considerable extent, the chapter officers are comparable to the board of directors of a business organization. Their actions and thoughts should serve as a basis for much of the final action taken by the members. A well-planned chapter meeting, with an agenda prepared in advance, will help to assure wise use of time.

Activities designed to improve the officers' abilities can be carried on much better during officers' sessions than at any other time. Special topics that will improve the leadership qualities of officers during their term of office may be discussed. Interest frequently lags because time is needlessly spent on minor details that should have been taken care of in the officers' meeting.

LEADERSHIP ACTIVITIES FOR OFFICERS

Shortly after officers are elected, they should meet with the chapter adviser for their first leadership training period. Several points to be considered are:

1. All officers should know their parts in the opening and closing ceremonies. These should be practiced before the first regular meeting when the new officers take over their duties. A good presentation of the ceremonies will insure the confidence and support of the members.

2. All officers should become thoroughly acquainted with the history, aims, and purposes of the F.F.A.

3. Chapter officers' meetings should be held at regular intervals, preferably every two weeks or oftener.

4. The duties and responsibilities of each officer should be discussed; he should then be expected to assume and carry them out.

5. The use of official F.F.A. jackets by chapter officers is strongly recommended. Local chapters may assist officers in purchasing their jackets.

6. Special topics, which are not devoted to specific leadership traits, should be discussed at the officers' meeting. The list might include the following: personality traits; personal appearance; proper manners for all occasions; how to meet people; carrying on a conversation; public speaking; citizenship; community activities; and others.

LEADERSHIP ACTIVITIES FOR ALL MEMBERS

Because all officers are chapter members, training must be provided for everyone to assure a supply of capably trained officer candidates. Many chapter activities are designed to provide learning opportunities for future officers. Some of the successful ways to do this are listed below:

1. Select or appoint a set of assistant officers. Let them substitute for the regular officers occasionally.

2. Use every member on some committee during the year. As many members as possible should serve in the capacity of the chairman.

3. Have well-planned chapter meetings with an agenda set up in advance and made available to members.

4. Use a part of the meeting to discuss citizenship, conduct of members, personal appearance, and other items designed to improve the members.

5. Select different members to represent the chapter at group or regional meetings and other activities.

6. See that all members are familiar with the F.F.A. organization and with the possibilities for advancement within the organization.

7. Urge all members to take an active part in the meetings by discussion, committee reports, or in other ways.

Additional experiences that your chapter might provide for its members are: read one or more books in the F.F.A. library; add ten or more bulletins or books to personal library; subscribe to the National F.F.A. magazine or an agricultural magazine; participate in the chapter public speaking contest, parliamentary procedure practice, or cooperative buying or selling; write one or more newspaper articles for publication; attend one or more county or regional F.F.A. meetings, or meetings of an adult organization; serve on two or more committees; lead a group discussion; participate in one or more chapter programs; participate on one or more of the following: chapter softball, basketball, or other athletic team, chapter quartet, glee club, or band; participate in one or more public programs such as: chapter banquet, chapter school assembly, radio or television, PTA, civic club, farmer's meeting, other public program sponsored by the chapter; participate in one or more of the following campaigns: safety campaign, fire prevention campaign, livestock loss prevention campaign, pasture improvement campaign; participate in one or more of the following chapter contests or awards programs: farm and home improvement, farm electrification, farm mechanics, soil and water conservation, chapter star farmer, state star dairy, poultry, or livestock farmer, chapter activity contest; exhibit one or more animals, agricultural products, or agricultural mechanics projects in a local, county, or state fair.

Other experiences for selected members of the chapter are: attending the State Leadership Training Conference and State Convention; attending the National F.F.A. Convention; and serving as a county or State officer.

SECTION II

CONDUCT OF MEMBERS OF THE F.F.A.

Future Farmers have many opportunities to appear before the public. Because any organization or group is judged by the actions of its members, Future Farmers should be on the alert to conduct themselves properly at all times. An excellent slogan adopted by many chapters regarding their members is, "A Future Farmer is always a gentleman."

PERSONAL APPEARANCE

Dress properly for all occasions. If you are wearing an F.F.A. jacket, be sure it is clean and neatly pressed. Wear it only on those occasions when it will reflect credit upon the organization. The national organization further recommends that no school letters or similar awards be displayed on the jacket. The organization and the individual are both being judged when the jacket is worn. For other times, dress according to what is considered good taste for the occasion. Personal cleanliness and good grooming are a necessity. Shoes should be cleaned and shined at all times. Hold your head high and walk in a manner to indicate that you are proud to be a Future Farmer.

PROPER MANNERS

Respect and consideration for others is the mark of a well-mannered person. Future Farmers should always stand until their elders are seated. Offer your seat to persons older than you and to the ladies. If you must pass directly in front of someone, do so by saying "excuse me." Do not talk across a room, but walk to a person before beginning a conversation. If you are in doubt about what constitutes good manners for a certain occasion, follow the actions of your host or some other mature person.

It is not enough to practice these traits when you are away from home. Your family, your friends, and your community also deserve the respect and courtesies shown to other people. Good manners are practiced daily, not reserved for special occasions. Show your parents, your teachers, and others your appreciation for the many favors and gifts that come your way. A simple "thank you" will return rich dividends.

BEHAVIOR IN PUBLIC

Choose your friends and associates wisely. If you do not want to be seen doing certain things or going to certain places, refrain from these activities. We are judged by what people see; make an effort to let them see you at your best. Respect the rights of others at all times. Neither destroy public property nor approve such actions in others. You can help influence others to abide by rules and regulations because you are in a position to exercise leadership.

MEETING PEOPLE AND HAVING A CONVERSATION

Young people are frequently ill at ease in formal gatherings. If you do not know the persons at a meeting introduce yourself to them. Break the ice in an easy manner. Be sure you understand the person's name and title so you can present him to someone else. Always introduce your parents by saying, "Father (Mother), this is Bill Smith. Bill is the secretary of our F.F.A. chapter." Present your friends to adults in the same way., "Mr. Brown, this is Bill Smith." Always present a gentleman to a lady, and a younger person to an older person. Practice will make you perfect in the matter of making introductions. Try to find something in common to talk about. Do not monopolize the conversation, but feel free to make comments other than yes or no. Be a good listener and you will seldom be uninteresting. Because you are judged by the way you talk, make an effort to express yourself in the best grammar possible. Use words that will be understood and will convey the meaning intended.

MANNERS AT THE DINNER TABLE

Future Farmer banquets and other public dinner gatherings put the F.F.A. member in a position to be closely judged by the public and also provide an opportunity to show that he is a gentleman in every respect. If it is a mixed group, do not be seated until all the women have a a seat. If you are placed next to a lady, offer to assist in seating her. Observe the host or hostess in the proper use of silverware. Take a moderate serving of dishes that are passed, but never fill your plate completely with your favorite food. Cut meat or other food into small particles as you progress through the meal, never all at one time. If a dessert is served, wait until everyone else is ready to eat before you begin. Eat slowly and chew silently. Be willing to take your turn in securing food or other necessary supplies from the kitchen. If an older person is seated at your table, be sure that he is served and taken care of adequately. When you have completed the meal, wait until everyone else has finished before leaving the table. Take time to talk with your neighbor during the meal.

IDEALS AND STANDARDS

The Future Farmer Creed stresses that "playing square" with those with whom you associate is very important. A Future Farmer's word should be his honor. The example you set will be followed by others in the chapter. If you finish what you start and do a good job, you have no reason to be ashamed of your actions, regardless of your measure of success. Promptness and enthusiasm in doing your job will enable you to live up to your ideals and standards. Set them high and endeavor to reach them.

SECTION III

THE JOB OF THE PRESIDENT

QUALIFICATIONS OF THE PRESIDENT

One of the first things to consider in the selection of the president is whether he has the qualifications for doing a good job. Because the president directs the work of the organization, he must be able to get along with people and to make them feel that they are an important part of the group. He must be a part of the group himself and not aloof in his manner or ways.

CONSTITUTIONAL DUTIES

Most constitutions state the duties of the president. The president should make a thorough study of the local chap-

ter constitution and be familiar with its provisions. These duties generally include the following: preside over all regular meetings; call all regular and special meetings of the chapter; call all meetings of chapter officers; appoint all committees and serve as an *ex officio* member of these committees; and represent the chapter at special gatherings unless some other member is designated.

RESPONSIBILITIES OF THE PRESIDENT

The success or failure of a local chapter will depend a great deal on the work of the president. He should not be expected to carry the entire load, but must be capable of providing leadership to reach the goals set by the group. To do this, the following responsibilities should be kept in mind.

Help develop a program of activities to fit local conditions which will challenge every member of the chapter.

Organize the chapter's affairs to give every officer and member something to do.

Be sure that a definite program is planned for every meeting.

Acquire a working knowledge of parliamentary procedure and conduct all meetings accordingly.

Frequently check with the other officers to see that they are doing their jobs well.

Divide the duties of your position with the vice-president. Be sure he has definite responsibilities.

Make a monthly check with each committee chairman on the progress of the group.

Plan far enough ahead for every officer and member to know what is going on.

Learn your part and expect every other officer to know his part in all chapter ceremonies, including initiations.

Be sure your chapter has something to do and is doing it.

Be a *leader* at all times and the rest of the work will be easier.

If the following questions can be answered in the affirmative, your chapter president should be a desirable officer and reflect credit upon the organization:

Is he a leader who will assume the responsibility of directing others?

Does he have the ability to conduct meetings according to accepted parliamentary practices?

Does he have the ability to think clearly and to make decisions?

Does he have a strong clear voice and the ability to speak distinctly?

Does he believe in the organization and will he work unceasingly to insure its success?

Does he show enthusiasm and initiative in the work he is doing?

SECTION IV

THE JOB OF THE VICE-PRESIDENT

The information presented under the job of the president applies equally to the vice-president. A good vice-president will assist the president in every possible way to make the chapter activities a success. He is the president's righthand man on all occasions.

The following specific responsibilities are delegated to the vice-president: preside over meetings in the absence of the president, have charge of committee work in general, be prepared to assume the duties of president at any time, and carry out other duties as designated by the president.

The job of the vice-president will take on meaning only to the extent that he is delegated responsibilities by the president. He must be willing to do many jobs that the president does not have time to do, and to stand in for the president when necessary.

SECTION V

THE JOB OF THE SECRETARY

No organization can function well without the services of a good secretary. A good secretary is aware of all the actions of the group and is ready to supply needed information at any time. His duties are many and varied, with the work of the entire chapter depending a great deal upon the efficiency with which he conducts his office. Some of the commonly known duties of this office are to:

Prepare and read the minutes of previous meetings.

Attend to all official correspondence.

Send out and post notices of meetings.

Prepare chapter reports.

Have available the agenda for the meeting.

Keep abreast of all goings-on in the chapter.

If the secretary is to do the job assigned to him, he must have the necessary supplies and equipment on hand. These will include the following materials:

Official F.F.A. secretary's book.

Official F.F.A. manual (latest edition).

Copies of the local and state constitutions and by-laws.

Copies of the local, state, and national programs of activities.

Copies of the proceedings of the state leadership conference.

Lists of committees and committee reports.

Any other reference material that may be called for during the meeting.

MINUTES OF THE MEETING

The official minutes of the meeting constitute a permanent record of the activities and actions of the chapter. They

must be accurate and complete. Effort must be made to get the correct wording of all motions and the final disposal made of them by the group. The minutes should follow an approved style and be written in a legible manner. They should be neat and easy to read.

HANDLING CORRESPONDENCE

Because the secretary deals with many people outside the local chapter, the impression he makes reflects on the chapter. All letters should be written in an approved manner and in proper style. Attention should be given to correct spelling, proper punctuation, and a good choice of words in the letter. Replies should be brief and prompt. The *prompt* secretary is generally a good secretary.

FILING MATERIAL

A definite plan should be in use for filing F.F.A. material. If the secretary is delegated this responsibility, he should do it thoroughly and neatly. If a satisfactory filing plan is not in use, organize one to meet your local conditions. Files must be kept up to date if they are to be of value. When material has no further use, it should be removed from the files.

EXECUTIVE OFFICER

The secretary has often been called the executive officer of the chapter. He keeps the organization intact, preserves the official records, and is, in many respects, the only contact with other individuals, chapters, and state and national organizations. Therefore, his job is of paramount importance in the overall chapter work.

SECTION VI

THE JOB OF THE TREASURER

KEY MAN IN FINANCES

The treasurer is the key man in the financial aspects of any organization. In the F.F.A. chapter, a definite part of the leadership training deals with handling money and correct procedures for keeping financial records. The F.F.A. treasurer must be well trained if his records are to be accurate and if the financial standing of the chapter is to be kept on a sound basis.

The job of the treasurer will include the following functions:

1. Receive and act as custodian of all chapter funds until they are deposited in the regular school intracurricular account.
2. Study last year's accounts as a basis for making budget recommendations for the coming year.
3. Issue receipts and keep a stub or duplicate for all money received.
4. Secure a receipt for every chapter disbursement.
5. Itemize and summarize the financial operations of each activity with date and title of all transactions.
6. Balance the accounts at regular intervals and check actual cash with the official chapter record.
7. Study and discover legitimate ways of raising money for chapter activities.
8. Supply the information necessary for financial aspects of all annual and school reports.
9. Keep all records neat and up-to-date.
10. Keep a membership record showing dues paid and cards issued.
11. Take part in all chapter ceremonies.
12. Collect all dues early in the year.
13. Send to state treasurer all state and national dues.
14. Build up the financial standing of the chapter in the school and community.
15. Be prepared to report on the financial condition of the chapter at any time.

RAISING MONEY

A good treasurer will have in mind ways to raise funds for carrying out the chapter activities. Without adequate financing, an organization's activities will be greatly curbed. If one method of raising money does not come up to expectations, the treasurer should be prepared to offer other possibilities. The treasurer can also be of help in keeping the chapter members informed of developments that may affect the financial standing of the organization.

IMPROVING YOUR ABILITY AS A TREASURER

After you have become familiar with your duties and responsibilities as a treasurer, feel free to call on the school banking officer for suggestions and advice. They will generally be glad to assist you and other chapter members in problems of chapter finances and also the financing of group or individual enterprises.

A good point to keep in mind is that a financial record cannot be almost correct—it *must be correct.*

SECTION VII

THE JOB OF THE REPORTER

INFORM THE PUBLIC

The foremost job of the reporter is to keep the public informed about the activities of the F.F.A. Your parents, neighbors, school officials, merchants, and other businessmen need to know about the F.F.A. and about agriculture in general. It is commonly agreed that we have little interest in the things we know the least about. If the F.F.A. is to receive the support it needs, a continuing program of public relations must be in effect.

WRITING NEWS ARTICLES

Activities and events in which members of the local chapter take part constitute a ready source of news material. The people of your community are interested in the names

of these boys and what they have done. News must be fresh and must answer the question of who, what, when, where, and why (how). A good news article will generally give these points although not always in the order listed.

STYLE AND STRUCTURE

The two most important factors to be considered in the news story are style and structure. The style has to do with expression and can be determined by the clarity and conciseness with which the article is written. The less effort required to get the meaning of an article, the more desirable it will be. The effectiveness of the style lies in the selection and use of words that will convey the meaning intended and hold the interest of the reader. Conciseness does not mean that you should not use a sufficient number of words to retain the human interest and life of the story. However, unnecessary words only add to the pruning done by the editor. Do not be discouraged if all of your story is not used. Many factors determine what articles will be put in print on a given date.

Structure deals with the arrangement of material within the article. An emphatic beginning with a good lead paragraph will generally determine whether or not the reader continues the article. The article should be written with the most important points first, with succeeding paragraphs of lesser importance. This will enable the editor to use a part of the story if space is limited. The ABC's of writing have been spoken of as accuracy, brevity, and clarity. A good news article will meet this standard.

The following points should be helpful in making your news writing easier: include names of people taking part in activities; write your news article as simply and directly as possible; double space to allow for minor changes or corrections; spell all names correctly and identify all people by their proper titles; try to get the story first-hand if possible; express appreciation for the space allotted for your article.

Do not use excessive words; do not complain if all your article is not used—resolve to do a better job next time; do not try to do a flowery job or "doctor" up the story—simply tell the facts; do not rely on your memory for details—write them down as they happen; do not be late with a story—meet your deadline.

SECTION VIII

THE JOB OF THE SENTINEL

As stated in the opening ceremony, the sentinel is the first person to greet guests and welcome them to the chapter. Because first impressions are important, the sentinel must do a good job of meeting people and making them feel at ease. He must also take the responsibility of providing for their comfort. The ventilation, heat, and lighting must be checked to insure an agreeable meeting place. The room must be ready before the meeting is called to order. This includes getting all the paraphernalia and other equipment in place. Should any changes be necessary, make them as the meeting progresses with as little disturbance and interruption as possible. Following the meeting, the sentinel is responsible for putting the room in order.

SPECIAL ASSIGNMENTS

The sentinel is the person who aids in maintaining order and checks on other disturbances during the meeting. He is not a bouncer, but a courteous and efficient helper. He should have a reasonable knowledge of parliamentary procedure if he expects to do his job well. During initiations, the sentinel will generally take charge and serve as coordinator.

MEETING PEOPLE

Because the sentinel must introduce himself to the guests and introduce the guests to other people, he must know how to make introductions. This can be learned by practicing with other members of the chapter. The sentinel should take advantage of situations that give him experience in meeting people. He should be neatly dressed and make a good appearance. He must use proper grammar and be well-mannered in all respects. He might aptly be called the "front office" man of the local chapter. He may also assist with any entertainment and with serving refreshments if needed. If visitors arrive during the meeting, he sees that they are welcomed and introduced at the appropriate time.

SECTION IX

THE JOB OF THE PARLIAMENTARIAN

ADVISER TO THE PRESIDENT

The office of parliamentarian may be appointive or elective. Because the primary duty of the parliamentarian is to serve as the president's adviser and consultant on procedural matters, it is better if he is appointed by the president. The parliamentarian should pass his advice directly to the presiding officer and not to the assembly. He is a source of parliamentary information but it is up to the president to enforce or ignore his advice.

TACT AND DISCRETION

The parliamentarian should attempt to anticipate any questionable situation and be prepared to advise the president. If a serious error occurs in parliamentary practice, he should tactfully call it to the attention of the presiding officer. An inquiry on parliamentary procedure should be directed to the president, and then, if the president desires, it may be passed on to the parliamentarian. Needless to say, the parliamentarian must have a thorough knowledge of parliamentary procedure. In addition, he should have the necessary sources to refer to in case a decision is questioned.

HOW TO LEARN PARLIAMENTARY PROCEDURE

The best and most effective way of learning parliamentary procedure is by practice in simulated and regular meetings. Various members of the chapter should assume the chair and preside for a period of time. A knowledge of the purpose of the various motions and parliamentary practices is necessary before a desirable understanding of partiamentary procedure may be gained.

Based on *Robert's Rules of Order* — see key below

2. To move question of privilege	Y	Y	Y	Y
3. To adjourn (without date)	Y	N	N	Y
4. To take recess	Y	N	Y	Y

KEY: S—Seconded; D—Debatable; A—Amendable; MV—Majority Vote; Y—Yes; N—No; ⅔—Requires ⅔ vote for this adoption.

* Under certain conditions, exceptions to these general rules may occur. Consult *Robert's Rule of Order* or other accepted authority for these instances.

SECTION X

CONCLUSION

Election to an office in an organization implies a trust in the individual. In accepting and assuming the responsibility of an office, the member obligates himself to do the best job that he possibly can. To do this means that he must be receptive to suggestions for improvement, willing to study, and aware of the fact that the welfare of the chapter should be put ahead of the welfare of the individual member. Whether you are in a small or a large chapter, a new chapter or an old one, the degree of participation in the activities determines your growth as an officer and leader. Active participation in the chapter activities is the key to successful membership in the F.F.A.

It is only through the efforts of all officers and chapter members that an organization can do the most good. Find your place and be willing to do your part. The personal satisfactions of a job well done will be many. You will then be proud to say "I served as an officer in the F.F.A."

Survey of Pupil Interest in Three Home Economics Related Occupations: Child Care Aide, Clothing Construction Aide, Food Service Occupations.

Kentucky Univ., Lexington
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 65 2p.

*STUDENT INTERESTS; CHILD CARE WORKERS; SENIOR HIGH SCHOOLS; *OCCUPATIONAL HOME ECONOMICS; FOOD SERVICE WORKERS; *QUESTIONNAIRES; SURVEYS; VOCATIONAL INTEREST; EDUCATIONAL INTEREST; SEAMSTRESSES; *SERVICE WORKERS

This instrument was developed to determine the interest in several possible occupational home economics programs. The questionnaire was designed to survey the need for the establishment of courses for those interested in the occupations of child care aide, clothing construction aide, or worker in the food service occupations. Students were given an opportunity to indicate an interest, a desire for more information, an indecision, or no interest in the program. Specific questions in each of the three subject areas were used to determine the student's experience in those areas. (MS)

Survey of Pupil Interest in Three Home Economics Related Occupations: Child Care Aide, Clothing Construction Aide, Food Service Occupations

What are your plans after high school? Are you planning for college, marriage, or getting a job? If it is employment you want, how well prepared are you to get and hold a job? Are you trained in any skills which qualify you for entrance in a career? Perhaps here is what you've been looking for. A training program in Home Economics related occupations is being considered in this school. There is a possibility that a course will be offered next year in one of the following careers for which the most interest is shown.

The Child Care Aide is a person specially trained in understanding and dealing with children and in techniques of caring for children. She is prepared for child care jobs in private homes or in group care centers where she works under the direction of professional child care personnel.

The Clothing Construction Aide is a person who has skills and interests in clothing construction repair and alteration. She performs these and other jobs under the supervision of a qualified, experienced seamstress in an apparel store, dry cleaning establishment, dressmaking or tailoring shop.

Food Service Occupations is a general term covering several jobs for persons who work with food in public eating places. These jobs have special titles as hostess, waitress, cafeteria server or lunch-counter waitress, to mention a few. Workers in these jobs need training in food preparation and service and public relations if they are to be successful on the job.

From these descriptions which occupation do you think you would like best? (check one)

_____ a. Child Care Aide

_____ b. Clothing Construction Aide

_____ c. Food Service Occupations

To help with the planning for these courses, would you answer these questions:

1. If a class were offered at school to prepare you for the job which you checked, would you be interested in taking this class? (check one)
   _____ a. Yes, I am definitely interested
   _____ b. I am interested, but want more information
   _____ c. I am not sure
   _____ d. No, I am not interested
2. Would you like to go into this kind of work after you get out of school? (check one)
   _____ a. Yes, I am definitely interested
   _____ b. I am interested but want more information
   _____ c. I am not sure
   _____ d. No, I am not interested

VT016 3

3. Check the Home Economics courses you have had:

_____ a. 7th and/or 8th grade Home Economics

_____ b. Home Economics I

_____ c. Home Economics II

_____ d. Home Economics III

_____ e. Home Economics IV

_____ f. Family Living or Special Home Economics course

4. In the space at the left check the statements which apply to the experiences you have had in sewing. Please list sewing experiences in the space provided.

_____ a. I have made complete garments for myself (list types of garments made _____)

_____ b. I have made garments for other people (list types of garments made _____)

_____ c. I have repaired my own clothing (list repairs _____)

_____ d. I have repaired clothing for others (list repairs _____)

_____ e. I have altered my own clothing (list types of alterations _____)

_____ f. I have altered clothing for others (list types of alterations _____)

_____ g. I enjoy sewing for myself and others

5. In the space at the left check the statements which apply to the experiences you have had with children:

_____ a. There are younger children in my family and I am sometimes responsible for them.

_____ b. I have cared for children at church.

_____ c. I have cared for children for pay.

_____ d. I have observed children at school, in my neighborhood, etc.

_____ e. I have worked with children in scouts, camps or other organized activities.

_____ f. I enjoy working with children.

6. In the space to the left check the statements which apply to the experience you have had in working with food:

_____ a. I often prepare snacks and meals for my family.

_____ b. I have helped serve meals to large groups.

_____ c. I have had part-time or summer jobs in some phase of food service.

_____ d. I have worked in the school cafeteria.

_____ e. I enjoy working with food.

FOREWORD

In our system of private enterprise and competition there is a need for a program to develop an understanding of the social and economic responsibility of those engaged in distribution and to make the student aware of the various job opportunities in this field. A program of instruction called Distributive Education enables the student to learn and earn by spending part of the day in class and part of the day on the job. The Distributive Education program is designed to provide balanced, comprehensive, instructional programs in all areas of distribution and marketing.

Grateful appreciation is expressed to members of the State Department of Education for their help in the organization and implementation of this program; to the administrators and teacher-coordinators of the Jefferson County School System who are carrying out the details; and to the many business leaders who play a major role in its support.

Richard VanHoose
Superintendent
Jefferson County Schools

INTRODUCTION

As our society becomes more industrial and urban in character, schools are being called upon to do a more thorough job of developing human resources. Every young person needs an education that meets his needs and abilities, whether he plans to continue his education in college, become a skilled worker, or enter semi-skilled employment. For many boys and girls supervised work experience, with the challenge of an actual job, demonstrates the importance of their formal education.

By working in actual situations, while at the same time they are enrolled in high school courses leading to graduation, these young people find it possible to explore job opportunities open to them and to develop personal initiative, responsibility, and self-confidence.

Distributive Education embraces the fundamental goals which apply to all teaching. These goals have been stated as follows: to encourage, to enable, to enrich, and to ennoble. The pursuit of these goals develops in the student the qualities needed for employment in distribution and marketing--imagination, initiative, and innovation.

The employer has not as yet clearly identified specific preparatory skills basic to successful pursuit of a career in distribution. Observation and experience have revealed the importance of personality and social fitness as well as the academic skills necessary for communication, a facility in the elemental processes of mathematics, and a degree of economic literacy.

Personality and social fitness are essential in any career, but are particularly important in the field of distribution and marketing because of the dependence upon personal contacts in these fields. The student who is preparing for a career in distribution must realize how greatly job opportunities are conditioned by his ability to work cooperatively with others.

He must develop the ability to make sound judgments and become aware of the importance of ethical behavior.

Because of the comparative newness of cooperative work-experience education in Jefferson County, coordinators, employers, and school administrators have suggested the need for a manual outlining, in some detail, many of the important aspects of initiating and supervising a program in Distributive Education.

The development of this guide is the result of the cooperative effort of the Jefferson County distributive education coordinators, of administrative personnel of both the Jefferson County School System and of the State Department of Education, and of leaders in business in Jefferson County.

This publication is not intended to serve as a directive in any final sense; however, it is hoped that it will be useful as a ready source of accepted procedures by the coordinators and those concerned with the development of this area of public vocational education.

INTERPRETATION OF THE DISTRIBUTIVE EDUCATION PROGRAM

Objectives

The distributive education program has for its major objective the fitting of the student for a career in distributive education.

Specific objectives are given below.

To develop the ability of distributive workers to give intelligent, economical, and helpful service to consumers

To develop greater job satisfaction

To increase earning power

To insure advancement on merit

To create a feeling of permanency of employment

To reduce business losses due to inefficient employees as well as to unsound management policies and practices

To develop among employers, employees, and consumers a wider appreciation of the value of trained personnel

To develop a closer tie between the school and the business community

Student

Distributive Education, commonly referred to as DE, identifies a program of vocational education. A distributive education student learns and earns in the program by spending a part of the day in classes and part of the day on the job.

A student enrolled in Distributive Education in the Jefferson County School System must be sixteen years of age or older. He should have an average scholastic standing, a satisfactory attendance record, good character references, and a pleasing personality and appearance. A declared career objective is required and must be clearly defined to the teacher-coordinator as well as to the sponsor-employer. He must carry his required classes while working at a distributive occupation.

The student is allowed to leave school to go to his place of employment after he has completed his required classes, usually at the end of the fourth period; however, he is considered under school supervision throughout the regular school day.

The working hours are regulated by federal and state laws governing the amount of time a student may work. There are special provisions in the Kentucky labor law regarding Distributive Education students. These provisions are as follows:

> A student employed under the distributive education program may be employed as much as 35 hours per week, instead of being limited to 28 hours per week as provided by the Kentucky Child Labor Law for minors 16 and 17 years of age who are attending school.
>
> The Attorney General's opinion dated December 31, 1956, refers to the time spent on the job for which the student receives school credit as 'school induced periods'. Therefore, the time during which the student would be in school, but which is spent instead in on-the-job training, does not count as working time for the purpose of the Child Labor Law.
>
> It is our understanding that the student is excused from school for three hours a day to work on the job as part of his distributive course, and he must work 15 hours a week to earn his credit. Under the provisions of the Child Labor Law, a minor is permitted to work four hours a day making an over-all seven hour day and 35 hours per week for five days. If the student works on Saturday, then the hours worked on week days would have to be less than seven.[1]

During the school year the student must complete a minimum of 540 hours of successful employment in order to receive the designated amount of credit for the course. The employer and the teacher-coordinator together determine the progress of the student. Changes in attitude, improvement of skills, development of habits, and acquisition of knowledge will be a basis for measuring the growth and development of the student.

---

[1] James H. Sandlin, Director, Department of Labor (letter to Robert M. Talbott, Assistant State Supervisor Distributive Education, September 22, 1965).

To remain in the program, a student must be employed and should be working within a reasonable length of time after the beginning of the school year. The DE teacher-coordinator will have the student secure the required work permits, and MUST approve the student training station.

The DE student is required to work. The employer, however, is under no obligation to continue the employment of any student proving to be an unsuccessful worker.

Operational Procedures of Cooperative Classes

Preparatory part-time cooperative classes, providing supervised work experience on the job, shall be organized according to one of the following plans:

(a) Type A classes may cover 2 school years and provide an average of 1 class period (60 minutes) per day for vocational instruction in distribution at the school and not less than 15 hours of employment per week in a distributive occupation for supervised work experience. The school year shall be at least 9 months in length.[2]

Class Period 1	2	3	4	5	6
DE-I or DE-II or Requirement	DE-I or DE-II or Requirement	DE-I or DE-II or Requirement	Requirement or Elective	Co-op	Co-op

A junior should take DE-I and the requirements as shown in the schedule above during the first four periods of the school day to enable him to proceed to his training station at the end of the fourth period.

First period	DE-I	Fourth period	Requirement
Second period	DE-II	Fifth period	Co-op
Third period	Requirement	Sixth period	Co-op

A senior should take DE-II and the other requirements as shown above, and then proceed to his training station.

---

[2]Kentucky State Plan for Vocational Education. (Frankfort, Kentucky: State Board of Education, revised 1964).

The DE teacher-coordinator should be assigned a schedule that will free him from the classroom or from duties confining him to the building by the end of the third period. This provision permits the teacher a flexible program allowing time for cooperation with the employer.

> (b) Type B classes may cover 1 school year of at least 9 months and provide an average of 1 class period (60 minutes) per day of vocational instruction in distribution at the school and not less than 15 hours of employment per week in a distributive occupation for supervised work experience. Class enrollment shall be limited to part-time cooperative students who have completed at least 2 high school units of credit of [4] semesters in distributive subjects.[3]

Class Period 1	2	3	4	5	6
DE (Srs. only) 2 Prerequisites required	Requirement or DE	Requirement or DE	Requirement	Co-op	Co-op

The type B program is provided for Seniors only if they have completed two prerequisites.

Employer

In order to secure satisfactory employment for the student the teacher-coordinator, in many instances, must make repeated calls on the businessman in order to interpret the program to him and in order to secure desirable training stations.

After desirable training stations are secured the employer will recognize the following statements as facts.

> The Distributive Education program in the secondary school is a cooperative plan of action between the school and the business employing a student during half of his school day.
>
> Learning occurs both at school and on the job. Much classroom work is based on suggestions and ideas obtained from discussion with employer, rating sheets, and needs of the student.

[3] Ibid.

The success of the Distributive Education program depends primarily upon cooperative effort on the part of the school administration, the employer, the student, and the coordinator.

Training stations must be carefully selected. Various committees have developed, through studies, a consensus of opinion regarding standards for training stations. A satisfactory job situation displays the following characteristics:

The owner, operator, or manager must be willing to enter into a cooperative training program. He should enjoy working with young people and be open-minded, patient, friendly, and helpful.

The training station should have adequate equipment and kinds of work experience to provide all-round training for the student.

The type of training secured on the job will make it possible for the student to use this training and experience in securing permanent employment upon graduation.

The business should be a permanent organization rather than one of a transient nature.

The merchandise or services sold should be of a nature that will not corrupt the morals of the student.

Adult sponsors should be present in a supervisory position when the student is on the job.

The business should provide part-time employment for the student throughout the school year.

The owner, manager, or operator of the business must be willing to cooperate in the training program for the student as outlined by the teacher-coordinator.

The owner, manager, or operator must be willing to submit periodic reports as to the progress of the student on the job.

Training stations must be located in areas that are accessible under normal avenues of commuting to and from work.

The training station should provide hours of employment in keeping with normal hours of business operation and in accordance with health standards for high school boys and girls.

The business should have a good reputation and be favorably accepted by the community.

An unsatisfactory job situation displays the following characteristics:

Training stations that lead to dead-end jobs

Training stations that cannot provide rotated work experience

Training stations in which the sponsor refuses to allow the student a reasonable opportunity for experiences that provide increased knowledge or skill

Business or services managed by persons with questionable moral character

Training stations that cannot provide continuous work experience during the school year

Training stations that offer undesirable hours of employment for high school youth (The student has responsibilities also to other classes in school, his home, and church life.)

Business or services located in an undesirable section of the city, or that can be reached only by traveling through undesirable sections

Business or services managed or operated by tyrannical types of persons

Business or services managed or owned by relatives of a student (Such situations should be avoided but are not prohibited.)

Business or services that demand too many hours of work on the part of the student each day or each week (The student's hours are governed by labor laws.)

Business or services that demand more maturity in selling skills and abilities than those possessed by high school boys and girls

Training stations that provide unhealthy, physically unsafe, or dangerous working conditions

Business or services that exploit the student in any way

Teacher

The Distributive Education teacher-coordinator is engaged in many activities. These activities call on him to be a combination of business education teacher, guidance counselor, personnel manager, and adult educator. In addition to this he must perform duties required of all regular staff members, so long as these activities do not interfere with the operation of the Distributive Education program.

The Jefferson County School System in conjunction with the Certification Division of the State Department of Education sets forth the following standards for the Distributive Education Coordinator in Jefferson County:

> He must be a graduate of an accredited four year college or university.
>
> He must have completed or be in the process of acquiring sixteen hours of college credit in distributive education. These courses include Principles and Philosophy of Vocational Education, Teaching Methods in Vocational Education, and Trade Analysis. In addition to the required degree and required subjects necessary for certification, the DE teacher must attend a two-week in-service training program at some accepted college or university in the state each summer in order to be currently informed of program changes.
>
> The Distributive Education teacher is required to furnish proof that he has been successfully engaged in a distributive occupation for a period of at least three years, regardless of any teaching experience. This employment must not include any teaching experience.
>
> All coordinators must be approved by the State Director of Distributive Education.
>
> All teachers must have their certificates reviewed and renewed at the beginning of each school year.

A follow-up study is made each year in order to ascertain the degree to which the student has benefitted from participation in the program. This service is performed by the DE teacher-coordinator by means of a thorough inquiry into the current employment status of students who have graduated from the DE program.

Geographic Area

The following plan has been verbally agreed upon by the coordinators of the eight Jefferson County Schools where Distributive Education programs are in operation:

> Each teacher has agreed that he will actively seek acceptable training stations in his own geographic school district; however, this does not restrict employment to this area alone. If a student, on his own resource, obtains a job in another location, this is acceptable.
>
> Reasons for this plan are:
>
> Transportation for the student often is costly, time consuming, and possibly even hazardous when great travel distances are involved.
>
> Saturation of certain shopping areas causing the employer to become involved with too many students from too many schools MUST BE avoided.

Advisory Committee

In May, 1962, the first Jefferson County Distributive Education Advisory Committee was organized with approximately twenty-five guests present. These invited guests included two employer advisory members from each Jefferson County School participating in the DE program, certain administrative personnel, and all Distributive Education teachers.

This group is still active and meets at least one time during each school year with teachers and administrators. Many ideas emanating from these meetings are presently being used in the classrooms by the DE teachers in the Jefferson County School System.

The foremost function of this committee is to serve as a liaison between the school system and the business community. Cooperation of this nature will help to achieve conditions that will be beneficial to the education of the student.

Facilities

Back in the days when distributive education was primarily a job training program, classroom facilities did not seem as important as they are today. But times have changed. The restricted job-training program objectives of ten to twenty-five years ago have been replaced by long-range, student goals oriented toward an established career.

Not only have program objectives changed, but so have instructional techniques. Greater use is being made of role playing, student demonstrations, teacher demonstrations, audio-visual materials, individual occupational study guides, and programmed instruction. Some of these learning activities require a classroom atmosphere simulating that which the student faces in his daily on-the-job experiences; others call for special equipment. The opportunity to master skills in salesmanship, display, care of stock, and good housekeeping, as well as the accumulation of essential business knowledge and the development of attitudes can be enhanced if appropriate facilities are available and are properly used.

Consideration should be given to the flexibility of the use of all equipment. Whenever possible, the equipment should be movable. Size is often an important factor. Each article should be attractive and fit into the decorative scheme of the room or department. Also, it should be up-to-date since good instruction is difficult with outdated equipment.

In order to establish a base from which all program activities can be conducted, office space for the distributive education coordinator is necessary. There should be the usual equipment such as desk, chairs, typewriter, filing cabinet, book shelves for reference materials, and a telephone for business and student contacts.

In the teaching area tables and chairs or desks should be provided for the students. It is also suggested that there be a cash register, a counter

and a wrapping station, and a showcase that can be used in teaching display work.

In the final analysis it must be realized that there is no exact prescription for determining the proper kinds and amounts of facilities needed for a program of a given size. Built-in variables make standard recommendations impractical. Therefore, careful planning at the local level becomes a necessity.

DISTRIBUTIVE EDUCATION CLUBS OF AMERICA

DECA is the national organization to which all Distributive Education students and coordinators belong. The identifying letters DECA refer to the title Distributive Education Clubs of America.

Purposes

To develop a respect for education in marketing and distribution which will contribute to vocational competence

To promote understanding and appreciation for the responsibilities of citizenship in our free, competitive enterprise system

DECA seeks to achieve its purposes by creating interest in all phases of marketing and distribution study, and serving as an avenue of expression for individual talent.

Distributive Education instruction and Distributive Education Clubs of America activities constantly emphasize the American system of competition and private enterprise. History has proven that whenever a nation's channels of distribution fail to function, that nation is shortlived. As DECA attracts more of our nation's youth to study marketing and distribution, the total DE program becomes a vital necessity to our national security.

Organization

Within the structure of DECA organization there are three divisions; the activities of each of these are interdependent upon and interrelated with each other.

The local chapter. Membership in this division is composed of the DE students from an individual school. Each chapter elects its own student officers and the teacher-coordinator of that school serves as Chapter Advisor.

Activities of a chapter include all of the activities in which the chapter participates at the state and national levels as well as employee-employer banquets, and fund raising for scholarships. Recipients of awards resulting from contests and competition within the local chapter are eligible to participate at the state level.

The state association. All chapters within a state comprise a State Association of DECA, which is under the leadership of the State Advisor. Each state association elects its own student leaders. Each year a State Leadership Conference is held for all DE students and coordinators. Opportunities that are available to each individual student, according to his own particular interests and abilities, are various contests featuring specific phases within the areas of retailing and distribution. Examples of such contests are advertising layout, sales demonstration, public speaking, window display, job interview, merchandise manual, chapter activities manual, and others. Competition is offered to students from all chapters in the state. As a culmination of these events, the state winners are sent to the National DECA Conference, under the sponsorship and supervision of the state association. Expenses are paid by the State Association with monies received from various participating organizations and adult supervision is provided by teacher-coordinators. Each student is also granted special insurance coverage for the duration of this trip.

The national association. This division of DECA is composed of membership of all state associations. At the present time forty-nine states and Puerto Rico hold membership in DECA. Each spring a four day National Leadership Conference is held. Each state that offers Distributive Education to students enrolled in public high schools or post secondary schools may send delegates to the National Leadership Conference. Attendance at this conference is composed of delegates from each state who have achieved this honor through competition at the state level.

From the correlation of the activities of DECA as described in the preceding paragraphs, the reader can see that each and every Distributive Education student has an opportunity, commensurate with his individual interest, ability, and effort, to achieve leadership and recognition in a national capacity.

By participating in the Distributive Education program, the student has opportunity to cope with immediate needs as well as to make preparation for a satisfactory career in marketing, management, personnel, salesmanship, advertising, insurance, private business, teaching, and many other related occupations.

History

The first Interstate Conference of Distributive Education was held in Memphis, Tennessee, April, 1947. The second National Leadership Conference was in 1948 at St. Louis, Missouri, at which time a constitution was adopted along with the official name.

Seventeen charter member states were involved, one of which was Kentucky. Since there was a limited number of high schools who offered distributive education as a course of study in their curriculum, it was decided that a state organization would be developed. It was also decided not to affiliate with the national organization until more students in high school could be involved.

In 1962 a meeting of twenty-five distributive education teacher-coordinators was held at the University of Kentucky, under the leadership of Dr. W. Maurice Baker, teacher-trainer of distributive education at that institution. It was decided by the majority that the time was right to establish affiliation with a national organization.

It is interesting to point out the fact that, in 1947, the national membership was 800 pupils, while for the school year 1964-65 the national membership was established at more than 50,000. The number of state associations affili-

ated with this national youth movement has increased to forty-nine plus Puerto Rico. The growth and development of DECA has been rapid. Many interested educators and business organizations have given their advice, their cooperation, and their support. Past growth and future plans give every indication that DECA is destined to become one of the leading youth organizations of our time.

In the school year 1964-65 DECA membership in Kentucky showed the totals of 993 for the high school division and 2176 in the adult (post secondary) division.

For the school year 1965-66 there are thirty-seven high school programs and six adult programs of Distributive Education in the state of Kentucky. The Jefferson County School System offers eight Distributive Education programs at the present time. These are located in the following schools: Butler, Durrett, Fairdale, Pleasure Ridge Park, Southern, Thomas Jefferson, Valley, and Western.[1]

THE DISTRIBUTOR'S CREED

I believe in the future which I am planning for myself in the field of distribution, and in the opportunities which my vocation offers.

I believe in fulfilling the highest measure of service to my vocation, my fellow being, my country and my God--that by so doing, I will be rewarded with personal satisfaction and material wealth.

I believe in the democratic philosophies of private enterprise and competition, and in the freedoms of this nation--that these philosophies allow for the fullest development of my individual abilities.

I believe that by doing my best to live according to these high principles, I will be of greater service both to myself and to mankind.

THE EMBLEM OF THE DISTRIBUTIVE EDUCATION
CLUBS OF AMERICA

SYMBOLISM OF THE FOUR POINTS OF THE DIAMOND

Vocational understanding. Distributive Education students have an understanding of various distributive occupations, types of business and merchandise, of service rendered, and performance expected in working with others, plus opportunities available.

Civic consciousness. Distributive Education students learn to recognize obligations to community needs, planning worthwhile projects, and serving on committees for community betterment.

Social intelligence. Distributive Education students have opportunities to develop socially. Social events planned, financed, and executed by club committees provide ample opportunity for the student to gain an understanding of what is socially acceptable.

Leadership development. Distributive Education students have many opportunities to participate in group activities in which they learn to assume responsibility and to serve in the capacity of both leader and follower.

SYMBOLISM OF THE WRAPPED PACKAGE

The wrapped package symbolizes the close cooperation of student, teacher, parent, and merchant in assisting Distributive Education students to acquire a well-rounded education.

D I S T R I B U T I V E E D U C A T I O N C L U B S

O F A M E R I C A

STATE CONSTITUTION

ARTICLE I----NAME

The official name of this organization shall be the "Kentucky Association of DECA" (Distributive Education Clubs of America)

ARTICLE II----PURPOSES

The purposes of this organization shall be:

.... To assist local chapters in growth and development of DECA

.... To develop competent leadership among its members

.... To promote understanding and appreciation for responsibilities of citizenship

.... To encourage the use of high ethical standards in business and industry

.... To provide for mental, physical and moral growth through social and recreational activities

.... To further develop a respect for education in marketing and distribution

ARTICLE III----ORGANIZATION

SECTION 1 The Kentucky Association of DECA is an organization of local member chapters in the secondary schools of the State of Kentucky, each chapter operating in accordance with the charter granted by National DECA.

SECTION 2 The administration of the Kentucky Association of DECA will be vested in the Board of Governors of this organization.

SECTION 3 The Board of Governors shall consist of:

- The state advisor of the Kentucky Association of DECA
- The president of the DE Teachers organization
- The secretary of the DE Teachers organization
- The chapter advisor of any state officer
- The executive council which consists of all state DECA officers

SECTION 4 The state advisor shall serve as chairman of the Board of Governors. The president of the state teachers organization of DE shall serve as advisor in his absence.

SECTION 5 The chairman of the Board of Governors shall be empowered to call meetings and appoint committee chairmen. The Board of Governors shall be empowered to carry out all activities of the Kentucky Association of DECA.

SECTION 6 The coordinator of each student committee chairman shall automatically become advisor to that committee.

ARTICLE IV----MEMBERSHIP

SECTION 1 Membership of the Kentucky Association of DECA shall be individual members of the DECA chapters, associate members, professional members and honorary life members.

SECTION 2 The classes of these memberships shall be recognized as follows:

Active Members----------Students who are enrolled in a high school program, and have paid established local, state and national dues. They will be eligible to hold state and national office, participate in contests and serve as a voting delegate

Associate Members-------Students enrolled in participating classes which are considered a part of the DE program approved by the state. They will pay established dues, but will not be eligible to hold office, participate in contests or serve as a voting delegate.

Professional Members----Persons associated with DECA. May include the Teacher-Coordinators, Advisory Board Members, Employers, former DECA members or other interested persons. They will pay the established dues, but will not be eligible to hold office, participate in contests or serve as voting delegates.

Honorary Life Members---May be individuals who have made a special contribution to the DECA program and who have been approved by the Board of Governors.

ARTICLE V----VOTING

SECTION 1 Member chapters shall exercise their voting privilege through voting delegates at the state leadership conference. Each local chapter shall be allowed two voting delegates for membership up to twenty-five and one additional delegate for every additional ten members or fraction thereof. No chapter will be allowed more than four voting delegates. Each voting delegate shall be entitled to an individual vote.

ARTICLE VI----MEETINGS

SECTION 1 A state leadership conference shall be held each year with the time and place selected by the Board of Governors. It shall be the official annual meeting.

SECTION 2 Parliamentary procedure of all meetings will be guided by "Robert's Rules of Order, Revised".

ARTICLE VII----OFFICERS

SECTION 1 Officers for the Kentucky Association of DECA shall be elected by majority vote of the voting delegates at the annual meeting of the State Leadership Conference, and shall consist of President, Vice-Presidents (First and Second), Secretary, Treasurer and Historian-Reporter. This collective group shall be known as the Executive Council.

ARTICLE VIII----FINANCES

SECTION 1 Individual chapters will be responsible for the collection of State and National dues. This amount will be payable on or before November 1 of each school year.

SECTION 2 The Board of Governors shall control all finances of the Kentucky Association of DECA.

SECTION 3 The accounts of the outgoing treasurer shall be audited each year by an auditing committee selected by the Board of Governors.

SECTION 4 The treasurer shall report to the Board of Governors, on or before December 1, each year, those whose membership dues are fully paid. These chapters will be considered Chapters in Good Standing.

ARTICLE IX----DELEGATES

SECTION 1 The number of delegates to the National Leadership Conference shall be variable in accordance with the National constitution.

SECTION 2 The incoming state president, the first place contest winners and their advisors are automatically considered delegates. The state association will pay the expenses of the president and the contest winners, but not necessarily the chapter advisors. Those who make up the remaining number of delegates shall be the decision of the Board of Governors. The chapter advisors who will attend the conference, having their expenses paid by the state association, shall be selected as follows:

..One woman teacher for each five girl students or fraction thereof.
..One man teacher for each five boy students or fraction thereof.

..To be selected alphabetically with incoming teachers, after June 15, 1965, being placed at the end of the list.

..Teachers who have served as advisors, having their expenses paid by the state association in 1963, '64, and '65, will be placed at the end of the list for the 1966 National Conference, as paid delegates. This procedure shall be followed each succeeding year.

..If a teacher advisor fails to take advantage of his opportunity he may be considered, as a delegate advisor, the following year.

SECTION 3 Teacher coordinators shall submit to the Board of Governors within one week after the state leadership conference, names of students who would like to be considered as delegates to the National Conference.

ARTICLE X----AMENDMENTS

SECTION 1 This constitution may be amended by two-thirds vote of the authorized voting delegates at any annual State Leadership Conference of the Kentucky Association of DECA.

SECTION 2 Only such amendments shall be made as in keeping with the purposes stated in Article II of this constitution.

SECTION 3 Recommendations for amendments shall be in the hands of the Board of Governors for consideration one month before the annual State Leadership Conference.

*SERVICE OCCUPATIONS; *EMPLOYMENT OPPORTUNITIES; *OCCUPATIONAL SURVEYS; *EMPLOYMENT TRENDS; OCCUPATIONAL CLUSTERS; MANPOWER NEEDS; EMPLOYMENT PATTERNS
SAN FRANCISCO BAY AREA

A study of employment trends in some of the service occupations in this area shows that increases in employment should be most rapid in finance, insurance, real estate, legal, educational, medical, and health occupations. The labor demand should be more in favor of the white collar workers, professional, managerial, clerical, and sales worker, with the professional and technical occupations accounting for more than 25 percent of the Bay Area employment growth in highest demand. Currently there is a persistent demand for well qualified persons such as registered nurses, vocational nurses, secretarial, clerical, and sales workers, bank tellers, title examiners, accountants, computer programers, systems analysts, social workers, group workers, case workers, registered dietitians, x-ray technicians, physical therapists, engineering aides, and precision machinists. Included in the study for most occupations are salaries, training needed, advancement information, job titles, and declining job opportunities. Indications are that the service occupations which will be in short supply in the future are those which require more extensive and difficult periods of training. (MS)

EMPLOYMENT TRENDS IN SELECTED SERVICE OCCUPATIONS IN THE SAN FRANCISCO BAY AREA

INTRODUCTION

This is a study of employment in some of the service occupations in the San Francisco Bay Area which are appropriate for vocational-technical education programs in the high schools and junior colleges. The data used in the study were obtained largely from reports of the California State Department of Employment and the Bureau of Labor Statistics of the United States Department of Labor. Contacts have been made with professional associations, trade associations, government agencies, labor unions, private employment agencies, and private employers. These data were gathered during school years 1963-64 and 1964-65.

PROJECTED EMPLOYMENT TRENDS

IN THE SAN FRANCISCO-OAKLAND BAY AREA COUNTIES

Fields of Most Rapid Growth

Forecasts of total civilian employment indicate a continued increase in job opportunities in the San Francisco-Oakland Metropolitan Area. Employment in government, service occupations, manufacturing, and trade are expected to add the largest numbers to the work force during the next several years. The fastest rate of growth, however, will occur in the finance, insurance, real estate, legal, educational, medical, and health occupations.

A study of Manpower Resources in the Bay Area from 1960 to 1970 published in 1963[1] pointed out that the fastest-growing element in the San Francisco-Oakland economy in the next few years would be occupations in the area of finance. Employment in these occupations will continue to increase rapidly as a result of the volume and complexity of financial transactions, the rising levels of income, and the growing needs of an expanding population for financial services.

The rate of growth in government will be second only to that of finance. The bulk of this increase will stem from the need to provide a wide range of services for a growing population. State and local governments will account for about eight out of ten new jobs created in government. As in recent years, the educational system will account for the largest number of these new jobs.[2]

Employment in the service industries will also expand at a faster rate than total employment in the Bay Area. The service industries will benefit from a growing and affluent population with both the money and the inclination to use the myriad services offered by these industries. Employment trends among the component industries will vary: payrolls in motion pictures, for example, are likely to continue their long-term decline; personal services - laundries, beauty shops, shoe repair services - are expected to record only a small increase. On the other hand, rather rapid growth is forecast for recreation and amusement industries and for most of the professional and semi-professional service industries. Legal services, for example, will expand more than twice as fast as total civilian employment. Medical and health services and private educational services will also increase at a faster rate than total employment. Business services are expected to show a very sharp rise in payrolls. The increase here will be generated primarily by growth of the research and development firms that have sprung up around Bay Area universities in the past decade.

[2] Ibid., p. 14.

Composition of Needed Labor Force

Generally speaking, the composition of labor demand in the years immediately ahead will be weighted in favor of the white collar workers - professional, managerial, clerical and sales workers - since about two out of three new job openings will occur in these occupations. The reason for this heavy demand is that white collar workers are heavily represented in industries where the most rapid employment growth is expected.

White collar workers, for example, comprise more than 90 percent of the work force in finance and about 60 percent of all workers in services and in public administration, where much higher than average employment gains are anticipated. Even in manufacturing, where about 38 percent of all employees are in white collar occupations, some of the faster-growing industries have almost half of their work forces in white collar occupations such as clerical, research, and engineering. Generally speaking, in industries where only moderate employment growth is projected for the years ahead, white collar workers make up a relatively small proportion of the total work force.

Within the white collar group, the fastest rate of growth will be registered by the professional and technical occupations followed by the clerical occupations. The latter occupations, however, will record the largest net increase in employment. Managerial occupations are expected to show the slowest growth rates in the white collar field and the smallest net increase in employment.[3]

Demand for professional and technical workers will increase proportionately more than for any other group of occupations and will account for over 25 percent of Bay Area employment growth. These workers now constitute over 15 percent of the local labor force compared with 12 percent nationally, and although the demand for these workers will rise rapidly throughout the nation, the Bay Area is expected to continue its lead over the national average.

The current job picture in the Bay Area counties indicates a persistent demand for well qualified persons in the following categories: registered nurses, vocational nurses, secretarial, clerical and sales workers, bank tellers, title examiners, accountants, computer programmers, systems analysts, social workers, group workers, case workers, registered dietitians, x-ray technicians, physical therapists, engineering aides, and precision machinists.[4]

Our observations up to this point regarding the labor market have been somewhat general. In order to get an accurate picture of both quantitative and qualitative needs, it is necessary to study each of these rapidly expanding and changing fields in greater depth.

EMPLOYMENT IN FINANCE

The San Francisco Bay Area is the West Coast headquarters for financial institutions of all kinds including the insurance industry.

The largest percentage increase in employment recorded in the Bay Area took place in finance, where employment rose to 81,800 in 1962 or 53% above the 1950 level. The reason for the increase was the extension of banking services and facilities as banks followed the population to the suburbs.[5] The expansion of branch offices has been heavy for banks, insurance companies, and savings and loan companies.

Changing Occupational Patterns in Finance

While banks and insurance companies of all types are expanding rapidly, their occupational patterns are being changed radically by modern technology. At the same time that these financial institutions are searching for qualified administrative and technical personnel, their automated systems are doing away with traditional bookkeeping and posting functions.

The manpower studies of banks and insurance companies point out specifically the areas of occupational growth and decline with some appraisal of needs for the years ahead.

Several factors will bring continued employment expansion to the banking industry in Alameda and Contra Costa counties. The most important element is the opening of new offices in the suburbs. Many of the new branches offer drive-up and sidewalk banking services and on-the-spot parking facilities. Along with increased customer facilities has come an increasingly competitive atmosphere in the banking industry, resulting in a much larger range of services (investment counseling, trust fund management, credit cards, check reconciliation services, and freight payment plans) beamed to a mass market. Consequently, banks have rapidly increased their staffs of trained administrative and managerial personnel.

Employment in Bay Area banking is expected to increase over the next few years, although not at the rate which yielded a 50 percent increase from 1952 to 1962. Decreased needs for clerical workers recruited at the high school graduate level will be offset by need for new administrative and technical personnel to staff new bank services and suburban locations. Recruitment emphasis and employment growth will center on occupations requiring considerable training, education, judgment and skills in interpersonal communications.

It appears that banking now uses the full range of advertising media and "hard sell" techniques of other industries - a sharp contrast with the austere professional approach that is still common in the medical and legal professions.

---

[5] Manpower Resources, Loc. Cit., p. 11.

While banks are expected to continue their expansion during the next few years, the rate of employment growth will slow down because of the spread of data processing equipment. As a result of automation, routine clerical jobs are fast disappearing and recruitment is directed toward workers with higher skills and educational attainments - data processing equipment personnel and management trainees. A casualty of bank automation is the traditional bank bookkeeping job market for male high school graduates. This job market appears to have been preempted by the machine and by housewives working part-time to supplement their family income. This indicates that this changing manpower demand has an effect on the high school and junior college curriculum.

The introduction of large scale automation into banking displaces bookkeeping staff and substitutes some key punch and tabulating equipment operators, who later become unnecessary as electronic scanning devices and standardized input are introduced. Some banks have not made high school graduation a requisite and have given no screening tests for entry jobs. But with electronic data processing there is more emphasis on service at the window. Consequently, there is now a new type of "professional teller," qualifications for which put a greater premium on ability to meet and handle the public. Better education and a higher degree of maturity call for something more than a recent high school graduate. The junior college is becoming the major source of supply.

No boys just out of high school are hired; their former machine bookkeeping jobs have been taken over by electronic data processing. The lower-level jobs in banks are usually filled by women, and there appears to be little promotional opportunity for routine workers in banking. Tellers may aspire to the post of lending officer in the branch. Some upgrading is possible in those institutions where workers may progress to the level of reconcilers - people who recognize errors and know what to do about them.

Jobs in Banking

Two main classifications of banking jobs are mutually exclusive.

1. Clerical, primarily women, often hired by local branch manager

2. Technical, managerial and administrative occupations, primarily men, chiefly hired by headquarters offices.

Continuous demand is reported by the employment service offices for keypunch operators, tellers, stenographers, clerk typists, check proof machine operators, and general clerks.

Entry jobs in local banks consist chiefly of teller trainee, bookkeeping machine operator, clerk typist, stenographer, file clerk, mail clerk, messenger, secretary, accounting clerk and management trainee.

Professional workers from a wide range of fields are employed by the banking industry. The following listing gives a cross section of the higher level banking jobs listed in the local offices of the Department of Employment: programmer, business service systems analyst, research analyst, travel auditor, accountant, economist, personnel manager, procedure writer, and

salesman-auto contacts. However, since banks promote to many jobs from within the organization, most administrative or specialized banking jobs may never appear among local office job orders.

Banks also employ large numbers of lawyers, engineers and experts in banking operations such as trust officers and financial and investment advisors. With the introduction of electronic data processing equipment, banks are increasing their demands for trained programmers, data processing analysts, and other professional level data processing personnel. In the next few years, these latter occupations will be the fastest growing occupations in the industry.

Hard-to-fill jobs often run the gamut of the occupational structure of the industry. East Bay banks and savings and loan associations still report a severe shortage of qualified escrow secretaries.

The new jobs in the banking industry are primarily the result of installation of data processing equipment. The new jobs include programmers, systems analysts, console operators, tab operators and keypunch operators.

Declining jobs in general are the routine clerical occupations. Mechanization has cut deeply into the ranks of the file clerk, hand posting clerk, mail clerk, and in some locations the bookkeeping machine operator. The introduction of electronic data processing systems, which largely replaced electronic accounting machine installations, has reduced the number of tab operators required but has increased the need for keypunch operators. In general, it may be concluded that as a result of automation, routine clerical jobs are fast disappearing and are being replaced by jobs that have somewhat higher skill requirements. In some outlying communities, demand for full-time tellers has declined but the demand for part-time tellers has picked up. Such temporary jobs as stock transfer and travelers check clerk are now contracted through private agencies such as Manpower, Inc., or Western Girl.

Training

All entry occupations in the clerical field now require at least a high school education. The most sought after applicants in this group are those with some training in typing, bookkeeping, office machines, and other commercial courses.

For management trainee positions the minimum educational requirement is two years of college; however, many institutions specify at least college graduation with a background in accounting, economics or business administration. Banks usually require applicants for these jobs to be between 21 and 30 years of age. Banks conduct on-the-job training for persons in the administrative and managerial fields.

Even though demand is still present for some declining jobs in banking, it is desirable that more of our training programs should be directed toward the jobs that are coming into focus. This illustration of what is occurring in banking is typical of what is happening in varying degrees across the spectrum of vocational and technical occupations. It is particularly true of large offices in fields such as insurance, food processing, public utilities, retailing, wholesaling, government, transportation and manufacturing.

Although bookkeeping is on the decline in large organizations, it will play an important role for some time yet in most small business operations. The principles of accounting are still considered to be a necessary and sound basis for education in data processing of all types, including programming, console operation, and system analysis.

Occupational Titles in Banking

The Department of Employment studies found the following occupational titles in banking:

Accounting clerk
Certified public accountant
Junior accountant
Bookkeeping machine operator
Calculating machine operator
Clerk, general office
Clerk typist
Computer operator
Credit & collection manager
Duplicating machine operator
Economist
Employment interviewer
Escrow officer
File clerk
Guard
Job analyst
Junior executive
Key punch operator
Market research analyst
PBX operator
Personnel manager
Programmer
Proof machine operator
Purchasing agent
Security analyst
Statistician
Stenographer
Tabulating machine operator
Teller
Title examiner

THE SERVICE INDUSTRIES

As the United States continues to grow and prosper, more and more people will leave manufacturing to perform the many services that make life more pleasant and easier for people generally. As the standard of living rises and the length of the work-week decreases, Americans will have more money, more time, and more interest in improved health, better education, and increased recreation. They now rely on laundries, dry cleaners, dressmakers, shoe repair shops, barber shops, and beauty shops to do the things for them that they used to do for themselves. "The service occupations in the Bay Area will benefit from a growing and affluent population with both money and the inclination to use the myriad services offered by these industries."[6]

Business is becoming more complex, more advanced technologically, and companies are developing the habit of calling on advertising services to sell their products. They contract with accounting, auditing, and bookkeeping services to handle their fiscal record-keeping; and they are employing audit bureaus and collection agencies to cope with the increasing use of consumer credit. Service and miscellaneous industries such as educational and repair services will be among the fastest growing during the coming decade, as they have been over the postwar period.[7]

The widening spiral of services reaches out to include many other forms of assistance: public relations, automobile and furniture repair, private employment agencies, business consultants, photography studios, funeral homes,

[6] Manpower Resources, Loc. Cit., p. 14

[7] U. S. Department of Labor, Manpower Report to the President, 1965, p. 53.

legal offices, engineering firms, architectural firms, welfare agencies, religious agencies and research development companies. These functions form one of the fastest growing employment areas on both the national and local scenes.

The Bay Area's attraction for tourists is significant in any labor market analysis in the field of services. It is estimated that the tourist total in the Bay region jumped from roughly 350,000 in 1932 to 1 1/2 million by 1956, and could go to 7 1/2 million by the year 2000.[8] The impact from such an increase, especially for the amusement-recreation and hotel sectors, is obvious.

Most service industries have increased their rates of growth substantially during the past few years.[9] In the San Francisco Bay Area services scored greater gains than such major fields as trade, government, and public utilities during the period from 1950 to 1962.[10] It is anticipated that about 990,000 employees will be added to employment rolls in the service industries (business, repairs, personnel, professional, and amusements) by the year 2020. This is an increase in relative importance from about twenty-one percent in 1957 to nearly twenty-four percent of the labor force by 2020. Services will have increased its employment total in the region by 350 percent between the years 1957 and 2020.[11]

To engage in further dissection of service occupations, the most rapid increases in employment in the Bay Area since 1950 have occurred in the medical and health fields; educational and legal activities; and, in most recent years, in such business services as research and development organizations, advertising agencies, and building-cleaning firms. Moreover, these same fields will hold the best opportunities for the immediate future.[12] Medical-health and business services are given top growth priority in a federal forecast.[13]

MEDICAL AND HEALTH OCCUPATIONS

Expanding Institutional Opportunities

Even before the passage of Medicare, the loudest plea for help was emanating from the medical profession. One of the reasons, of course, is the continuing population boom. More people, more hospital patients, and

[13] Manpower Report to the President, 1965, Loc. Cit., p. 55.

since each added bed theoretically requires two and a half additional employees, the growth impact is readily discernible. Health insurance coverage and public enlightenment are stimulating the demand for health services. Some labor unions are now turning their attention toward dental insurance for their members and some have already succeeded in obtaining this new fringe benefit.

Obviously, all this is creating career opportunities across the whole medical service spectrum, from the physician or dentist to the hospital pantry worker. This study, however, is concerned largely with areas in which the high school and junior college can play an important role in preparing people for productive employment.

Realizing the need for more information in this rapidly expanding field, the California Department of Employment completed in July of 1964 a study which attempted to identify the number of job vacancies expected in medical care industries during the two year period 1964-66 in the San Francisco Bay Area. The study covered hospitals, convalescent and rest homes, commercial medical and dental laboratories, and government-operated medical facilities; doctors' and dentists' offices were excluded. Government-operated medical facilities included all Federal hospitals, both military and civilian; all State hospitals, including mental hospitals; and the medical facilities operated by counties, cities, and special districts. The survey covered these medical care activities in all nine counties surrounding the San Francisco Bay -- Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano, and Sonoma.[14]

The medical care industries covered employed an estimated 57,700 workers in January 1964, about 43,400 of whom were employed in the 107 occupations included in the survey. Of the 107 occupations investigated, the results indicated that 46 -- or nearly half -- offered substantial opportunities for employment in the Bay Area through 1966.[15]

Nursing and other patient-care occupations account for more than half of the openings. Demand is strong for trained workers in these occupations in each of the Bay Area counties. More than 80 percent of the total demand is accounted for by 14 occupations, of which the largest volume is for Nurse Aides, Staff Nurses, Licensed Vocational Nurses, and Psychiatric Technicians -- all occupations in the nursing and patient-care field.

Some of the hospital administrators interviewed pointed out that one of the reasons for the shortage of registered (staff) nurses is closely related to their working hours. They said it was not difficult to get RN's for the 7 a.m. to 3 p.m. shift; the real problem comes in getting help for the 3 p.m. to 11 p.m. shift, and especially for the 11 p.m. to 7 a.m. shift.

Other Institutional and Industrial needs for which sizable demand exists, principally in the larger metropolitan centers, are clerk-typists, hospital janitors, and institution kitchen workers. There is area-wide demand for surgical technicians, electrocardiograph technicians, stenographers,

---

[14] California State Department of Employment, Medical Service Job Opportunities, San Francisco Bay Area, 1964-66.

[15] Ibid., p. 3.

typists, accounting clerks, insurance clerks, and medical records clerks.

The 14 occupations in which the most significant training needs were found are ranked in Table 1 in order of the number of workers needed during the two twelve-month periods ending January 1965 and January 1966.[16]

TABLE I

Rank Order of Technicians Needed in Medical Occupations

Occupation	Workers Needed 12 Months Ending: January 1965	January 1966	Total Demand 1964-66
Nurse Aide	1738	1838	3576
Staff Nurse	1663	1711	3374
Licensed Vocational Nurse	775	732	1507
Psychiatric Technician	520	536	1056
Hospital Janitor	399	427	826
Kitchen Helper	333	354	687
Clerk-Typist	307	336	643
Orderly	302	323	625
Ward Maid	219	282	501
Ward Clerk	209	229	438
Medical Technologist	187	227	414
General Office Clerk	158	145	303
Cook	127	136	263
Medical Secretary	101	110	211

X-ray Technicians are badly needed in the United States as a whole, especially in hospitals and industries, according to leaders in the medical field. Starting pay for qualified technicians averages $3,000 per year nationally, with advancement possible to approximately $10,000.[17]

Medical Record Librarian is a particularly attractive field for women. This "semi-profession" presently requires a specialized 12-month training program after completion of two years of college. The work involves setting up and maintaining a hospital's or clinic's library of files on each patient and analyzing the records for various statistical purposes. Pay is extremely good, starting at

[16] Loc. Cit., p. 4

[17] College of San Mateo, The Job Ahead, Occupational Research Project, 1964, p. 108.

about $5,000 a year, and the demand for librarians is expected to "far exceed" the supply, at least through the rest of this decade. Although more than a junior college education is needed to achieve registered status at present, several hospital executives have voiced the opinion that this occupational field might be accommodated by two-year programs in the future.

Accredited Record Technician is one notch down from the medical record librarian. In large institutions the technician may be the person in charge of the library. Educational requirements are substantially lighter, usually only a year in an approved hospital after high school graduation.

Medical Secretaries and Medical Transcribers have been indicated as the greatest current need by several hospital administrators. These women, according to a 1962 Bay Area survey by the California Association of Medical Record Librarians, were being paid at least $310 a month to start with a potential maximum of $450 in view. That was appreciably above the minimum hospital starting pay for typists ($285) or file clerk ($260). Medical secretaries are assigned to pathologists, radiologists, and members of the hospital or clinic medical staff. They must know medical terminology in addition to the usual secretarial skills. It was suggested that in junior college a course in physiology and another in anatomy would be sufficient accompaniments to the secretarial curriculum to prepare candidates for job openings.[18]

Dental Hygienists, Assistants, and Technicians

While the number of dentists in the San Francisco-Oakland Bay Area is growing very rapidly, there are still far too few dentists to keep up with the demand for dental services. Therefore, there is an increasing need for "ancillary" employees to free the dentist from routine tasks. Dental assistants, dental hygienists, x-ray technicians and dental technicians are examples of such service occupations.

Dental laboratory technicians handle duties which do not involve work performed directly on patients. Most of them are employed in commercial dental laboratories.

An individual employed as a dental technician needs manual dexterity, good color perception, and a liking for detailed work. He prepares metal, hard rubber, plastic and other composition plates and dentures from wax impressions taken by a dentist; he constructs metal clamps, inlays, and bridgework, performing exacting manual work according to the dentist's written prescription. Some dental laboratories are run on a production line basis and in these establishments the technician does only one part of the job -- for example, the acrylic or the chrome work.[19]

After three years of satisfactory "internship" a dental technician is eligible for an examination given by a national board of certification. Starting pay in the Bay Area ranges from $75 to $125 a week, with a top of approximately $250.

---

[18] The Job Ahead, Loc. Cit., p. 110.

[19] Medical Service Job Opportunities, Loc. Cit., p. 25.

"Comparative studies have shown clearly that effective use of ancillary personnel and multiple equipment enables the practicing dentist to increase as much as 100 percent the number of patients treated in the course of a year. However, the supply of well qualified personnel is so inadequate that only about 10 percent of the nation's dentists are currently employing dental hygienists and only about two-thirds are utilizing the services of a dental assistant.

"Moreover, the duties of such ancillary workers are sharply limited by existing legislation and by tradition, so that dentists are unable to make maximum use of the personnel now employed. This situation has led to serious consideration by the dental profession of the need for expansion of the functions of dental hygienists and assistants to permit delegation to them of the routine, non-technical services customarily performed by the dentists." [20]

OTHER SERVICE OCCUPATIONS

Legal Secretaries

There is presently great demand in the Bay Area for well qualified legal secretaries. Several personnel specialists in the area have estimated the beginning wage for a qualified woman at $375 a month. It has been pointed out that good employees in this specialty are hard to find and hard to keep. They are eagerly sought and well rewarded.

A private personnel consultant points out that one reason for the fast turnover of secretaries in the legal field may be the fact that a number of women overestimate the "glamour" of working in a law office. He says that the glamour is fictional and that actually lawyers are looking for women who can enjoy what is essentially a very demanding job, and who can learn to live with the fact that it is rarely, if ever, exciting.

To be successful in a law office, a secretary should have at least two years of college and demonstrate excellent skills and high intelligence. She needs also to be discreet, meticulous, and personable.

Nursery School Assistants

Nursery school assistants compose another service occupation in short supply. There is ample evidence that the nursery school business is growing in the East Bay and it is anticipated that it will continue to grow at a faster rate than can be tied wholly to population increase in that age category. Anticipations are based on mounting public realization of the importance of education and the resultant interest in getting the formal process started ahead of the kindergarten year. The present pay scale ranges from $208 to $400 a month. As higher standards now in the works take effect, the remuneration can be expected to rise proportionately.

New quality considerations are being prepared by the State Department of Social Welfare to remedy the fact that there are no set standards

---

[20] The Job Ahead, Loc. Cit., p. 108.

of educational qualifications for the staffs of licensed nurseries. As envisioned, the changes would require directors of the schools to have at least an Associate in Arts degree, and teachers at least a high school diploma. Directors and teachers would be required additionally to complete, within a given time, certain college-level courses covering the field.[21]

Automobile Mechanics

Automotive mechanics are still in short supply, according to the California State Department of Employment. "About one out of four repairmen in the Bay Area works in the automotive field - - an indication of the importance of motor vehicles in the economy of this area. There has been a recognized shortage of well qualified automobile mechanics in the Bay Area in recent years."[22] This skill shortage may also be contributing to the rapidly increasing practice of replacing mechanical units instead of repairing them. Another source adds: "The number of automobile mechanics is expected to grow faster than the labor force as a whole. The increasingly complicated automobile continues to create the need for specialists such as automatic transmission specialists . . . . An increasing number of diesel mechanics will also be needed."[23]

A San Mateo Junior College survey states: "Current journeyman minimum hourly wage for automotive mechanics in the San Francisco Bay Area is $3.55, with some making $4.00 to $4.25....Ambitious workers can aim at promotion to jobs as foremen ($175 to $200 a week), and service managers (perhaps $900 a month)."[24] Many young men are starting their own businesses in this field because of the apparent demand. It should be noted, however, that without considerable capital investment, these small businesses are limited in the types of jobs they can take unless they have a cooperative tie-in with a larger garage that can afford the expensive modern equipment required.

Appliance Repairs

Appliance repair is an area in which supply has not caught up with demand for some time. In this field also, the quantitative and qualitative lag in the training of repair personnel has no doubt contributed to the practice of replacement instead of repair. Investigation indicates that good technicians in this field are in constant demand as more and more appliances come on the market and become standard household equipment. Starting pay for a qualified man is about $3.50 an hour, but there are many instances of qualified appliance repairmen grossing more than $10,000 a year.[25] This field is open for qualified people to start their own small

businesses, and without the demands on expensive capital equipment that occur in the field of automotive repair.

HOTEL AND RESTAURANT OPERATIONS

Under the categories set up by the U. S. Census Bureau, Hotels (including motels) come under service occupations, while eating and drinking places are listed under retail trade.

Hotels and restaurants cater to the same clientele and sometimes share the same premises. Seasonality influences the business pattern similarly in hotels and restaurants, and wages for most jobs in both industries are toward the lower end of the scale. Of particular significance to this study are the differences in the number of job opportunities provided by each industry, the divergent employment trends in hotels in contrast to restaurants, and the effect of the business cycle on the welfare of each industry. The contrast in size of the large hotel firms over the more numerous small restaurants also accounts for many of the differences in the character of these two important segments of trade and service. Since the late fifties, the hotel industry in the San Francisco Bay Area has had a resurgence of growth, a trend that has characterized this industry throughout most of the United States. A recent study by the Research and Statistics section of the California State Department of Employment includes the following highlights:[26]

Bay Area hotel and restaurant industries covered by the survey employed an average of 48,900 workers in 1964; three-fourths worked in the area's eating and drinking establishments; one-fourth worked in hotels, motels, and other lodging places.

Of these workers, approximately 27,200 worked 20 or more hours per week in one of the 80 surveyed occupations. The remaining 21,700 worked in jobs where the establishment of training programs under the existing legislation was not considered appropriate, or were on their jobs fewer than 20 hours a week.

Half of those working in surveyed occupations were engaged in the serving of food; an additional third worked in the preparation of food; the remainder were found in exclusively hotel occupations.

Over 3,800 job vacancies for workers in the surveyed occupations are anticipated in the next two years in hotels, motels, restaurants and related establishments in the Bay Area. About half of these openings will develop for replacement purposes; the other half will be new jobs resulting from the opening of new facilities or the expansion of services by existing establishments.

More than half of the expected openings will occur in food service occupations -- in particular for waitresses, waiters, counter men, counter girls, and busboys. Sizeable demand also exists for food preparation occupations such as cooks, pantry men, pantry women, and dishwashers.

[26] Hotel & Restaurant Job Opportunities in the San Frandisco Bay Area, 1964-1966, California State Department of Employment, March 1965, p. 3.

The occupations in which the most significant demand was found are ranked in Table 2 in order of the total number of workers needed for expansion and replacement purposes during 1964-66. The table shows that more than 85 percent of the total demand is accounted for by 9 occupations. More than 50 percent of the total demand in surveyed occupations will be for waitresses, waiters, and cooks.[27]

TABLE 2

Employment in Food-Connected
Hotel and Restaurant Occupations

Occupation	Estimated Employment October 1964			Manpower Needs: 1964-66		
	Full-time	Part time*	Total	Replacement	Expansion	Total
All Surveyed Occupations	23,100	4,100	27,200	1,890	1,930	3,820
High Demand Occupations	19,130	3,590	22,720	1,610	1,730	3,340
Waitresses-Total	5,300	1,400	6,700	620	460	1,080
Cooks (except Chefs)	4,850	350	5,200	320	240	560
Waiters-Total	1,450	550	2,000	100	360	460
Bus Boys-Total	1,600	500	2,100	130	200	330
Dishwashers	1,900	200	2,100	130	150	280
Counter Men, Counter Girls	1,300	300	1,600	110	90	200
Maids-Total	1,400	200	1,600	100	80	180
Pantry Men or Women	800	70	870	50	100	150
Food Service Cashiers	530	20	550	50	50	100

*Part-time employees are those who worked 20 hours or more per week, but less than a full work week.

Hotel Employment

The hotel industry is marked by fairly extreme fluctuations closely linked to economic conditions. Between 1949 and 1958, hotel employment declined nearly 10% in the Bay Area. In the six years from 1958 to 1964, average employment in hotels and other lodging places rose by nearly 500 per year to reach almost 13,000 in 1964. Most of this rise, however, occurred in San Francisco where for many years nearly 7 out of 10 jobs in the industry have been concentrated.

[27] Hotel & Restaurant Job Opportunities in the San Francisco Bay Area, 1964-66, Loc. Cit., p. 3.

In Alameda County the 1964 level of hotel employment was only slightly higher than it had been in 1950 and for most of the intervening years a marked decline in hotel employment in downtown Oakland had resulted in a net loss of jobs in this industry. Most of the upturn has occurred since 1960 in Alameda County. Contra Costa County, on the other hand, showed 50% growth in jobs in this industry between 1950 and 1960, with no increase from 1960 to 1964.

The number of employees in hotels has grown nearly twice as fast since 1960 as total Bay Area employment. However, it did not rise as fast as employment in the entire service industry of which hotels comprise a part. Largely this emphasizes the rapid growth that has been taking place in professional and semi-professional services (legal, medical, educational) in contrast to the slower growth of the lesser skilled jobs that predominate in personal services. Some of these types of jobs are vulnerable to labor-saving innovations.

San Francisco's supremacy in the hotel trade is gradually declining as new motor hotel facilities are appearing in surrounding areas. The new facilities, however, represent only modest increases in the number of new jobs.

A study of wages in Bay Area hotels and motels in 1963 revealed that for non-supervisory jobs the average hourly wage received was $2.01. Bellmen were the lowest paid occupational group among front office hotel workers, although their wages are supplemented by tips from guests. Desk clerks earned the highest average hourly wages among these surveyed occupations.[28]

Two years of college education, with a business major, can put a young man or woman on the first step of the ladder -- desk clerk -- leading to a management post. Human relation skills will determine how far he climbs from the bottom rung. For really competent people, the prospects are very bright. "I know of four or five jobs right in this area now for sharp young men as managers or assistant managers," said one hotel executive. (Managers earn roughly $1,000 a month and up, plus full maintenance.) A particularly pressing need is frequently cited for well-trained culinary personnel. Not enough public school instruction oriented toward the hotel end of the business now exists in the vicinity. As a result, said the executive, "many places are putting up with second-grade help because there's nobody any better available."[29]

Restaurant Employment

Two major factors bear heavily upon the economic health and growth trends of the restaurant industry. One is population growth; the second is the general economic situation, whether booming, stable, or in recession. Eating out, while a luxury for some, is a necessity for others. Adding to the importance of restaurants in the Bay Area is the region's attraction for out-of-town visitors and the tradition for good food and fine restaurants.

---

[28] Hotel & Restaurant Job Opportunities in the San Francisco Bay Area, 1964-66, Loc. Cit., p. 9.

[29] The Job Ahead, Loc. Cit., p. 114.

There are many kinds of restaurants in Alameda and Contra Costa Counties -- corner lunch counters catering primarily to office and service workers; roadside hamburger stands; small family-operated restaurants specializing in a particular ethnic fare; motel-connected coffee shops; and the more formal hotel dining rooms and truly luxury establishments. Each has its own special atmosphere. Variations in size and type of restaurants, the quality of service and the nature of clientele, may lead to wide-ranging differences in methods of operation and staffing patterns.

In the five-county Bay Area, the restaurant industry provided jobs for 36,000 workers on the average in 1964, or nearly one of every 20 wage and salary workers in the area.

Restaurant employment in Alameda County grew from 8,400 in September of 1960, to 9,200 in September of 1964 for a gain of 9½%. In Contra Costa County, restaurant employment grew from 2,500 to 3,500 during the same period, for a gain of 40%.

In general, the restaurants of the Bay Area experience their annual peak of activity in September as the last spurt of summer vacation activity brings thousands of travelers to the region.[30]

It is evident that expansion in employment in the restaurant industry has been most marked in those parts of the Bay Area where population growth has been most pronounced.

Many existing restaurant firms constantly undergo remodeling as neighborhoods change character and new restaurants open in newly developing communities, taking the place of marginal firms that succumb to the rigorous competition of the industry.

The trend towards larger restaurants is apparent in data on distribution of employment and the number of firms by size of establishment. Employment since 1960, while declining among the smallest employer classes (from 0 to 9 employees), has risen in all other classes except in the class with 500 or more employees.

Restaurant wages in the Bay Area are among the highest paid anywhere in the United States for comparable work. The lowest wages were paid to waiters and waitresses for whom tips form an important part of total earnings, while head cooks and assistant cooks -- the most highly skilled workers covered in the wage survey -- were the best paid of all non-supervisory restaurant employees.[31]

A San Mateo survey reported that the hardest entry job to fill satisfactorily with all restaurant managers interviewed is cook (paying from approximately $19 to $25 a day). All interviewees predicted their business would grow at a greater rate than the population.[32]

---

[30] Hotel & Restaurant Job Opportunities in the San Francisco Bay Area, 1964-66, Loc. Cit., p. 9.

[31] Ibid., p. 12

[32] The Job Ahead, Loc. Cit., p. 79.

Anticipated Future Opportunities

Food service is the largest single job category of hotel and restaurant employees; food preparation is the second largest. Additional jobs in the industry fall primarily into front of the house, (which includes both front office and uniformed service), accounting, and housekeeping. Accounting department jobs, executive and supervisorial jobs are excluded from these survey figures.

Food Service Occupations will comprise the greatest number of job opportunities in restaurants. In fact, more than half of all job openings projected through 1966 were in this category. Demand for waitresses leads this list with over 1,000 vacancies occurring during 1964-66, with replacement jobs outnumbering by 3 to 2 new jobs created by economic growth. Despite this substantial demand, there currently exists a substantial supply of experienced workers in this occupation and the turnover of workers among employers is high. Many of the available workers are so marginally qualified as to be unacceptable to employers, who are continually looking for neat-appearing girls, who can work rapidly and efficiently and who are willing to work split shifts, late hours, and holidays characteristic of this industry. Much of this turnover among employers is also the result of job hopping by employees.

The next largest number of food service job opportunities will be for waiters. Nearly 500 vacancies are expected over the next two years for all the various types of waiter specialties -- formal, informal, banquet, bar and cocktail. In contrast with waitresses the bulk of the expected vacancies for waiters should be created through expansion of the industry rather than through replacement of existing workers.[33]

Food Preparation in the kitchens of restaurants will provide nearly one-third of all anticipated jobs to be added to hotel and restaurant payrolls over the next two years. In these occupations, predominantly performed by men, replacements for workers who permanently leave the local labor market will match the volume of jobs expected to be added in this period by the expansion of existing firms and the opening of new restaurant facilities. The 1,130 food preparation jobs to be filled will be almost entirely full-time jobs, in contrast to the nearly one out of five part-time jobs currently found in food service departments. However, nearly half the food preparation jobs will be for cooks, that is the most skilled of the surveyed occupations in the hotel and restaurant study. Of these the 180 short-order and fry cooks will be the most readily available, for there is a supply of marginally qualified cooks with experience in these occupations, who could locate more permanent jobs given a systematic training in the kind of work they know best. The recently trained and new entry worker has a better chance to find this kind of job in the smaller restaurant where promotion from within is not the usual means of filling such jobs. Some of these jobs will be filled by other kitchen workers such as kitchen helpers, busboys and dishwashers who can acquire on-the-job exposure to the work and its demands and step into a routine cooking job when an opening occurs. In order to fill the jobs of the 220 combination cooks and general cooks, station cooks and second cooks expected to develop, the chances for filling these jobs are best for workers already employed in kitchens, rather than for newly trained

---

[33] Hotel & Restaurant Job Opportunities in the San Francisco Bay Area, 1964-66, Loc. Cit., p. 21.

entry workers without practical experience. These jobs are filled wherever possible by promoting from within the establishment, with the result that one is not likely to progress directly from a dishwasher to an advanced cook. A more likely advancement would be for a vegetable man, cook's helper or assistant to a pantryman to be offered a cooking job. The job of a person promoted in this way might then be filled by someone from a less skilled position, and here the busboy, dishwasher or kitchen helper might find his best opportunity for rising to a more highly skilled and better paying job. Kitchen helpers, busboys and dishwashers are the unskilled labor of the restaurant trade. As a consequence jobs in these categories can be filled readily when the willing job seeker comes in contact with an available job.[34]

SUMMARY

It is recognized that this study has dealt with only a few of the occupations that comprise the broad area of services. While few generalities can be made regarding this dynamic family of occupations, it is evident that the service occupations most likely to be in short supply in the years directly ahead are those which require the most extensive and difficult periods of training.

It is also recognized that business, education, and government leaders of the San Francisco Bay Area must maintain the best possible communications concerning the demands and the sources of supply for the increasingly dynamic labor market if the best interests of this region are to be served.

INDUSTRIAL EDUCATION: - ITS PLACE, PURPOSE, OBJECTIVES, METHODS AND ORGANIZATION IN THE ARLINGTON COUNTY PUBLIC SCHOOL

INDUSTRIAL EDUCATION - ITS PLACE

"We believe that education is a continuous developmental process ... This process involves the development of communication skills and a disciplined system of thought and problem solving ... It involves the cultivation of an inquiring mind, the desire for knowledge, respect for learning, and rational attitudes toward law and change... to provide opportunity for each child to develop to the greatest extent a positive view of himself ... to provide opportunity for each individual to develop as a responsible, trustworthy and compassionate member of society who contributes to the social, political, economic, and spiritual advancement of mankind, according to his own individual gifts."

Students are provided the opportunities to achieve these ideals in an educational system in which instruction is organized and planned in the following major divisions of learning:

1. Humanities
2. Applied Arts
3. Social Studies
4. Communications
5. Theoretical Sciences

Each of these divisions is a part of the total educational experience leading to the complete integration of the individual into the society in which he lives.

It is then found that there are areas of study needed in the total curriculum which have as their function the development of meaning through application to the occupational and productive activities of our society. Today's person, to become truly educated, must know more than just theoretical aspects; he must build relationships among all subjects and develop a sense of their total purpose. Industrial and related activities are very important to the present technological age, a study of the application of art, science, economics, and mathematics, in the engineering, planning, and production sense gives meaning to many of the major divisions of education and provides orientation for selection and preparation of an occupation. Industrial Education as one of these areas of study then partially fills the need and has a place in the total curriculum by developing meaning through application.

INDUSTRIAL ARTS - ITS PURPOSE

The purpose of Industrial Arts is not clearly understood by all. This was evident throughout the country and prompted the American Council for Industrial Arts Supervisors, in 1961 to clearly define and state the purpose of Industrial Arts in the total educational curriculum. Many committees throughout the country worked to compile this national statement. In 1962 this statement was published by the Council. The Arlington County Industrial Arts Teachers agreed to accept this statement and it has become a part of the Junior High Industrial Arts Curriculum Guide.

> "... Automation, increased production, scientific, engineering and changing occupational needs are indicators of dynamic technological progress ... most students are far removed from actual manufacturing.. Knowledge of the impact of industry on society, development of economic interdependence, fundamentals of industrial process, utilization of human resources are desirable if today's citizens are to function intelligently .... Interpreting industry, discovering and implementing individual interests and abilities .... developing technical knowledge are responsibilities met through Industrial Arts. Provides opportunity for students to participate in representative experiences in industrial skills and processes ... provides practical application of mathematics, science, art, and language arts ... discovery and development of personal aptitudes, interest, creative technical abilities, self reliance, good judgement through problem solving and self expression .... Industrial Arts brings about wholesome change in the learners by affecting his habits, attitudes and understanding .... learns about how materials are made and fabricated ... place of tools, machines and men ... evaluation of craftsmanship and constructive work ... favorable attitude towards creative thinking and assuming self expression and control over environment ..."[2]

INDUSTRIAL ARTS - OBJECTIVES

Many objectives for Industrial Arts have been set forth and postulated from every section of our country. In 1960, a conference called by the Health, Education and Welfare Department, brought together national leaders in the field of industrial arts education to arrive at some national agreement for Industrial Arts objectives. Dr. Ivan Hostetler, Head of the Department of Industrial Arts, North Carolina State College chaired the group of national leaders.

The group made an analysis of the objectives that had been developed for Industrial Arts between 1928 and 1960. The published report refined and redefined the long lists to four major objectives.[3]

In 1961 the American Council of Industrial Arts Supervisors duplicated the efforts of Dr. Hostetler, and took into consideration his findings. During 1962 a common agreement among superivsors was made and the Association acknowledged Dr. Hostetler's work by accepting for national publication his four objectives.

In 1962 the Arlington County Public Schools Industrial Arts instructors agreed to subscribe to these objectives and included them in the published Junior High Industrial Arts guide.[4]

The four objectives subscribed to are:

1. To develop in each student an insight and understanding of changing industry and its place in our culture.

2. To discover and develop talents of students in the technical fields.

3. To develop practical problem-solving skills related to the material and process of industry.

4. To develop in each student skill in the safe use of tools and machines.

These four objectives are considered as a whole basic for Industrial Arts and supplementary objectives are/can be developed for various age groups, grade levels, gifted and slow learner.

INDUSTRIAL ARTS - ORGANIZATION AND METHOD - GRADE 7, 8, 9

Several conditions have influenced the present Industrial Arts program in the Arlington County Public Schools:

1. Parent and student demands for educational opportunities.
2. A student body in most part "academically" oriented.
3. Structure of the school day (6 periods).
4. State and local requirements for graduation.
5. Type of community.
6. Evaluative criteria for Junior and Senior High Schools as set forth by the National Study of Secondary School Evaluation.
7. The feedback from some students through a survey to make the course content more challenging.
8. The feedback from administration to provide for the student who is not academically oriented.
9. Abilities of various types of students who elect to enroll in Industrial Arts.

The preceding greatly influence the organization of the existing programs, construction of shops and selection of equipment to support the overall organization.

The Arlington County Public Schools Industrial Arts Curriculum has incorporated the Guiding Principles of the Evaluative Criteria for Junior High Schools.[5] A self evaluation, using these criteria resulted in a high rating for the following: 1) Organization, 2) Nature of offerings, 3) Physical facilities (with the exception of two schools), 4) Instructional activities, instructional materials and methods of evaluation, and 5) Student outcomes.

The seventh grade course of study, due to the short period of scheduled time and the necessity of rotating the students through three major areas of study within the shops has caused the instruction to become mainly teacher-oriented. The initial experience of seventh grade students is planned to:

1. Explore a broad overview of industry
2. Develop the concepts of drafting and sketching, the language of industry.
3. Provide an opportunity to work with metals, woods, plastics and some crafts.

The methods of instruction may include:

1. A class project in mass production
2. The use of metals to support a unit in power mechanics
3. The designing and fabricating of individual projects to limitations set by the teacher.
4. Thorough instruction in the care, selection and safe use of the basic hand tools and simple machines that are related to the areas of wood, metal and plastics.

Industrial Arts I is a full year elective course. All Arlington students in grade eight are encouraged to enroll. Ninth grade students who have not had a previous industrial arts experience are grouped into these classes. In the past two years several girls have enrolled in this course and in one school a special program for girls has been developed which places the emphasis upon consumer knowledge, home mechanics and home safety.

Instruction for the Industrial Arts I is developed through student-teacher planning. The areas of instruction include:

1. A unit in drafting, planned to introduce the student to: the care and use of the basic instruments, and study orthographic projection which enables the student to express and communicate his ideas on paper.

2. An introduction to, and instruction in, the basic operations of some additional equipment used in woodworking and metalworking.

3. An introduction to foundry practice.

4. An introduction to simple processes of machining metals and forging.

5. A unit in simple electricity.

The methods of instruction may become flexible, to account for different ability and interest groups, and include:

1. Mass/line production,[6] (this is usually developed differently with each class).

2. Problem solving[7] is stressed. The student states his problem, (it may be a "take home" project, experiment, or an item for the school), outlines his solution, makes a working drawing, computes the cost, and the final outcome is evaluated by student and instructor.

3. Group projects[8] involving two or more boys are encouraged.

4. A study of a broad unit of an industry.[9]

Industrial Arts II, a yearly elective, is offered to all ninth grade students who have had Industrial Arts I. Instruction in Industrial Arts II is mainly student-oriented. The major areas of instruction include;

1. A further depth study of the concepts in drafting, and the development of the basic manual skills.

2. Depth in instruction in the safe use of power equipment.

3. A unit for the introduction to simple electric welding.

4. A unit in the industrial ceramic practice.

5. An introductory unit in letterpress printing.

6. An introductory unit to internal combustion engines.

The methods of instruction used are:

1. A student-oriented mass/line production project (the direction for development and execution is different with each class.)

2. Problem-solving is again stressed (this permits instructors to recognize and allow for individual student differences).

3. Individual student selected and designed projects.

The total junior high curriculum for industrial arts is flexible and attempts to provide for the individual differences among students. The program provides more learning experiences than usually advocated by some leaders.[10]

A sample survey[11] was taken of the ninth grade boys to ascertain why more boys did not select Industrial Arts as an elective course in their program. In main, the statements read: 1.) the parents desired the child to start "academic studies," 2.) The offered Industrial Arts course was not challenging. The latter caused the inception of a pilot program for the study of pure electronics, with emphasis placed upon comprehending circuits and electronic components rather than rote trouble shooting. The original intent for the course was terminal and planned for those students who would not be able to elect an industrial arts course in their senior high school schedule. A positive evaluation was given for the course and in 1963 a staff was trained to initiate the program in all junior high schools.[12]

SPECIAL PURPOSES

Limited provision is made in the industrial curriculum for groups to slow learners, mentally retarded and non-academic producers. The educational experiences for these children becomes meaningful as he participates in shop activities which emphasize learning by doing. Through participation in the program, these learners experience the moral-building stimulus that comes with successful accomplishment.

INDUSTRIAL ARTS - GRADE 10, 11, 12

"... When satisfactory vocational facilities are not available the Industrial Arts department must assume some responsibility for this specialized training."[13]

The above guiding principle, broad offerings of the existing junior high industrial arts programs, and a large enrollment in each of the three comprehensive senior highs, have influenced three types of Industrial Arts shops to be developed in Arlington: the General Unit Shop, and two types of Unit Shops,[14] one vocationally oriented and the other type technically oriented. Basically this organization and the content of each course offered in each shop provides the opportunities for a student to select a course according to his interests, abilities and talents. The present composite student body in each senior high school gives changing direction to course offerings in each school.

All courses are elective and are offered to students who meet established criteria for admission.

Basic in all Arlington senior high schools is a Drafting and Electronics course of study, each having a definite sequence of courses directed toward depth in technical training. The instructional emphasis is placed on developing manual skill and acquiring a depth of technical knowledge. It is found that these courses have greater appeal to the more gifted student.

In two schools there are Unit Shops providing the facilities for the Printing and Automotive programs, and each program has a definite course sequence directed toward vocational training. Both programs give emphasis to the development of manual skills and the acquisition of general knowledge. These programs seem to have appeal to the average and below academic average students. Some students select one of the courses to fulfill the prerequisite for admission to Vocational - Day Trade program in their 11th or 12th grade or to meet their avocational interests.

not always true in printing

There is developed General Unit Shop in two schools. These shops provide learning experiences in a broad area of study through limited experiences in several minor areas of the broad study. The courses in General Unit Metals or General Unit Woods provide the opportunity for a student to discover and later to develop his talents and interests in one of the smaller areas of study.

Ex.

General Unit Wood	General Unit Metals
1. House Construction	1. Welding
2. Cabinet Making	2. Machine Shop
3. Building Trades	3. Art Metal
4. Pattern-making	4. Foundry Practice
5. Fiberglassing	5. Forging
6. Boat Building	6. Heat Treating
7. Experimentation with various materials.	7. Sheet Metal

Not much, if any, in power at Wakefield!

In two of the senior high schools Comprehensive General Shops have been developed. The emphasis in these shops is general education and learning experiences are provided in the areas of art, sheet and cold metal, foundry, machine shop, welding, letterpress printing, plastics, and woodworking. These shops were developed for the student who desired a variety of experiences rather than specialization in one narrow area, as offered in the Unit Shop; or, for those students who for the first time, desired an Industrial Arts experience.

One comprehensive general shop has inaugurated a joint program in cooperation with the Science Department for research-experimentation.[15] This program provides the student with an opportunity to define and scientifically outline a solution to a problem with the science instructor, and then use the shop, which provides the facilities and instruction for the student, to learn how to fabricate materials or run tests to complete a solution to his original stated problem.

An experimental course, Commercial Design, is being developed in conjunction with the Art Department. The manipulative skills and processing of materials are taught in the shop. From their shop experiences the students can directly apply the new knowledge to design, causing the total experience to become more meaningful to them.

One senior high school offers a course in Jewelry, Lapidary and Ceramics. This course places emphasis on jewelry design, investigation of semi-precious stones and metals, and development of manual skill. Students select this course for avocational interest or pre-vocational training leading to further study in jewelry repair or as a dental technician.

VOCATIONAL - TRADE AND INDUSTRIAL (DAY TRADE) GRADES 11-12

In the late 1940s there was a severe decline in enrollment of the day trade students which led to deletion of the Vocational-Day Trade programs. The emphasis on education had shifted toward the "academic" and local requirement for high school graduation were increased.

In 1961 the vocational-day trade program was reorganized and vocational offerings were provided all 11th and 12th grade county public school students, at three centers, in the areas of Printing, Auto Mechanics, Masonry, and Air Conditioning-Refrigeration. The main emphasis on these courses was and is to have students develop competencies for an initial entry into a trade. At present, three Vocational-Day Trade programs are in operation; Printing with a very small enrollment, and two Auto Mechanics shops having an over-subscribed enrollment, making it most difficult to select the most deserving students for entry.

INDUSTRIAL COOPERATIVE TRAINING

In addition to the Vocational - Day Trade program, a Vocational - Industrial Cooperative Training program is offered in all senior high schools to all 11th and 12th grade students who meet certain admission prerequisites. The purpose of the program is to develop competencies for initial entry into a specific area of industrial work. The resources of the community become the "shop" and provide the training which the school at present is not equipped to offer.

The students are provided study materials which are directly related to their industrial work. The student devotes a period per day in related study with the coordinator. The student is gainfully employed in the community for a minimum of fifteen hours per week in an on-the-job training experience. This experience is carefully evaluated by the Coordinator. If proper industrial training is not given by the employer the training station is changed by the Coordinator.

Some students who do not meet the criteria for admission to the Industrial Cooperative Training program may elect a Work Training Program. This course emphasizes employee - employer relationship, and work in the community's plants becomes the learning experience. Satisfactory completion of the course allows the student to enroll in the Industrial Co-operative Training Program.

VOCATIONAL - TRADE EXTENSION

Under Vocational-Trade Extension, evening courses are offered for out-of school persons who desire upgrading, retraining or training in the following areas - Auto Mechanics and Electronics. Courses in Drafting, Metalworking and Woodworking have been offered when there has been a demand. An evening course, Jewelry and Lapidary, is offered for avocational interests.

Short terminal courses have been offered in the senior high with few students showing an interest. After school clubs are sponsored by various members of

the Industrial Arts departments. Ex. - Hobby, Radio, Public Address Systems, Auto, Rocket Society. (also — Industrial arts club for those students not currently enrolled)

Arlington County Public School System does offer what is believed to be a well-balanced program in Industrial Arts, grades 7 - 12.

PROPOSALS

There is proposed for administrative approval and 1966-67 budget approval, a county-wide Vocational Cosmetology Laboratory and a Vocational Air Conditioning-Refrigeration or Vocational Electricity Shop. Proposed for the same considerations is a program for "Youth with Special Needs."

Thought and exploration has been given to extending Industrial Arts into grades K-6. The existing elementary curriculum is crowded and classroom space is not available. At this time it does not appear feasible to inaugurate Industrial Arts in the elementary curriculum.

Ours is a changing world. The problem of yesterday is not the problem today. The education of yesterday is not the education of today. In an attempt to improve the total Industrial Education program, can you suggest any deletions, additions, innovations, or direction that you believe we in Industrial Education should make to better serve the students and people of Arlington County?

Differences Between

	INDUSTRIAL ARTS	VOCATIONAL EDUCATION
OBJECTIVES	A phase of general education pertaining to the tools, materials, processes, products, organization and problems of industry. To develop an insight and understanding of industry and its place in our culture.	Specialized training in a limited area to develop competancies for initial entry into a trade or craft.
GROUPS SERVED	In Arlington County it is mandatory for 7th grade boys, with the exception of those enrolled in music and a foreign language. It is elective for grades 8-12.	Select groups: Student will be 16 years of age upon completion of course. Need for and ability to profit from training. Start training in 11th grade.
LENGTH of COURSE	Adapted to school schedule - 1 period per day, 5 days per week. A few groups may meet 2 periods per day.	Day Trade classes: 3 hours in shop or 2 hours in shop and 1 hour in related study. Industrial Cooperative Training: 1 hour per day related study. Minimum 15 hours per week on-the-job training experience.
CONTENT of COURSE	Directed toward the study of the broad scope of industry and its ramifications.	Directed toward specialized study in a trade. Emphasis is on the technical knowledge. Develop trade skills.
METHODS of INSTRUCTION	Centered around projects; group lessons and demonstrations, reading required, problem solving technique used, mass production field trips, experimentation.	Industrial production procedures followed, lectures, skills emphasized, practical performance tests used. "Mock-ups" used.
TEACHER TRAINING	College graduate with broad technical background. Educated in child growth and development, understands process of learning and teaching methods.	College graduate or competent trade experience 3 years, American citizen, 21 years or older. Approved by State Supervisor. May be required to have some college training, usually 6 hours.
PLACEMENT	Little effort made to place and follow up students. Instruction not intended to prepare for initial job entry, some students may enter the work area.	Placement and success of trainees measure effectiveness of the particular program.
EQUIPMENT	Predominance of hand tools - machines of lightweight construction.	Modern production equipment - heavy duty - expensive.
OUTSIDE AGENCY	No direct obligation to cooperate with outside groups.	A cooperative undertaking with community.
FEDERAL or STATE AID	As yet no funds available. May be in immediate future.	Partial reimbursement for Instructors and Director's salaries and for plant and equipment.

Preface

Distributive Education in the Commonwealth of Pennsylvania has experienced rather small but steady growth over the past twenty-seven years. The need for this type of education has been pointed out over and over yet, for some reason, school administrators have not seen their way clear to initiate such a program in more than a handful of Pennsylvania's schools.

This publication is intended to indicate the current administrative policies surrounding Distributive Education together with program philosophies and recommendations.

As more and more Federal and State legislation is turned toward realistic vocational education, it is anticipated that more and more local school districts will feel the need to implement such programs. It is in this light that we have written this bulletin to help answer the many questions which may arise during the planning stages of opening or reinstating a Distributive Education program.

Section I

DISTRIBUTIVE EDUCATION ORIENTATION

Vocational education in distributive occupations is designed to meet the needs of persons over 14 years of age who have entered or are preparing to enter a distributive occupation.

A distributive occupation means an occupation that is followed by proprietors, managers, or employees engaged primarily in marketing or merchandising of goods or services. These occupations are commonly found in various business establishments such as retailing, wholesaling, manufacturing, storing, transporting, financing, and risk bearing.

Distributive education provides instruction on three levels; employee, supervisory and management. This training may be offered through the high school, post-high school, and the adult in-service programs.

The high school program functions within the framework of the overall curriculum of the school. Therefore, it is a cooperative enterprise using both the facilities of the school and the marketing and merchandising resources of the community. Since most of the student placements have been in retail establishments, the instructional program has been developed largely in that area. This is not to suggest, however, that distributive education in the high school is to be labeled a retailing program. Nor is it principally concerned with the acquisition of specific skills, as an end goal, by the enrollees. The program is concerned with the realm of distribution and not solely with the beginning positions in retailing which, inevitably, are the initiating experiences for the majority of students seeking careers in distribution.

The content of the program of instruction is derived from the functions of marketing and a knowledge of products and services in reference to the occupational objective of the student. Such content is determined through the advice and consultation of the local advisory committee.

OBJECTIVES OF DISTRIBUTIVE EDUCATION

For the student . . .

1. To offer an understanding of the part distribution plays in the economy of the United States.
2. To provide an opportunity for the student to select and prepare for a career in the area of distribution.
3. To provide an educational program that includes a close relationship between theory and practice.

4. To develop the talents of the students to the maximum possible in order that the student can be ready to take advantage of opportunities in distribution as they become available.
5. To assist persons already employed to do a more effective job.
6. To have the student understand problems in human relations in order that he may cope with the problems of the consumer, employer and employee.

For the businessman . . .

1. To assist in the reduction of cost through increased efficiency of the employees.
2. To assist the businessman by helping train people for positions of leadership in the industry.
3. To develop a closer working relationship between the school and the business community.

For the schools . . .

1. To provide an opportunity for the schools to enrich its curriculum, to provide an educational program that provides practical experience with theory.
2. To provide the schools with an opportunity to develop the occupational competencies of its students.

OPPORTUNITIES IN DISTRIBUTION

The opportunities for youth in the expanding area of distribution will result from many things including: (1) the continued rapid growth and mobility of our population (2) increased physical volume of output due to a growing emphasis on plant modernization and automation (3) a rapid expansion in the introduction of new products, resulting from the recent and current acceleration of research and development expenditures (4) the broadening of world markets through increases in international trade, and (5) the dynamic and flexible nature of marketing itself.

At present, more than one half (approximately 55 per cent) of the privately employed workers in the United States are working in distributive and service occupations. According to the United States Census of 1962, more than 19 million persons were employed in retail and wholesale businesses and service establishments in the United States in 1962. The 19 million workers represented an increase of 33 per cent over the corresponding figures in 1948 and about 29 per cent of the employed civilian labor force in 1962.

Nearly 26 million young workers will enter the nation's labor market during the sixties. Estimates indicate that the number of employment opportunities in distributive and service occupations will increase more than 50 per cent by 1970 over 1960 levels. In Pennsylvania alone the

labor force of young workers is expected to increase some 14 per cent by 1970. For the most part, these young people will not have had the benefit of any realistic programs in orientation or training for vocational opportunities. It should also be made clear that the figures cited above do not include the vast numbers of young people who are: (a) employed and who will be seeking to complete their high school education; (b) discontented with their present low salaried positions and will, therefore, be seeking opportunities to qualify for advancement or more stable employment; and (c) in need of retraining because the number of jobs for which they could qualify is limited or reduced due to dynamic changes in several vocations.

Employment opportunities for young workers have increased at a phenomenal rate during the past decade. Indeed, the requirements of our changing society argue well for a continuance of this trend. Distributive education programs in the nation's high schools have also increased in number but nowhere in relation to the increase in the vocational opportunities which they seek to serve. In short, distributive education programs to prepare youth either during the terminal high school years or shortly thereafter are woefully underdeveloped in both scope and number to serve the need. The general belief is that cooperative training programs, such as those in distributive education, can do much to meet many of the needs of young adults and business alike. This belief is held by most responsible agencies and organizations conversant with current employment problems.

New programs and an expansion of proven programs are needed to help cope with the needs of youthful job seekers at the local level. Post-high school cooperative programs offer a systematic means for supervised occupational experiences for a segment of our youth that are virtually neglected. Their practical arrangements for training youth in real occupational situations make possible the identification of responsibilities and the development of attitudes required on jobs that exist in the field. Where tried, such programs have demonstrated their ability to sustain a high degree of student motivation and interest to the satisfaction of schoolmen and cooperating employers alike.

Distributive businesses vary in size from the small store that is owned and operated by the proprietor to the multi-store distributor employing thousands of people. The need for trained employees in distribution is urgent and vital.

Career opportunities can be broadly classified according to function of various departments of the store. Larger stores are organized in five broad areas, merchandising, publicity, control, personnel, and operations.

Most stores have a policy of promotion from within. Some openly state that no man has ever been appointed store manager that has not been

through its training program. This suggests that performance on the job is critical and the fact that a student did not attend college, does not prevent his advancement to more responsible and higher paying positions.

It is not uncommon at present to find students in managerial positions that received their initial training in distributive education not too long ago. One nationally known store has a training program that, assuming normal progress on the part of the student, provides a position of assistant manager upon graduation from high school.

RETAIL

The function of retailing is identified with anyone, regardless of what he calls himself, who sells a product to the ultimate consumer. Some occupational classifications in this area are salesperson, buyer, cashier, produce clerk, waitress, display man, credit authorizer, interior decorator, copy writer, training director, and stock clerk. It would be impractical to list all job opportunities since a single large department store would have hundreds of job classifications in the one retail outlet.

WHOLESALE

The function of wholesaling is identified with anyone, regardless of what he calls himself, who sells products to those whose purpose is to resell them in one form or another. Some occupational classifications in this area are salesperson, warehouse superintendent, shipping supervisor, sales engineer, broker, sales agent, resident buyer, import-export agent, receiving supervisor, and industrial salesman. These occupations may be found in businesses dealing with motor vehicles, drugs, chemicals, groceries, raw materials, hardware and any other product which requires wholesale handling.

SERVICE

The function of performing a service is intangible in nature although direct benefits accrue to those consumers or business organizations purchasing the service. Some occupational classifications in this area are salesperson, cashier, warehouse man, desk clerk, service manager, tour director, investment counselor, route salesman, recreation director, insurance adjuster, and public relations director.

The level of entry jobs in the field of distribution differs according to the degree of individual responsibility and decision-making required of the applicant. There are many starting points. Some are satisfying in themselves as career jobs. Others are necessary stepping stones to the job objectives to which the preparatory training has been directed.

Section II

DISTRIBUTIVE EDUCATION PLANS OF OPERATION

Distributive education is a vocational program of instruction. It may be organized and operated on the high school, post-high school, two-year college, and/or on the adult levels.

THE HIGH SCHOOL PROGRAM

The high school program is described as preparatory instruction—which means—preparatory to regular employment in a distributive occupation. This preparatory instruction includes both project and cooperative classes.

The project method of instruction is usually limited to the first year and involves participation activities in individual training plans and a laboratory classroom facility. A school store operated under the distributive education program shall meet the laboratory classroom facility requirement.

The term cooperative reflects the working relations between the secondary school and the business community to prepare young people for careers in distribution. Properly conceived, the classroom represents the center of the instructional program, and the employment status of the students provides the necessary training experience. The job is an avenue through which each student may apply basic concepts in practical situations. Cooperative part-time employment is viewed as a method of instruction and student earnings received therefrom is secondary to the learning process.

Instruction which is concerned with a basic body of knowledge unique to an explicit area such as distribution is regarded as an instructional discipline. The discipline identified for the preparatory distributive education program is distribution. We may utilize either the cooperative method of training or the project method of training as a means to achieve vocational competency. The discipline of distribution can be most advantageously presented in the classroom if the student can apply his knowledge, judgment skills and attitudes directly and immediately on a distributive job. Employed as a part-time worker, the student has at hand a unique, practical laboratory situation which could never be duplicated in the classroom.

Each student should have a career objective to which the instructional program is directed. This career objective should be in writing and a matter of record. This objective may either be a specific occupation or a cluster of closely related occupations in an occupational field.

Minimum requirements for a reimbursable distributive education program are described below: (All units referred to below are Carnegie Units of instruction.)

For students enrolling in distributive education during the 11th grade, one (1) unit of vocational distributive education is required.

For students enrolling in distributive education during the 12th grade, one (1) unit of vocational distributive education is required for those who have previously completed at least one (1) unit of vocational distributive education or, for those with no prior distributive education units, two (2) units of vocational distributive education is required or, for those who have previously completed two (2) units of another vocational program in a related field, one (1) unit of vocational distributive education is required.

For purposes of reimbursement no student is to be reported more than once in the event they may be enrolled in two (2) vocational programs at the same time.

All students enrolled under the distributive education program during the twelfth (12) year should be legally employed the equivalent of at least an average of fifteen (15) hours a week during the school year. Traditionally, distributive education student-learners have been granted released school time to obtain on-the-job experience. In many communities this practice will continue with the pupils attending classes in the forenoon and reporting to their training stations in the afternoon. In recent years, the advent of shopping centers and related trends have changed customers' preference of shopping hours. A more flexible schedule is now possible to meet these changes.

The distributive education program is designed to serve the needs of the individual in relation to the total economy. The well-educated individual, who is competent in his occupation, strengthens the economy through his productive ability. In this light, it is possible to offer a program of distributive education in practically every type of school organization regardless of its size or location.

In the ideal situation, first year students in distributive education are prepared for their initial jobs in the field of distribution through classroom instruction and meaningful project activities. Project activities may include such things as school store operation, marketing surveys, career objective research and many other meaningful activities including some extra or holiday employment whenever possible. Second year students therefore are well prepared for on-the-job experience and it is

recommended that these job-qualified enrollees be given an opportunity to gain supervised work experience concurrent with their classroom instruction. In those communities where employment opportunities are extremely limited or nonexistent, the second year students may be taught on a nonwork experience basis with a continuation of project activities.

The high school program in distributive education should be recognized as the beginning of training on the adult level for those who are to continue their formal education beyond the 12th grade in distribution.

THE POST-HIGH SCHOOL PROGRAM

With the advent of area vocational-technical schools (AVTS) in this state, the probability of post-high school programs in distributive education is greatly improved. Such programs in either comprehensive schools or AVTS's may be organized in the same manner as high school programs in order to meet reimbursement requirements. It is entirely possible that a 13th or 14th year program might utilize the cooperative plan during both years since the students are older and more mature. These classes shall be limited to persons who have completed or left high school and who are available for full-time study in preparation for entering, or upgrading occupational competencies in the labor market.

The instructional program at the post-high school level may be more clearly identified with a specific occupational objective in the field of distribution such as; advertising, display, midmanagement, etc. or it may be pointed at a specific type of business such as; food marketing, fashion merchandising, shoe selling etc. This is not to say that this cannot take place at the high school level, but a basic and general background is more appropriate whereas the post-high school student is generally in a better position to follow a more specific goal.

THE TWO YEAR COLLEGE PROGRAM

A program covering two (2) school years providing an average of at least twelve (12) semester hours per year of the regular schedule for vocational instruction in distribution in classes limited to the department or division of a junior college, community college, university, or other public education agency.

THE ADULT PROGRAM

Short term preparatory and supplementary classes for adults not available for full-time study leading to a specified occupational achievement or part of a series of classes leading to an occupational goal may be provided through the local educational agencies. See Section VIII for further information.

THE SPECIAL NEEDS PROGRAM

Instruction for full-time students whose occupational goals represent limited employment opportunities will be provided through appropriate programs organized and requested by local educational agencies and approved by the State staff.

ALL PROGRAMS

The local educational agency shall elect the method of operation which best meets the needs of the local community and student body after consultation with a representative of distributive education from the Department of Public Instruction. This representative will supply the application forms necessary to operate a reimbursable program of distributive education.

To contact these representatives write or call the State Supervisor or the State Advisor of Distributive Education, Department of Public Instruction, Harrisburg, Pennsylvania 17126; the Teacher-Educator or Adult Field Instructors of Distributive Education, Cathedral of Learning, University of Pittsburgh, Pittsburgh, Pennsylvania 15213; Teacher-Educator or Adult Field Instructors of Distributive Education, Ritter Hall, 4th Floor, East, Philadelphia, Pennsylvania 19122.

Section III

DISTRIBUTIVE EDUCATION REIMBURSEMENT*

The following reimbursements and financial assistance is available to all approved vocational distributive education programs.

OPERATION EXPENSE

A supplemental payment of fifty ($50) shall be paid each year for each pupil enrolled in average daily membership (A.D.M.) in vocational distributive education curriculums approved by the Superintendent of Public Instruction. (Section 2504, School Laws of Pennsylvania) This payment is limited to 100 students per full time teacher-coordinator of Distributive Education.

TRAVEL

Payment on account of approved travel of teachers, coordinators, supervisors and directors in vocational education shall be reimbursed at the rate of 80% of the sum expended by the school district. (Section 2506, School Laws of Pennsylvania) The local board is required to establish the rate of payment and approve such travel which is subject to acceptable justification and audit.

ADULT EXTENSION AND PRE-EMPLOYMENT TRAINING

Adult distributive education classes shall be reimbursed at a rate of 80% of $4 per hour for teachers or supervisors salaries which equals $3.20 per hour of instruction or supervision. The amount expended for supervisory salaries shall not exceed 20% of the sum expended for teachers salaries. (Section 2507, School Laws of Pennsylvania)

EQUIPMENT

Sales laboratory equipment, supplies, and teaching aids approved for new facilities or for replacing, updating, improving, and expanding present facilities may be reimbursed 50% for any approved course under present stipulations of The State Plan for Vocational Education.

---

* In accord with current laws and regulations.

AREA VOCATIONAL-TECHNICAL SCHOOL

In addition to the regular school district reimbursements for general aid, etc. school districts participating in the operation of an AVTS receive up to $75 per pupil cost differential between the per pupil cost for current expenses in the AVTS and the per pupil cost for current expenses in the resident high school. (Section 2504.2, School Laws of Pennsylvania)

RESEARCH, EXPERIMENTAL, DEVELOPMENTAL, AND PILOT PROGRAMS

Research, experimental, developmental, and pilot programs may be reimbursed up to 100% depending on the merits of the particular proposal. These are projects other than educational training programs which involve the development of plans, methods, and research studies, as supporting services to the educational curriculum to develop, improve, or expand vocational education in general.

Section IV

DISTRIBUTIVE EDUCATION
THE TEACHER-COORDINATOR*

The teacher-coordinator occupies a prominent position in the distributive education program since he is responsible for the instruction the students receive and for the operating procedures of the program.

If a teacher is defined as one from whom we learn, then to teach effectively the discipline of distribution the present-day teacher-coordinator must possess a high degree of professional and technical preparation. A teacher-coordinator learns about his specialized field from the technical courses in distribution and marketing and from actual experience in a distributive occupation. Professional courses in distributive education prepare the teacher-coordinator to promote, organize, and conduct the program according to approved patterns.

The teacher-coordinator recognizes that the occupational experience students receive is an essential part of classroom instruction, but that such employment does not take the place of the instruction he provides.

The teacher-coordinator must himself have occupational and educational competencies in the field of distribution. He should continue to learn more about this discipline at every opportunity, keeping up to date in this ever-changing field by working in an actual distributive occupation whenever possible during school vacations and holidays.

LENGTH OF EMPLOYMENT

The employment of the teacher-coordinator for a minimum of one month more than the regular school year is recommended for other than 12 month programs. This provides the opportunity for placement and coordination of the students in the junior class during the summer if desired; visitations to the homes of the students to explain the program and outline the parent's responsibilities; preparation and revision of the curriculum; locating and arranging for proper training stations for the students; and attending in-service workshops and official meetings in distributive education.

Local teacher-coordinators of distributive education shall provide the leadership and supervision necessary to develop and maintain the total local programs of distributive education. Their activities shall include: the initiation, organization, promotion, direction, and supervision of the secondary and/or the post secondary school and adult programs.

---

* See Pa. Teacher Certification Regulations (1961).

TIME TO COORDINATE

Local teacher-coordinators of distributive education shall perform coordination activities which include regular consultations and interviews with students, employers and advisory committee. A minimum of two class periods per day shall be made available for coordination and out-of-school activities. These two periods are usually most effective when scheduled during the last two periods of the day. Coordination time will vary in relation to the size of the community, distance to the training stations, and the number of students placed in cooperative on-the-job work experience. Additional coordination time shall be provided when local coordinators are actively engaged in organizing, promoting, and/or teaching in the adult distributive education program. Local teacher-coordinators of distributive education should cooperate fully with adult field instructors in every way possible.

SELECTION AND PLACEMENT OF STUDENTS

Students usually apply for distributive education through the guidance counselor who reviews the application and faculty recommendations, explores student interest, ability, aptitude, attendance and evaluates the student's potential. When all applications have been evaluated, the counselor confers with the coordinator to determine admission and possible placement of prospective students. Admission to the program rests finally with the teacher-coordinator of distributive education.

When a student is placed in a training station certain cooperative arrangements (preferably in writing) between the school providing the instruction and the employers providing on-the-job training through part-time employment of such student learners should be made. Such arrangements shall provide for (a) the employment of student-learners in conformity with Federal, State, and Local Laws and Regulations without resulting in exploitation of such student-learners for private gain; (b) an organized program of training on the job; (c) local coordinator or supervisor who shall direct, coordinate and supervise the program; and (d) supplemental vocational instruction in school.

Section V

DISTRIBUTIVE EDUCATION THE TRAINING SPONSOR

The training sponsor is the individual to whom the distributive education student looks for instruction and training on the job. He may be the owner or manager, or he may be a responsible individual appointed by management. Any student may have one or more training sponsors during the course of his enrollment in the program, depending upon the nature of progressive experiences provided and the size of the distributive enterprise in which the student is employed.

The training sponsor must understand the distributive education program. He should know the career objective currently held by the student under his supervision and appreciate the significance of satisfactory job performance by the student. The teacher-coordinator must recognize his responsibility to help sponsors appreciate the significance of satisfactory job performance by the student and to appreciate their unique assignment to share in the education of youth.

The purpose of on-the-job training is to apply basic knowledge in a job situation, to receive instruction and gain experience in a distributive occupation. The student thereby experiences the realities of business activity paralleling the classroom instruction. In this sense, the employing agency becomes, for the student, a laboratory situation. Job performance should be treated as a necessary step in a series of experiences which contribute to the career objective held by the student.

The importance of the job, however, must not be minimized; for it is from the environment of the training station that the student will emerge as an experienced worker. The influence of this environment will dictate to a great extent the manner in which he will think and perform as he approaches full-time employment.

Because the present job is of vital importance to the student's total career, certain measures must be taken to insure that experience on the job will be educationally sound. Above all, the student must be placed, as far as it is possible, in a training situation in keeping with his career objective. One method used to assure that instruction will take place on the job is to incorporate a written training plan as one of the operating procedures of the cooperative program.

Such an agreement may be prepared jointly by the employer and the teacher-coordinator. Therein, a definite plan of progressive experiences and learning activities, usually referred to as a schedule of experiences, is outlined for the student.

Section VI

DISTRIBUTIVE EDUCATION ADVISORY COMMITTEES

Each local distributive education program shall have an active advisory committee composed of not less than five members representing persons in the field of distribution and education. The local supervisor, director, or coordinator of distributive education shall serve as secretary of this committee and be responsible for the organization and operation of it.

The needs and objectives of the distributive education program will vary in every community and will determine the important issues with which the advisory committee will be concerned. The following list includes only a few of the many ways in which the advisory committee members can contribute to the growth and expansion of the distributive education program:

1. Suggest subjects, course content, and special emphases that should be included in high school training programs.
2. Prevent exploitation of students and assure that the total educational program is of primary concern.
3. Help establish the policy of recognizing the trained DE student by providing preferential job opportunities.
4. Inform high school students of careers in distribution.
5. Observe and participate in the high school program as speakers, demonstrators or contest judges.
6. Act as the steering committee for the adult program.

Section VII

DISTRIBUTIVE EDUCATION CLUBS OF AMERICA (DECA)

The Distributive Education Clubs of America—otherwise known as DECA—is an organization whose program of leadership and development is designed specifically for students enrolled in distributive education. Distributive education is a program of instruction which teaches marketing, merchandising and management.

Any student enrolled in any distributive education instructional program in the nation is eligible for membership in his local DECA Chapter, his State DECA organization, and National DECA. Each Chapter elects its own student officers and the DE teacher-coordinator serves as the Chapter Advisor. All Chapters within a state comprise a State Association of DECA, which is under the leadership of the State DECA Advisor. Each such unit elects student officers as leaders for that particular group. National DECA is composed of State Associations. Student delegates elected by each state in turn elect their own national officers.

DECA is a non-profit, non-political, non-sectarian, youth organization. All Chapters are self-supporting, with members paying state and national dues.

DE students have common objectives and interests. Each is studying for a specific career objective in marketing and distribution. Club activities have a powerful psychological effect upon the attitudes of students and, for many, DECA is the only opportunity which they have to participate in social activities of the school and to develop knowledge of the responsibilities of citizenship.

DECA Chapters are to DE class members what a civic or professional organization is to a group of businessmen. Chapter activities are recognized as a part of the total educational program because of their development of leadership ability, professional attitudes, better citizenship characteristics, and social growth of the individual. DECA Chapter activities are always centered in the school. These Chapter activities serve the teacher-coordinator as a teaching tool by creating interest in all phases of marketing and distribution study.

The DECA Chapter is the showcase for student achievement and progress. Through its activities, students with an interest in marketing and distribution are attracted to the DE program. No set pattern of operation is prescribed for any local Chapter; however, the majority plan activities which include social, civic, professional and benevolent

activities and adopt projects which provide for school and community betterment.

DECA activities teach DECA members to serve as leaders and followers. This organization gives them an opportunity for state and national recognition which they would not have otherwise.

The Pennsylvania Association of DECA has a Board of Trustees comprised of teacher-coordinators and the DECA State Advisor who determine policy for the club in the State. This Board of Trustees has a written constitution which is available upon request. The DECA activities that have become a tradition are: election of State DECA Officers, State Leadership Conference, Governor's Proclamation of DECA Week, State DECAmeron Newsletter, State Officers attending the North Atlantic Workshop Conference, and the National Leadership Conference. Other activities that may be held are workshops within each geographic region of the State, Regional Conferences, election of officers and meetings.

Each local program is encouraged to organize, maintain, improve, and conduct youth and young adult organizations as a part of vocational education to complement the instruction offered.

Teacher-coordinators shall serve in an advisory capacity to youth and other organizations and supervise the activities as part of the program.

Section VIII

DISTRIBUTIVE EDUCATION ADULT EXTENSION

The Department of Public Instruction, Commonwealth of Pennsylvania has four Field Supervisors of Adult Distributive Education on its staff. The Supervisors for the Eastern section of the State have their headquarters in the Distributive Education Department, Temple University, Philadelphia, Pennsylvania; and the Supervisors for the Western section have their headquarters in the Distributive Education Department, University of Pittsburgh, Pittsburgh, Pennsylvania.

DUTIES OF FIELD SUPERVISORS

1. To make available adult training programs to distributive workers throughout the State, especially in towns where there are no cooperative distributive education programs.
2. To aid the local communities in organizing adult distributive education classes.
3. To teach adult classes.
4. To aid in the recruiting of business specialists as teachers for adult classes and to coordinate and supervise these classes.
5. To aid and advise teacher-coordinators in organizing adult classes and planning course outlines.

UNDER WHOSE AUSPICES IS THE PROGRAM OFFERED?

These courses are made possible through the cooperation of:

1. The local school district and merchants
2. Temple University or the University of Pittsburgh
3. The Department of Public Instruction, Commonwealth of Pennsylvania

The classes are under the direct supervision of the local school district. A certificate is awarded to each person completing the course.

Section IX

DISTRIBUTIVE EDUCATION CLASSROOM SALES-LABORATORY

The Distributive Education facility should be at least 1,600 sq. ft. for a combination classroom-sales laboratory and/or school store. If these facilities are to be separate, it is recommended they be 850 sq. ft. each. It is not necessary to have both the sales laboratory and a school store facility, but one or the other (or a combination of both) should definitely be provided.

The educational and training experiences for students develop judgment skills and attitudes needed for career opportunities in the distributive occupations. Distributive Education provides an environment for experimentation and an opportunity to learn distribution principles and concepts.

A classroom equipped with a sales laboratory and display window will naturally require more space than the general classroom facility. The room must accommodate movable tables, desks and chairs, in addition to space allotted for the sales laboratory unit and display window. Storage area and closets should be available for related supplies and equipment as well as office space and a telephone.

Sufficient room will be needed for magazines, brochures, bulletin materials and other current publications in the field of distribution. A small curriculum library in each Distributive Education facility is helpful.

The classroom requirements of each program should be analyzed and planned to complement students' on-the-job experiences. The counsel of the Distributive Education Advisory Committee will be helpful in selecting and procuring the necessary equipment, aids, and supplies.

*MANUALS; *VOCATIONAL AGRICULTURE; *YOUNG FARMER EDUCATION; *ORGANIZATIONS (GROUPS); *YOUTH CLUBS; YOUTH PROGRAMS
OHIO; *YOUNG FARMER ASSOCIATION; YFA

In this manual, information is provided for vocational agriculture teachers and young farmer groups in organizing and developing young farmer associations. It was developed by a state supervisor from young farmer association chapters programs in Ohio. Major chapter headings are (1) The Ohio Young Farmer Association Manual, (2) Organizing the Young Farmer Association, (3) Developing a Program of Activities, (4) A Sample Schedule of Yearly Young Farmer Association Activities, and (5) Maintaining An Active Association. Possible activities for young farmer association programs listed are education, social and recreation, leadership, community service, earnings and savings, public relations, conduct of meetings, and cooperation. A sample constitution and membership card are included in the appendix. The text is illustrated with photographs. (DM)

FOREWORD

A family's standard of living is determined largely by its ability to produce or serve efficiently and then make wise decisions in using the returns of that labor for a satisfactory way of life. This is especially true with Young Farmers where family life and the farm business are so closely allied. Good farm management and judicious investments in labor saving machinery and home improvements are necessary in this highly competitive era if a satisfactory standard of living is to be maintained.

Vocational Agriculture can effectively serve these Young Farmers, both single and married, through the Young Farmer Program. Teachers, through class sessions and on-farm instructional visits, can help with the planning and development of the individual farm plans. The exchange of ideas and discussion of common problems will assist Young Farmers in keeping up-to-date technically and help them better understand community, state and national problems. Young Farmers want to become further established in farming and at the same time develop their own homes.

This means that a comprehensive, well planned program to serve Young Farmers should be in operation in every school with a Vo-Ag department. This should include a Young Farmer Chapter to serve as an FFA chapter serves the high school students in providing activities in leadership and cooperation. In addition it provides a means whereby Young Farmers can assist the teacher in developing the instructional, social and recreational phases of the program.

This YFA Manual is designed to aid teachers and Young Farmers in planning and developing a well balanced, annual program. It provides specific suggestions concerning purposes and procedures which may be used in the local association. Some attention is directed to the relationship of the local YFA to the State Association as well as to other agricultural and educational agencies and organizations.

The materials in this Manual have been secured from the programs of YFA Chapters in Ohio and other states. Many of the ideas are the result of staff discussion or the work of individual staff members. Mr. H. D. Brum, Assistant Supervisor of Vocational Agriculture, has been responsible for this revision of the mimeo YFA Manual which was issued in 1953.

WARREN G. WEILER
State Supervisor of
Vocational Agriculture

and

RALPH E. BENDER
Chairman, Department of
Agricultural Education

OHIO YOUNG FARMER ASSOCIATION MANUAL

What Is It?

The local Young Farmer Association is an organization of young men enrolled in Young Farmer classes in vocational agriculture in the public schools and community colleges of Ohio. It serves this group in a manner similar to the way the Future Farmers of America supplements the instructional program of vocational agriculture for high school students.

The Y.F.A. enriches the program of instruction beyond learning improved practices and agriculture. It provides opportunity for members to participate in a program including leadership, cooperation, community improvement, and social and recreational activities.

Who Is To Be Served In The Y.F.A.

Classroom instruction designed to help young farmers increase their operating efficiency.

Membership in the Young Farmer Association is usually open to anyone between the ages of 16 and 35 who is out of school and regularly enrolled in a Young Farmer class in agriculture taught by the teacher of vocational agriculture.

Other characteristics which are common to the Young Farmer membership are:

1. They are engaged in becoming established in the business of farming, or a closely related agricultural industry.
2. They have interests different from high school boys or older adult farmers. They have a combination of qualities which make activity appeal to them more than to

adult farmers yet they have maturity so that instruction in agriculture is of more serious and vital concern than it is to most high school boys. Most Young Farmers have distinct concerns about marriage. They are either in the process of selecting a life's companion or are faced with the problem of establishing a home of their own.

3. They desire to participate in activities which re-unite them with former high school friends.
4. They desire to associate with others who have similar interests and problems in terms of establishing a farm and family.

Young Farmer Associations determine the qualifications for active membership in the local organization. Many associations provide associate membership for those who participate in the instructional program of the group but do not qualify, because of age for example, for active membership. Honorary membership may be awarded individuals who have made special contributions to the Young Farmer program.

Why Is The Y.F.A. Needed?

The Y.F.A. Is the in-between organization that provides for continuous educational experience in agriculture from vocational agriculture in high school to adult farmer classes. Education is a process which is never completed. The need for it continues as long as one exists. Without organized programs for young farmers there would be a serious break in young mens' education in agriculture at perhaps the most critical time in their agricultural career. Young Farmer courses of instruction plus the program of the Young Farmer Association are effective means of offering young men real assistance in this critical period of becoming established in the business of farming.

A typical young farmer class discussing a current agricultural problem.

Purposes Of The Local Y.F.A.

The purposes of the local Young Farmer Associations in Ohio are:

1. To interest and aid out-of-school farm youth through a program of organized instruction to become established in farming.
2. To develop a greater appreciation of the opportunities in farming and to foster a love for country life.
3. To develop an understanding of the ways to secure and utilize the services available to farmers in improving their economic status and social and family relations.
4. To cooperate with all agencies and organizations whose objectives are the improvement of the economic, education, and social conditions of rural life.
5. To develop the leadership abilities needed to participate in desirable activities for rural young people.
6. To provide wholesome social, and recreational activities.
7. To plan and render worthwhile community services.
8. To help young people build better farms, better homes and finer families.

A typical Ohio young farm family who have profited from participation in their local Young Farmer program.

Ohio
Young Farmers Association

The Emblem

The emblem adopted by the Ohio Young Farmer Association consists of a farmstead, the risen sun, an American school, and a young man plowing with a tractor, pictured on a cross-section of an ear of corn. Atop the cross-section of the ear of corn are the letters "O-H-I-O" and inscribed within the cross-section of the ear of corn are the letters "Y-F-A" and the words "Vocational Agriculture".

Symbolism Of The Emblem

The cross-section of the ear of corn represents common agricultural interests throughout the state and nation.

The state name — OHIO — denotes the specific location of this organization.

The risen sun indicates the advancement made as Young Farmers become established in farming.

The farmstead signifies rural home life - basic to our national life.

The school with the American Flag calls attention to the fact that continued learning and the development of democratic citizenshop is essential if the farmer is to succeed.

The tractor represents science and technology, the power through which the farmer will accomplish much.

The operator of the tractor represents the Young Farmer serving his nation through his interests in tillage of the soil and his eagerness to improve through further learning and experience.

The letters, "Y-F-A", stand for Young Farmers Association, the name of the organization.

The words, "Vocational Agriculture", remind us that complete programs of vocational agriculture serve Young Farmers as well as high school boys and adults.

The official lapel pin consists of the three letters "Y-F-A" in gold. Persons eligible to wear the pin shall be young farmers in good standing with the Ohio Association of Young Farmers of America. Local chapters of the State Association may present pins to honorary members provided that they are affiliated with the State Association.

More than 300 Young Farmers and their guests enjoying a luncheon sponsored by the Ohio Tractor and Implement Company at annual conference.

History Of The Organization In Ohio

Ohio has been one of the most active states in young farmer work. The first Y.F.A. was organized in 1921-22 at Hamilton Township, Franklin County, Ohio. By 1928 there were 65 Young Farmer Associations organized with a membership of over 1200 young farmers. Growth continued until a peak of 222 associations with a membership in excess of 4500 was reached in 1940-41, just prior to World War II.

During World War II there was a marked decline in Young Farmer Associations, reaching a low enrollment of 772 members in 1945-46. Since that time there has been once again an increase in the number of Young Farmer Associations. In 1951-52 there were 61 associations with 1308 members.

A two-day state-wide conference for Young Farmers in Ohio was held at Ohio State University in 1947. The purpose of this conference was to improve and promote the Y.F.A. program. As a result of this conference, a State Young Farmer Council, composed of ten young farmers, was elected to plan the conference the fol-

lowing year and to disseminate information about the Y.F.A. program throughout the state.

The State Young Farmer Council meets following the Annual Conference.

The annual conference continued to grow. Keeping pace with this growth was an increasing interest in organizing young farmers at the state level. As a result, the Ohio Association of Young Farmers of America was organized March 3, 1951, at Columbus with the adoption of the state constitution and by-laws by delegates from all sections of Ohio. Local associations are presently receiving charters for their local organizations from the Ohio Association of Young Farmers of America.

As of May 1, 1961 there are 70 chartered chapters in Ohio.

Initiating The Young Farmer Program Start With Instruction

A teacher of vocational agriculture desiring to offer instruction in agriculture for young farmers may find the following steps useful in initiating a local Y.F.A. program:

A. Conduct a survey of all prospective Y.F.A. members in the community. This survey may be made by personal contact by the teacher, aided by an instructional planning committee. The information of this survey should reveal the farming status, interests, needs, and characteristics of prospective members.

B. From the propective group select three to seven of the most interested and capable members as a key planning committee. Carefully plan an outline of suggested activities for the key committee. Some activities might be:

1. Help in securing enrollment
2. Contact possible members and help organized travel so young farmers come to meetings in groups
3. Help plan the first meeting
4. Help prepare suggestions for a tentative program of activities to be presented at the first meeting
5. Assist in publicizing the program through newspapers, cards, letters, personal contacts, and telephone.

A local group of young farmers and their wives take part in an instructional session on life-insurance planning.

C. Call the first regular meeting. At this meeting the following could be done:

1. Start the instructional part of class for young farmers and their wives by discussing a problem which meets the needs of the group. Make this first class discussion a good one
2. With the group, plan an instructional program based upon their needs
3. Review with the entire group some of the committee findings concerning instructional and organizational needs of the group

4. If the problem of organizing presents itself, make a study of such needs with the group. Perhaps a committee could be appointed to thoroughly investigate organizing and report at a future meeting.

What Are The Advantages In Organizing?

Some advantages of organizing the Y.F.A. are:

1. It gives the group identity. This identity is essential in public relations and in promoting the activities of the group. It contributes to developing a sense of pride in the organization.
2. Organized cooperative effort is much more powerful than the combined individual efforts without planning. Organizations can conduct activities impossible by individual efforts.
3. Organization makes it possible for members to participate more directly and democratically in the affairs of the group.
4. It lessens the duties of the teacher, thereby, enabling him to do a more effective job of teaching. The Y.F.A. performs many duties in securing membership, maintaining attendance, opening and closing meetings, planning courses of study, taking field trips, etc. which are usually performed by the teacher when the young farmers are not organized.
5. It results in a broader program than agricultural instruction, including leadership, cooperative, social and recreational activities.

Young Farmer and Wives Dinner Meeting in various areas of the State help promote a strong association.

ORGANIZING THE LOCAL YOUNG FARMER ASSOCIATION

Careful planning is necessary before organizing a Young Farmer Association. The success of the organization depends upon capable leadership and a well-rounded program based upon the interests and problems of the young farmers.

PROCEDURES . . . TYPE OF ORGANIZATION

Organizing A Chapter

Active chapters of the Ohio Young Farmers Association may be established in any community where there is demonstrated need for such an organization and a vocational agriculture teacher to serve as advisor.

Certain basic criteria must be demonstrated to be true, if the efforts to establish a chapter are to be successful.

1. There must be a real need for such an organization in the community as indicated by the action of the Young Farmers themselves.
2. The vocational agriculture teacher must have sufficient time to devote to this phase of his educational program.
3. The school administration must be fully informed of the purpose of the organization and its proposed program of work. It must have a genuine interest in the welfare and success of the Young Farmers program.
4. In the organization of a Young Farmer Chapter, it seems advisable to consider the eight essentials of a good chapter. Each is self-explanatory and understandable. It would be well for each chapter to examine at least once a year its effectiveness as measured by these essentials.
   a. Interested members
   b. New, young members each year
   c. Capable officers and leaders
   d. A challenging and well-balanced program of work
   e. Distributed responsibility shared by all members
   f. A knowledge of the Young Farmers Association on the part of every member
   g. Adequate financing
   h. A strong publicity program

No definite procedure on organizing a Young Farmer Chapter can be outlined which will fit every situation in the State. It is felt, however, that a definite plan of action should be determined in each case and that the various steps listed below might well be considered.

1. Discuss the possibilities of a Young Farmers' program with the school administration and local board of education.
2. Prepare a list of all young men in the community between 18 and 25 to 30 years old who are interested in agriculture.

A local young farmer planning committee and instructor organizing their program of activities for the year.

3. Select a "key group" of about 4 to 6 young men from this list representative of every area, interest and background in the community.
   a. FFA Alumni
   b. High school graduates who did not take vocational agriculture
   c. Veterans of both the above groups
4. Have a "planning meeting" to discuss:
   a. The need for a Young Farmer Chapter
   b. Membership promotional plans
   c. Year's tentative program of work
   d. The organizational meeting

   (Each of these four items is highly important to a successful planned meeting. They are expanded upon here.)

Do you need a Young Farmer Chapter in your community?

1. What organizations already exist in the community that may appeal to young men between the ages of 18 and 30?
2. What percentage of young men on farms of this age group belong to one of these organizations?
3. What organized assistance are Young Farmers receiving to make their farming activities more profitable and more enjoyable?
4. What kind of an organization do the Young Farmers in the community want?
5. What are high school graduates for the past 10 years who are living on farms or employed in some agricultural activity doing in their spare time?
6. What community needs could a Young Farmer Chapter serve that are not now being provided in the community?
7. What cooperative benefits are Young Farmers in the community now enjoying?
8. What organized recreational and social facilities and activities are available to this group?

How should the organization meeting be presented?

1. The organizational meeting should be well-attended. Every prospective member should be personally contacted and invited and the meeting should be widely advertised.

A well-attended organizational meeting.

2. The "key group" should be encouraged to take an active part at this meeting. A Young Farmer might be appointed chairman to lead the discussion, and the agricultural teacher might choose to be in the background.
3. The organizational meeting does not necessarily have to be held at the high school. Perhaps another meeting place would be more suitable in some situations.
4. The group should discuss some of the following points and come to any decisions that seem appropriate:
   a. Is there a need for an organization of Young Farmers?
   b. Do we want to organize Young Farmer Chapters and become affiliated with the State Association?
   c. What kinds of recreational activities do you want to sponsor during the year?
   d. What kind of an educational program do we need and want?
   e. When and where shall we meet?
   f. What cooperative activities are best suited to this community?
   g. How can this group be of service to the community?
   h. How large a chapter should the community support how shall this membership be attained?

On the basis of decisions reached, temporary officers should be elected, certain committees should be appointed and a second meeting planned.

Election Of Officers

Competent, capable, enthusiastic officers are essential if any organization is to function at maximum capacity.

An effective method of securing good leaders is through the use of a nominating committee. A nominating committee, appointed by the president, is usually able to devote more time to objective thinking concerning persons best qualified for positions of leadership than is found in most nominations from the floor. With a nominating committee, however, there should be opportunity provided for nominations from the membership if they so desire. If this is not the case democratic action is prohibited and the elected officers may not receive the support of all members. In all cases the elected officers should receive the majority vote of all members. The use of secret ballots in voting is usually more desirable than open show-of-hand voting. Secret voting more nearly represents the unbiased opinions of members.

Elect new officers each year. Officers may or may not succeed themselves as desired by members, however, more members will receive experience in leadership if officers are not permitted to hold office for consecutive terms.

The most desirable time for election of officers depends upon the period of time covered by the annual program of activities. If the annual program of activities begins July 1 or in early autumn, officers should be elected in the spring or early summer. This being the situation, the newly elected officers can work with the retiring officers before taking office for a suffiicient period of time to become acquainted with their new positions of leadershp. New officers should be installed at the start of the new annual program of activities.

Duties Of Officers

Of vital importance in developing and carrying out a good program of activities are the officers. Some suggested duties of the officers in a formally organized Young Farmer Association are as follows:

President

1. Presides at all regular meetings of the local association and its executive committee.
2. Serves as an ex-officio member of all organizational planning committees.
3. Appoints all committees.
4. Provides over-all supervision and leadership of activities of the organization.
5. Counsels with advisor concerning matters of organization policy, changes, improvement or special events.
6. Represents Young Farmers in other community organizations or activities.

Vice-President

1. Presides in the absence of the president.
2. Assists the president in the duties of his office.
3. Assumes responsibilities in supervising and assisting with the activities of all standing committees. He keeps the committees active and functioning in promoting the activities of the organization.

Secretary

1. Keeps an up-to-date roll of membership containing the correct address of each member.
2. Keeps an accurate record of attendance at meetings.
3. Records the minutes of all meetings.
4. Attends to all communications concerning the organization.
5. Posts a list of old and new items of business for each meeting.
6. Assists the president in counting and recording the voting at meetings.

Treasurer

1. Attends to collecting all dues, fees, or special assessments of the organization.
2. Keeps a complete set of financial records.
3. Assists with the annual budget.
4. Assists with a program of financing chapter activities.
5. Pays all organizational fees, or debts approved for payment by the organization.
6. Gives a financial report at each meeting or as requested.

Reporter

1. Works with local paper, submitting news items of all organizational activities.

An important part of young farmer instruction is on-the-farm.

2. Keeps a record of young farmer activities. May be in form of a history, a scrapbook, or both.
3. Submit news items to other local and state Young Farmer organizations.
4. Assists with all activities in the area of public relations.

Advisor

1. Assists all officers in properly carrying out the duties of their office.
2. Consults with all committees requesting advice or assistance.
3. Provides a challenging instructional and supervisory program for members both in class and on-the-farm.
4. Assists officers in working with school officials and in other public relations.
5. Exerts an ever-present enthusiastic influence upon young farmer work.

In the informal organization the executive or planning committee assumes the responsibilities and duties performed by the specific officers in the formal type organization. The planning committee may designate members of the committee to perform the duties of the specific officers in the formalized organization. It is essential that chairman and secretary are appointed for all regular business meetings. The duties of other officers may be handled in various ways in an informal organization.

Training Of Officers

Training of officers should be a continuous process in all associations. The officers should meet in advance of business meetings to plan the meeting. The advisor should take the lead in helping individual officers achieve competency in conducting the affairs of their respective offices.

DEVELOPING A PROGRAM OF ACTIVITIES

A program of activities consists of an organized plan for developing and conducting the activities of the local association for the year. These activities should be adapted to the local community and meet the interests and needs of the members in the organization. A carefully, well-developed, challenging program of activities selected and approved by the Young Farmer Association is the first step toward developing a good organization.

Use A Check List

If the Y.F.A. is to afford maximum opportunities for the development of its members, its program must be based upon the needs and interests of the group. Problems, interests, and needs

Young farmers planning their program of activities.

of a group of young men often are not obvious to the group or the teacher of agriculture. Results of a problem check list will reveal the interests and concerns of young farmers and provide an excellent base upon which to build meaningful, and interesting programs of activity. A good instrument available for use in the Y.F.A. is "Problem Check List, For Rural Youth" by Dr. Ralph E. Bender, Department of Agricultural Education, Ohio State University, Columbus, Ohio

Methods To Use

A common procedure in Ohio is to have the planning or executive committee study the needs of the group and select the initial activities which they feel should comprise the annual program.

At a regular meeting, the committee presents the proposed activities to the organization. Members may make changes, additions, or modifications of the activities and finally accept or reject all activities in the annual program. Once the activities are accepted by majority vote they become the official program of the organization for which all members should feel obligated to carry to completion.

Another method of program planning, which is adapted to large groups, includes the use of committees in each of the different areas, Education, Social and Recreation, Cooperation, Leadership, Conduct of Meetings, Public Relations, Community Service, and Earnings and Savings, for the purpose of selecting appropriate activities. At a regular meeting each committee chairman presents the activities selected by his committee in a partcular area. These activities are discussed, amended, supplemented with additional activities, and approved or rejected by majority vote of the group.

Each planning committee appointed by the president is usually retained on an annual basis and is responsible for successful completion of all activities in their area.

A local young farmer community tractor pulling contest and barbecue.

Member Support Of Program Is Essential

Regardless of the method used, it is necessary that the final program of activities be approved by the majority of young farmers at a regular meeting conducted in the democratic tradition.

If the program becomes a vital concern to all members, they must have direct contact with and participate in the activities making up the program. Thus, all members should be on at least one committee charged with carrying certain activities to completion.

Support Of School Administration

The program of activities should be discussed with the school administrator by the association president and/or the advisor. It

should be in accord with the school policy and receive approval by the school administrator.

Dates of all meetings, banquets, or other activities should be placed on the official calendar of school events for the year. Arrangements should be made for use of the school facilities including such routine matters as having the school heated and regular use of teaching aids and equipment. The use of the school lunch room for meetings, securing the use of the agriculture room, and having the room or kitchen facilities for special events and the gymnasium and athletic equipment should also be arranged with the school administrator. It is good public relations to work with the school administrator and keep him informed of the Young Farmer program.

Program Developed Annually

It is desirable that the program of activities be developed and approved on a yearly basis. It should go into effect at the time new officers take over leadership of the organization. This may be on a calendar year basis, or it may be desirable to begin new annual programs of work in early autumn and continue through late summer of the following year. If it is preferred the annual program could follow the pattern of beginning July 1 and ending the following June 30. The program of work should be revised and improved before the beginning of each new year.

Printed Program Of Activity

The program of activity should not be developed and filed away; it should be printed or mimeographed and distributed to each member, local school administrators, and other interested parties. In addition to activities, the program might include a history of the local association, names and addresses of members, the officers, committee members, and purposes of the association.

Preparation of the program is inexpensive, especially if it is mimeographed. It does much to stimulate member-interest. In addition, copies distributed to "outsiders" constitute excellent opportunities in developing good public relations.

Many chapters list the activities according to the months in which they are to occur. With this arrangement, every member can determine, from the calendar, items of new business which should be included in each meeting.

Some Possibilities for Y.F.A. Programs

Included in the next few pages are a number of possible Y.F.A. activities classified by areas. Some suggested ways and means are stated for each activity. These ideas should be used as a guide to local Y.F.A. groups in developing their program of activities. Activities should be selected only as deemed worthwhile by the members in light of each local situation.

It is more desirable to select a few worthwhile activities and complete them well than to select too many activities and fail to carry them to completion or to do a poor job.

EDUCATION

Effective young farmer instruction is carried out on the farm of the members.

Activities	*Ways and Means*
1. Conduct a year-round instructional program for Young Farmers.	a. Committee develops a yearly schedule of instructional meetings based upon the farming problems of the group.
	b. Conduct an intensive educational program during the winter months consisting of 15-20 meetings.
	c. Plan at least one meeting each month when intensive course is not being conducted.
	d. Have membership approve the program.
2. Have three specialists or resource persons as a part of the instructional program.	a. Contact and arrange for the services of agricultural specialists or capable persons in three problem areas common to the group.

3. Have an educational film at three meetings during the year.	a. Committee work with the vocational agricultural teachers so that the films supplement the instructional program. b. Committee select and secure the film. c. Arrange for showing the film.
4. Have two or more group on-the-farm meetings per year.	a. Committee work with vocational agriculture teacher in planning on-the-farm group meetings. b. Arrange transportation for meetings. c. Make arrangements with the farm operator where the group meetings are to be held.
5. Have one instructional meeting every other month on a topic of interest to both the young farmer and their wives.	a. Committee of young farmer and wives plan the program. b. Secure a meeting place where refreshments or a covered dish dinner can be served as part of the meeting. c. Plan for recreation following the program.
6. Make a tour of the Agricultural Experiment Station.	a. Committee plan the tour. b. Secure adequate transportation. c. Promote the tour.
7. Cooperate with other agricultural organizations on education programs.	a. Keep other organizations informed of Association's program. b. Maintain contacts with other groups.
8. Each member develop a useful library of agricultural publications.	a. Advisor provide lists of sources of technical information, bulletins, books, pamphlets, etc.
9. Keep informed on local school conditions.	a. Have local superintendent or school board member address the group. b. Have county superintendent speak to group.
10. Discuss social and civic problems.	a. Identify interests and needs of the group. b. Make use of specialists and resource persons.

SOCIAL AND RECREATION

The judges enjoy this task of selecting the best cake at Young Farmer Camp.

1. Have annual banquet in March.	a. Committees make arrangements for place, meal and program.
2. Sponsor Halloween party.	a. Invite wives or girl friends. b. Committees to arrange for program and refreshments.
3. Have recreation after instructional meetings.	a. Committee to secure use of gym and equipment. b. Plan organized program.
4. Take a trip to see a major league ball game.	a. Committee to select game, secure tickets, and arrange transportation.
5. Organize a basketball, volly ball team, or bowling team.	a. Committee to enter team in league. b. Members to attend and support the team.

6. Sponsor co-ed recreational activities.	a. Have at least three meetings at members' homes. b. Summer picnic planned by recreation committee for members' families. c. Have a square dance.
7. Have a bowling party.	a. Committee to make arrangements for place and time.
8. Sponsor a fall and spring square dance.	a. Committee to arrange for place, tickets, publicity, music and refreshments.

LEADERSHIP

A State Young Farmer of the Year and his wife. His Vocational Agriculture instructor in the background.

1. Send two delegates to the State Y.F.A. Conference.	a. Select delegates one month before conference. b. Y.F.A. pay a part of expenses.
2. Have Vo-Ag graduates become Y.F.A. members.	a. Invite eligible high school graduates to special May meeting. b. Members to give personal invitations to prespective members. c. Have a joining Y.F.A.-F.F.A. social event.
3. Attend meetings of other organizations.	a. Have members report to group the activities of other organizations. b. Y.F.A. assist in promoting worthwhile programs.
4. Elect officers in March.	a. President to select a nominating committee to select a slate of officers. b. Officers to be ballotted on at annual banquet.
5. Publish a Y.F.A. program of activities booklet.	a. Reporter to assemble the activities of committees and edit program. b. Have program published and distributed to members and interested persons.
6. Prepare Y.F.A. map.	a. Secure map of county at County Engineer's office. b. Frame map and hang on wall with buttons showing location of members' farms.
7. Hold an Officers' Training School.	a. Old officers give suggestions for conducting the office. b. Have F.F.A. team demonstrate parliamentary procedure.
8. Furnish members with a means of identification.	a. Have membership cards printed. b. Issue cards to members when dues are paid.
9. Improve leadership ability of young farmers.	a. Have panel discussions. b. Have reports given by members. c. Have members join the other farm organizations. d. Sponsor public speaking contest. e. Practice parliamentary procedure.

COMMUNITY SERVICE

1. Participate in State and County Fairs.
   a. Members under 21 years of age exhibit agricultural products and livestock in the Junior Fair.
   b. Members to enter exhibits in Senior Fair.
   c. Investigate possibility of developing division in local or county fair for Young Farmers and aiding the F.F.A.
2. Conduct farm safety campaign.
   a. Members assist with safety survey.
   b. Members to check list for fire hazards around their homes.
   c. Distribute bulletins on accident prevention.
3. Cooperate with all community service projects of other groups.
   a. Keep other groups informed about the Y.F.A. program.
   b. Assist other groups with worthwhile community projects.
4. Conduct a clean-up campaign.
   a. Prepare and distribute a clean-up check list.
   b. Members to place into operation a clean-up campaign on their own farms.
5. Conduct demonstrations-crops and livestock.
   a. Members place in operation new ideas.
   b. Hold tour to see results.
6. Conduct a program of week control.
   a. Provide chemical spray.
   b. Secure services of others in eradicating especially noxious weeds.
7. Conduct campaign for school bond issue.
   a. Hold special discussion meeting.
   b. Make individual contacts.

EARNINGS AND SAVINGS

1. Have local association set up and use an annual budget.
   a. Earnings and savings committee set up a budget.
      (1) Determine expenses to be encountered from program of work.
      (2) Select fund raising activities to bring in estimated income needed.

	b. Earnings and savings committee set up ways and means to earn money for chapter. c. Individual members present ideas for raising funds.
2. Have Y.F.A. operate with a cash balance in treasury.	a. Payments to be made must be authorized by the association and approved by advisor. b. No obligations made except by authorized persons. c. Select auditing committee and have treasurer's books audited anually. d. Pay all bills promptly. e. Treasurer reports monthly or as requested.
3. Have chapter dues.	a. Set up dates for collection of dues. b. Association determine amount of dues by majority vote.
4. Develop an organized schedule for earning the amount of money required to adequately carry out program of activities.	a. Committee determine the amount of money required. b. Secure Association approval of methods to use in earning money. c. Post a list of fund-raising activities, giving the dates, committees, ways and means, etc., for each activity.

PUBLIC RELATIONS

Many local groups have an annual summer field day as a part of their program of activities.

1. Submit news articles to the local paper. (One article every week during intensive educational program and one article per month the remainder of the year.)	a. Reporter, with help of committees, write article of Y.F.A. activities. b. Have program of activities challenging enough to provide newsworthy material for the Reporter.
2. Give two programs before community organizations.	a. Public relations committee prepare the programs. b. Public relations committee arrange with organization for time and place; give adequate publicity to event, both before and afterwards.
3. Participate in one radio or television program during the year.	a. Public relations committee to make arrangements. b. Publicize program in local community.
4. Promote annual achievement banquet to highlight year's activities.	a. Show pictures of Y.F.A. activities either in film strips, slides, or movies. b. Members tell Y.F.A. activities. c. Members plan the program.
5. Recognize Honorary Young Farmers.	a. Elect a minimum of one each year. b. Confer the Y.F.A. Honorary membership at the banquet. c. Recognize individuals who made an outstanding contribution to the Y.F.A.
6. Distribute copies of the local program of work to local businessmen and to school officials.	a. Public relations committee to handle distribution. b. Y.F.A. to mimeograph copies for distribution.
7. Contribute at least two news articles per year to the Ohio Young Farmer News.	a. Public relations chairman submit articles and photographs to the Ohio Y.F.A. News.

CONDUCT OF MEETINGS

The Executive Secretary-Treasurer congratulating the five outstanding State Young Farmers of The Year.

1. Hold regular scheduled meetings; weekly during intensive instructional period and at least monthly the remainder of the year.
   a. Prepare a schedule of meetings and topics to be discussed and receive approval of school administrator.
   b. Have dates placed on school calendar.
   c. Have meetings start on time.
   d. Executive committee plan for all meetings.
2. Hold executive committee meetings monthly.
   a. Hold regular scheduled meetings at a definite time and place.
   b. President or Chairman to notify all committee members at least one day prior to meeting.
   c. Teacher or Chairman have definite plans ahead of meeting.
3. Have 90 per cent attendance at all meetings.
   a. Have all meetings carefully planned.
   b. Present top-notch instructional programs.
   c. Secretary post notices of all meetings.
   d. Committee arrange for refreshments and entertainment at selected meetings.

	e. Contact members after they have missed meetings.
4. Provide special training for newly elected officers.	a. Old and new officers meet to develop local training program for new officers. b. Organize and conduct officers' training meeting for new officers. c. New officers work with old officers for at least six weeks before assuming duties of their new office.
5. Use good business procedure at all regular meetings.	a. President or Chairman follow the business agenda as outlined in the manual. b. Use Stewart's *Parliamentary Procedure* and official manuals as basis for procedure of meetings. c. Practice praliamentary procedure as needed. d. Advisor give report on procedure at close of certain meetings. e. Install officers using a ceremony which represents the duties of the various officers.

COOPERATION

A group of wives at Young Farmer Camp making wood fibre flowers.

1. Cooperate with local school administration.	a. Have annual program of activities approved by school administration. b. Have Y.F.A. meetings and events listed in the official school calendar of events. c. Assist school in all worthwhile activities which the Y.F.A. could help promote.
2. Cooperate with the local F.F.A. Chapter.	a. Cooperate with F.F.A. Chapter in promotion of social and recreational events. b. Cooperate with the F.F.A. in contributing to at least one altruistic non-school organization. c. Cooperate with the F.F.A. in an officer training program. d. Hold at least one joint meeting with the F.F.A. e. Conduct one joint educational tour with the F.F.A.
3. Cooperate with other Y. F.A. organizations in the state.	a. Invite at least one neighboring Y.F.A. organization to attend a local Y.F.A. meeting. b. Visit at least one other Y.F.A. meeting as a group. c. Plan and take part in one field day or other special Y.F.A. event on a county or district basis. d. Attend State Y.F.A. Convention.
4. Cooperate with other community organizations.	a. Assist other organizations in carrying out worthy community or agricultural ventures.
5. Have 100 per cent of the members to actively participate in one or more cooperative buying and selling activity.	a. Y.F.A. members pool orders for: (1) Livestock supplies (2) Crop supplies (3) Other miscellaneous supplies b. Have Secretary keep posted on the bulletin board price and special opportunities offered by cooperatives. c. Have representatives of Cooperative speak at Y.F.A. meeting.
6. Cooperate with other worthwhile community organizations.	a. Work with all organizations in worthy community or agricultural ventures.

SAMPLE SCHEDULE OF YEARLY Y.F.A. ACTIVITIES

The ladies enjoy craft activities at Young Farmer Camp.

Month	Number Instructional Meetings in Agriculture	Number Business and/or Special Activity Meetings	Nature of Special Activity
January	3	1	Discussion by Guest Speaker "Moral Problems of Young men"
February	3	1	Joint Meeting of Young Farmers and their wives on "Family Insurance Planning"
March	1	1	Y.F.A. Banquet
April	1	1	Discussion by Guest Speaker "Problems in Establishing a Family"
May	1	1	Beautify School Grounds Y.F.A. Square Dance
June	1	1	Film and Discussion - "Highway Safety"
July	1	1	Farm Tour and Picnic

August	1	1	Swimming Party and Softball Game
September	1	2	Y.F.A. Hayride and Weiner Roast "Joint Financial Planning"
October	2	1	Discussion of Civic Problem, such as "The School Bond Issue"
November	3	1	Report on State Y.F.A. Convention Exchange Meeting with the neighboring Y.F.A.
December	3	1	Potluck Supper or Christmas Party
Total	21	13	

MAINTAINING AN ACTIVE ASSOCIATION

An Active Expanding Membership

A basic requirement of a good Young Farmer Association is active, interested members. Most good associations have each member on at least one committee charged with planning and carrying through to completion activities of the organization. Activity by all members is necessary for interested members.

An alert organization is always interested in increasing its membership. Young Farmers should continually contact prospective Young Farmers in their communities. Special effort should be devoted to enrolling vocational agriculture students who graduate from high school or who withdraw from school before graduation. New members add new life to the organization.

Representatives of an outstanding Chapter with the Chapter Award Plaque.

Well Planned Meetings

All meetings should be carefully planned in order that business be clearly presented and properly handled. The Y.F.A. officers or executive council should meet prior to each business meeting to plan the agenda.

Meetings should start and adjourn as scheduled. The meetings should be well-balanced, having sufficient time for business, special events, social and recreational activities. Most business meetings should be followed by refreshments and a social hour.

Many Young Farmer Associations have business meetings once a month while other associations have business meetings as needed in conjunction with the organized instructional program. If the

latter is followed, the instructional period is reduced to allow sufficient time for business.

Special programs, discussion groups, guest speakers, social events, etc., other than instruction in agriculture, may be used effectively to supplement the business meeting.

Meet On Year-Round Basis

Associations should meet on a year-round basis, concentrating most organized instruction during the winter months and continuing to meet monthly during the remainder of the year. Associations which suspend activity during the summer months often find that enthusiasm has cooled when autumn arrives.

Refreshments following class session help increase attendance.

Have Adequate Financing

A systematic program of financing is necessary if Young Farmer Associations are to carry their program of work to successful completion. Each association should plan carefully its annual budget according to the needs of the chapter, as revealed by the program of activities and in line with available acceptable methods of raising money for the association. A carefully-planned program of raising funds should be developed and approved by the association. Care should be exercised against raising money in any way that would not meet with wholehearted school and community approval.

As a general rule the association should not engage in large scale business operations which involve extensive sums of money. The Young Farmer Association is primarily an educational program for the development of its members.

Associations usually find it wise to establish a small membership fee. Payment of membership dues stimulates interest in an organization; it makes for a closer feeling of belonging. At the same time, it provides funds for refreshments, recreation, and other expenses. Care should be taken that the membership fee is not so large as to discourage some individuals from belonging to the association.

Use Of Ritual

Some associations feel that ritual used to open and close meetings adds interest and prestige to the meetings. If this seems desirable to the group, committees should be appointed to develop appropriate ritual based upon Young Farmer purposes and symbolism. The F.F.A. ritual could be used as an aid in the form of the ritual.

Working With Other Organizations

The Y.F.A. can improve its program and at the same time make a greater contribution toward improving farming and rural living by working cooperatively with other local organizations. Certain activities, particularly those of an agricultural nature, can be carried out effectively in cooperation with the local chapter of the F.F.A.

The Y.F.A. should cooperate with agricultural organizations such as the Farm Bureau, the Grange, Agricultural Extension, Soil Conservation, and church groups in promoting community-wide programs that result in progressive communities, better standards of living and improved agriculture.

Often the Y.F.A. can cooperate with the home economics group for out-of-school young people or rural community clubs in the promotion of worthwhile civic, social and recreational activities. An example of a cooperative program with home economics follows:

Time	*Young Men*	*Young Women*
7:30 to 9:00	Young farmers engaged in organized instruction in agriculture in a class taught by the teacher of vocational agriculture.	Young women in home economics class taught by teacher of home economics.
9:00 to 9:30	Both groups meet together in the auditorium. The program may include group singing, amateur dramatics, special speakers, social or recreational events, or a discussion forum. A variety of programs may be planned for joint meetings.	

The Y.F.A. should always be alert to opportunities to contribute to worthy community efforts through cooperation with all other groups interested in improving rural community living or promoting the best community agricultural interests.

Relationship Of Local To State Associations

The Ohio Association of Young Farmers of America is the state organization which coordinates the efforts and activities of

the local Associations. Through its influence, the local organizations have additional strength and prestige. Each local Young Farmer Association should meet the qualifications for membership in the State Association as quickly a possible and take the necessary steps to secure its charter.

Some outstanding events sponsored by the State Association are the Annual Conference, Young Farmer and Wives Camp, and Annual State Tour.

At the conference timely helps in solving agricultural problems are presented by experts in the various areas of agriculture. In addition, plans and programs are devised for improving and expanding activities for Young Farmers in Ohio. An important feature of the conference is the selection of the State Council of the Ohio Association of Young Farmers. These young men strive to acquaint the public with the work of the organization and take the initiative in developing a worthwhile state program which will foster further development of local Young Farmer Associations. They are available to meet with or otherwise aid local groups.

A general discussion on "Family Financial Planning" at the Annual State Young Farmer and Wives Camp.

Sample

Ohio Young Farmers Association

PROGRAM OF ACTIVITIES

January 1 - December 31

A Young Farmer and his son, future agricultural leadership in the making.

Leadership

1. Recognize chapters that have outstanding young farmer programs. Give awards at State Convention, February.
2. Select outstanding Young Farmer in each supervisory district. (Dues paid for 3 chapters.) Give recognition at State Convention, February.
3. Select outstanding Young Farmer in State - Give recognition at State Convention, February.
4. Camp Muskingum, second week-end in September - Young Farmers, wives, teachers.
5. Exchange visits with other states at camp or annual convention.

6. Council members visit young farmer meetings in their area.
7. Conduct area young farmer and wives dinner meetings.

Public Relations

Publish **Ohio Young Farmer** February 1, May 1, August 1, and November 1. Distribute to membership.

Improve Ohio Young Farmer through use of pictures, cartoons, graphs, and print front page.

Invite radio and news editors to Y.F.A. Camp.

Publish directory of local officers in May.

State Organization

Select council members at Annual Convention.

Organize council at time of Annual Convention.

Hold council meetings at convention, camp, April and December.

Provide local organizations with membership cards.

Provide awards for chapter and individual recognition.

Collect annual dues of 50 cents per member.

Hold annual tour in August.

Registering at the Annual Conference.

Securing The Charter

Local associations of young farmers shall apply through H. D. Brum, Executive Secretary-Treasurer, Ohio Young Farmers Association, 220 South Parsons Avenue, Columbus 15, Ohio, to the State Council for affiliation with the Ohio Young Farmer Association. Applications are to be signed by the local president, the sec-

retary, and the advisor. The following need to accompany the application for the charter:

1. A copy of the proposed constitution and by-laws
2. A copy of the annual program of work
3. The number of active members
4. Submit Ohio Young Farmers Association Annual Chapter Membership and Dues Report
5. A list of chapter officers and address of each
6. A remittance of $1.00 to cover the cost of printing and mailing the charter.

The charter will be approved by the officers of the State Council at their next meeting, provided the proposed chapter constitution is in accord with the constitution of the Ohio Association and that it otherwise meets the standards established for Young Farmer groups. The charter will be signed by the state president and the state advisor.

APPENDIX

CONSTITUTION AND BY-LAWS
THE OHIO ASSOCIATION OF YOUNG FARMERS OF AMERICA

Adopted March 3, 1951

Amended February 25, 1961

ARTICLE I — Name and Purpose

Section 1. The name of this organization shall be the Ohio Association of Young Farmers of America.

Section 2. The purposes of this organization are as follows:

a. To interest and aid out-of-school farm youth through a program of systematic and organized instruction to become established in farming.

b. To develop a greater appreciation of the opportunities in farming and to foster a love for country life.

c. To develop an understanding of the ways to secure and utilize the services available to farmers in improving their economic status and social and family relations.

d. To cooperate with all agencies and organizations whose objectives are the improvement of the economic, education and social conditions of rural life.

e. To develop the leadership abilities needed to participate in desirable activities for rural young people.

f. To provide wholesome, social and recreational activities.

g. To plan and render worthwhile community services based on the needs of the community.

ARTICLE II — Organization

Section 1. The Ohio Association of Young Farmers of America is a State organization for out-of-school young men who are engaged in farming. It shall consist of affiliated local chapters that are chartered by the State association and organized in conformity with its constitution and by-laws.

Section 2. Chapters of Young Farmers of America shall be chartered only in schools where recognized systematic instruction is offered for out-of school young farmer groups under the provisions of the approved State Plan for Vocational Education.

Section 3. Delegates from active chapters shall meet in State convention, organize, adopt a constitution and by-laws, elect a council, and set up a State program of work.

Section 4. Local chapters may become and remain affiliated with the State association by complying with the procedures outlined in the by-laws.

ARTICLE III — Membership

Section 1. The members of this organization, shall be of three kinds, — active, associate and honorary.

Section 2. Active Membership.

Any young man 16 to 30 years of age who is out of school and enrolled for instruction in a young farmer class is eligible to be-

come an active member of the local Young Farmer Association. He must, however, receive a majority vote of the members present at any local chapter meeting.

* Amended February 25, to read — any young man 16 to 35 years of age.

Section 3. Associate Members.

Following the termination of active membership status, a young farmer may become an associate member without voting or office-holding privileges, provided, however, they participate in the systematic program of instruction for young farmers.

Section 4. Honorary Membership.

Individuals who have made an outstanding contribution to the young farmer program and to the general improvement of agriculture may, upon recommendation of the State Council, be elected to honorary membership by a majority vote of the members present at any state convention. Honorary members shall neither vote nor hold any office.

ARTICLE IV — Officers

Section 1. The Officers of the Ohio Association of Young Farmers of America shall be: President, Vice-President, Secretary, Executive Secretary-Treasurer, and Adviser. Elective officers of the association shall be elected annually by the State Council from among its membership. The organization meeting will be held immediately following the election of new Council members at the State Convention. The State adviser shall be the State Supervisor of Vocational Agriculture or someone selected by him. The executive secretary-treasurer shall be a member of the supervisory staff.

Section 2. The control of the organization shall be vested in a State Council consisting of ten members each of whom shall serve for a period of two years. Council members are not eligible for re-election.

Five members shall be elected each year at the annual meeting by delegates selected from local chapters. One council member shall be selected each year from different areas of the State — N.E., S.E., N.W., S.W., and Central from nominations made by local chapters.

ARTICLE V — Meetings

Section 1. A convention of the Ohio Association of Young Farmers of America shall be held annually at a time and place to be determined by the State Council.

Section 2. Two delegates from each chapter in good standing shall be elected annually from the active members to represent the chapter at the State convention.

Section 3. Business of the association may be transacted by delegates at any regularly scheduled state wide meeting.

Section 4. A quorum for the Council shall consist of at least half of the members of the Council. A quoroum must be present at any meeting at which business is transacted or a vote taken making recommendations to the association.

Section 5. Parliamentary procedure at all meetings of this association shall be in accordance with Roberts' Rules of Order.

ARTICLE VI — Dues

Section 1. Annual membership dues in the State association shall be fixed by the State Council, subject to approval by a majority vote of the delegates present at the State Convention of Young Farmers of America.

Section 2. A Small registration fee for delegates and others in attendance at the state convention shall be established by the State Council.

Section 3. The dues of any local chapter shall be fixed by the Chapter Executive Committee, subject to approval of a majority vote of the active members of the chapter.

ARTICLE VII — Emblem

Section 1. The emblem of the Ohio Association of Young Farmers of America shall be made up of the following symbols:

a. A farm tractor and operator in the foreground representing tillage of the soil the basis of modern American Agriculture,

b. the rising sun over a typical farm background scene, representing progress, and

c. a public school building denoting the importance of public school adult education to agricultural progress,

d. a cross section of an ear of corn, representing common agricultural interest.

e. The emblem shall also carry the three letters "YFA" and the words "Agriculture Spearhead to Progress" and "Vocational Agriculture".

Section 2. The official lapel pin shall consist of the three letters "YFA" in gold. Persons eligible to wear the pin shall be young farmers in good standing with the Ohio Association of Young Farmers of America. Local chapters of the State association may present pins to honorary members provided said local groups are affiliated with the State association.

ARTICLE VIII — Amendments

Section 1. Proposed amendments to the State constitution or by-laws must be submitted in writing by authorized representatives of a local chapter of Young Farmers of America to the State Council at least 60 days prior to the state convention. Proposed amendments will be reviewed by the State Council. Then, if in order, will be submitted to local chapters in the state at least one month before the next annual state convention. Proposed amendments will be presented to the delegates in the State Convention by the Council with their recommendations. When this procedure is followed, amendments to the State constitution or by-laws may be adopted at any State convention by a two-thirds vote of the delegates present.

BY-LAWS

ARTICLE I — Duties of Officers

Section 1. *President.* It shall be the duty of the president to preside at meetings of the State Association of Young Farmers of America and to serve as chairman of the State Council. The president shall appoint all committees and may serve as an ex-officio member of these committees. He shall call a State convention each year at such time and place as shall be decided by the State Council.

Section 2. *Vice-President.* It shall be the duty of the vice-president to preside at all meetings of the association in absence of the president and assist the president at all times in carrying on the work of the association.

Section 3. *Secretary.* It shall be the duty of the secretary to keep minutes of the meetings of the association and of the State Council.

Section 4. *Executive Secretary-Treasurer.* It shall be the duty of the Executive secretary-treasurer to keep a roster of the active and honorary members, carry on the correspondence of the association, and fulfill such other duties as usually pertain to that office. He shall collect and disburse all funds authorized by the association and maintain complete and accurate records of all transactions. He shall review applications for charters and issue charters. He shall present to the association an annual financial statement of the condition of the treasury.

Section 5. *Adviser.* The State adviser is the ex-officio member of all committees. He is an active member of the State Council of Young Farmers of America and assists State officers in conducting

meetings and other affairs of the association. He reviews action taken by all committees and the State convention to determine whether or not they are in conformity with policies, plans and regulations pertaining to the program of agricultural education as approved by the State Board for Vocational Education.

Section 6. *Council.* The Council shall conduct the business of the State association, subject to such regulations, by-laws, and State program of work as have been adopted by delegates, and in conformity with the policies and plans governing the administration of vocational agriculture in the state.

ARTICLE II — Committees

Section 1. The president of the Ohio Association of Young Farmers of America shall appoint three regular committees regularly: The Nominating Committee, the Auditing Committee, and the Program of Work Committee. Other special committees may be appointed.

Section 2. The Nominating Committee, after careful consideration of the Young Farmers of America personnel, shall place in nomination candidates for the five vacancies on the State Council.

Section 3. The Auditing Committee shall examine annually the books of the secretary-treasurer and report their findings to the delegate body assembled in State Convention.

Section 4. The Program of Work Committee shall set up the objectives and goals of the State association and suggest ways and means of attaining them.

ARTICLE III — Procedures

Section 1. Issuing charters to chapters

Local chapters of Young Farmers of America shall apply through the State adviser to the State Council for affiliation with the State Association of Young Farmers of America. Such application shall be signed by the chapter president, the secretary, and the local adviser. The following material shall accompany the application for a chapter charter:

1. A copy of the proposed constitution and by-laws
2. A copy of the annual program of work
3. Annual membership and dues report
4. A list of chapter officers and address of each
5. A remittance of $1.00 to cover cost of printing and mailing charter.

A charter shall be granted by the officers of the State Council at its next meeting, provided the proposed chapter constitution is in accord with the constitution of the State Association of Young Farmers of America and that it otherwise meets the standards established for Young Farmer groups. The charter will be signed by the State president and the State adviser.

The delegates at any State convention shall have the power to suspend chapter charters upon receipt of evidence of infringement on provisions of the State constitution.

Section 2. Determining standing of chapters

A local chapter of Young Farmers of America shall be considered in good standing with the State Association of Young Farmers provided the following general conditions are met:

1. Local members are enrolled each year in a course of systematic instruction in agriculture organized for young farmers by a regularly employed instructor of vocational agriculture.
2. The local chapter constitution is in accord with the State constitution.
3. The activities of the chapter are in harmony with the purposes of the State association.
4. That programs of work are submitted to the State adviser as requested.

5. The chapter has submitted a copy of the annual membership and dues report together with dues for the current year to the Executive Secretary-Treasurer.

In the event a chapter is not in good standing at the time of the opening of the State convention, the delegates in the convention shall have the power, on the recommendation of the State Council, to withdraw or suspend its charter and refuse such chapter official representation at the annual State convention. When, and if, such action is taken, the members of the chapter in question shall be denied the regular privileges of the association. By meeting the requirements for good standing, a chapter may be reinstated by action of the State Council not earlier than 10 days after the close of the State convention during which it was not in good standing.

ARTICLE IV — Meetings

Section 1. Regular and special meetings of the State Council shall be held at such time and place as determined by the State adviser and a majority of the other members of the State Council.

Section 2. Special meetings of the State association may be called at any time by the State president with the approval of the State adviser and a majority of the other members of the State Council.

Section 3. The order of business at regular meetings shall be: Call to order, roll call, reading of the minutes, reports of officers and committees, unfinished business, new business, special events, and adjournment.

OHIO

Factors relating to the school district organization for a vocational school and intermediate district are briefly discussed. Table 1 presents recommended minimum and optimum enrollment for vocational schools listed by vocational areas and number of different programs with normal and maximum enrollment. Table 2 presents the size of joint vocational or intermediate districts for vocational schools including the number of vocational pupils needed, total pupils in grades 11 and 12, and total pupils in the intermediate school district. Table 3 presents the reommendations for various sizes of school enrollment itemized by number of programs, capital outlay per pupil, and operating cost per pupil. Two conclusions were that the minimum enrollment for a vocational school should be approximately 600 pupils and the minimum enrollment for a joint vocational school for an intermediate district should be approximately 15,000. Division of Vocational Education Ohio State Department of Education
Columbus 15, Ohio

The Vocational School and the Intermediate School District

From the beginning of free public education in the United States, with the little one-room school house in which the teacher taught all of the subjects to all of the pupils, there have been periodical movements to increase the size of the school district. These movements have not taken place simultaneously over the nation. One part of the country may have been adopting one plan while some other part may have been in the innovating step of another. In essence, it has been a continuous movement for the nation as a whole. The American drive to be the best in business and industry has had its counter part in education. The desire to keep the quality and quantity of education abreast with the growth of the rest of man's activities and environment has been concurrent with the recognition that the standard of living, the strength of the nation and the leadership role of the people are directly related to the education of the citizenry.

Why did the one-room school house exist? Sparsity of population, time consuming means of transportation, low tax base, and limited education curriculum were at least some of the factors.

As roads and highways improved and better and faster means of transportation were developed, the larger school districts became a possibility. With increased size of school districts, a greater pupil population could be brought into one district. Then homogeneous groupings could be made, teachers could specialize, class size could be made large enough to justify new and improved facilities, full utilization of facilities could be made to justified expansions, costs were reduced and the tax bases could be made large enough to provide finances.

Corresponding to this problem in academic education, there is a parallel circumstance involving vocational education. A small district does not have sufficient tax base to furnish capital outlay for vocational education shops and laboratories. Pupil enrollments are too small for classes and, therefore, costs are high. Enrollments are too low to provide realistic programs with a breadth of offering to meet occupational demands.

The Size of the Vocational School

What should be the size of a vocational school? At least three factors should be considered: (1) breadth of program, (2) costs, and (3) pupil travel time. Table 1:--Recommended Minimum and Optimum Enrollments for Vocational Schools, presents the number of programs in each of the vocational areas for recommended minimum and optimum size vocational schools. It also presents normal and maximum enrollments for such centers. It also presents normal and maximum enrollments for such centers. Table 2:--Size of Joint Vocational or Intermediate Districts for Recommended Vocational Schools, presents pupil populations of such districts to produce the enrollments for recommended minimum and optimum size vocational schools. Item "2" assumes that approximately 33 1/3% of the graduating class continue to post high school higher education and that vocational education will be provided in grades eleven and twelve for 50% of the non-college bound. Item "3" is 8.2 times item "1". This is the ratio of total enrollment, K-12, to grades eleven and twelve. Item "3" is the needed pupil population of a joint vocational or intermediate district for a minimum vocational school and the size of the district which can justify an optimum scope of vocational offering. Joint vocational or intermediate districts can serve a larger student body but should consider more than one vocational center as the school district student population approaches 70,000. This would produce two vocational schools of approximately 1400 pupils each.

Table 1:--Recommended Minimum and Optimum Enrollments for Vocational Schools

Vocational Areas	Minimum Size School			Optimum Size School		
	No. Different Programs	Enrollment		No. Different Programs	Enrollment	
		Normal	Maximum		Normal	Maximum
Agriculture Education	2	70	100	6	210	300
Business Education	3	120	150	9	360	450
Distributive Education	1	20	30	3	60	90
Home Economics Education	1	40	50	3	120	150
Trade & Industrial Education	5	200	250	15	600	750
Total	12	450	580	36	1350	1740

Table 2:--Size of Joint Vocational or Intermediate Districts for Recommended Vocational Schools

Item	Minimum Population	Optimum Population
(1) Vocational Pupils From Table 1	580	1,740
(2) Total Pupils Grades 11 and 12	1,740	5,220
(3) Total Pupils Intermediate School District	14,268	42,804

Minimum Enrollments

Table 3:--Recommended Vocational Programs and Related Information for Illustrative Schools of Various Sizes, summarizes the number of programs, capital outlay per pupil and operating cost per pupil for each school as presented in tables 4-19.

Most shops and laboratories can accommodate fifty pupils in two sections. A drafting room can accommodate sixty pupils, but a cosmetology laboratory can accommodate only forty. Therefore, if we divide the enrollment of a vocational school by fifty, we will obtain the approximate number of different programs that the pupil population can support with full utilization of the facilities; see item "1", table 3.

Table 3:--Recommended Vocational Programs and Related Information for Illustrative Schools of Various Sizes

Item	Pupil Enrollment							
	408	620	1,004	1,379	1,719	2,109	2,339	2,779
(1) Enrollment ÷ 50*	8	12	20	28	34	42	47	56
(2) Number Different Programs	15	16	22	27	33	36	39	41
(3) Capital Outlay Per Pupil	$3,994	$3,136	$2,858	$2,589	$2,500	$2,453	$2,415	$2,363
(4) Operating Cost Per Pupil	$ 519	$ 517	$ 480	$ 479	$ 477	$ 474	$ 478	$ 467

*Maximum number of programs for pupil enrollment with full utilization of building.

Start with a school enrollment of 1,379, see table 3. The enrollment divided by fifty gives twenty-eight programs. The table further shows that as the schools become smaller, the different programs which the enrollment will support decreases to 12 then 8. A study of tables 4-19, shows that as schools become smaller, the breadth of the program must be reduced to those common areas of training with greatest employment. In order to minimize this reduction in the breadth of programs in the illustrative schools of less than 1,379 enrollment, class size has been reduced and grade levels combined. This consequently reduces the utilization of the building and increases the capital outlay per pupil, $2,589 - $2,858 - $3,136 - $3,994, and operating cost per pupil, $479 - $480 - $517 - $519. As we go below an enrollment of 620 pupils, in the vocational center, a satisfactory breadth of program can be maintained only by increasing the cost.

Optimum Enrollment

Table 3 also shows that, as schools become larger, the number of different programs, see item "2", increases 33, 36, 39, then 41. The enrollment

divided by fifty produces more programs, 34, 42, 47, then 56, than are offered in the illustrative schools. A study of tables 4-19 further shows that as schools become larger, the breadth of the program can increase into those areas with lesser employment. Although the increased enrollment gives sufficient program selection by pupils to justify opening new courses, it also increases program selection by pupils to more than one shop in the more common areas. Therefore, duplicate programs must be added. As we move upward and pass enrollments of 1,719, the breadth of programs does not increase in proportion to enrollment increases and the capital outlay per pupil $2,453 - $2,415 - $2,363 and operating costs $474 - $478 - $467 are reduced very little.

Vocational education pupils travel additional time from resident school to joint vocational school. Since they ride to resident schools with other students, this extra transportation must be taken from class time. Class schedules of vocational pupils should not be reduced more than one hour per day. It appears that a vocational school of more than 1,700 pupils reduces costs very little, adds new programs in areas not offered by smaller schools but not in proportion to increased enrollments.

Conclusions

It therefore appears that the minimum enrollment for a vocational school should be approximately 600 pupils and consequently a joint vocational or intermediate district of approximately 15,000 in order to give an acceptable vocational program, and it also appears that little is gained by increasing the enrollment above 1,700, which would have a corresponding joint vocational or intermediate district of approximately 42,000 pupils. However, it should be kept in mind that a joint vocational or intermediate district does not have limiting factors by being larger than 42,000 that it does by being smaller than 15,000 as it can operate two vocational schools.

VT 001 658
A Vocational Home Economics Education Survey.

Tennessee State Dept. of Education, Nashville. Div. of Vocational Education
MF AVAILABLE IN VT-ERIC SET.
Pub Date - Jan66 6p.

*QUESTIONNAIRES; *OCCUPATIONAL HOME ECONOMICS; *OCCUPATIONAL SURVEYS

In order to determine needs for programs in home economics occupational preparation, this form was designed to survey household employers. Questions dealt with the use of hired female help for specific tasks inside and outside the home, willingness to hire a trained female worker if one were available, the age of the female which would be acceptable for various tasks, and the hourly wage that the household employer would be willing to pay for various services. Questions related to titles of these occupations and to the occupations of the wage earner of the family were included. (MS)

VT001 658

ED0 31587

STATE OF TENNESSEE
DEPARTMENT OF EDUCATION
DIVISION OF VOCATIONAL EDUCATION

Dear Friends:

Recently enacted legislation has made it possible for training programs to be arranged for many kinds of occupations. Vocational Home Economics will be able to provide instruction that will qualify individuals to engage in occupations involving knowledge and skills in home economics subject-matter areas. Included are such occupations as those which provide services to families in the home, and similar services to others in group situations. Some occupations for which training guides have already been prepared are *The Homemaker's Assistant, Visiting Homemaker, Family Dinner Service Specialist, Companion To An Elderly Person, Clothing Maintenance Specialist, Supervised Food Service Worker,* and *Child Day-Care Worker.* Others may be developed as needs are discovered.

In order to determine needs for training programs in communities in Tennessee, The Elementary, Secondary and Adult Education Section of the Tennessee Home Economics Association and the Division of Vocational Education of the Tennessee State Department of Education have cooperated in preparing this survey form. Appreciation is expressed to Dr. Mary Ruth Swope, Head of Home Economics, Eastern Illinois University, Charleston, Illinois, for permission to incorporate much of a survey form she had developed into this form.

Your answers and your opinions will be most helpful in determining whether or not training programs for occupations using home economics knowledge and skills should be planned and, if so, for what occupation.

Thank you so much for your time, your thinking, and your cooperation.

1	2	3	4	HELP WITH GUEST MEALS
1	2	3	4	LAUNDRY AND/OR IRONING
1	2	3	4	OTHER: _____

B. TASKS OUTSIDE THE HOME

50 - 75 CENTS AN HOUR	$1.00 AN HOUR	$1.25 AN HOUR	MORE THAN $1.25 AN HOUR	
1	2	3	4	CHILD CARE
1	2	3	4	CARE OF ILL PERSON
1	2	3	4	LAUNDRY AND/OR IRONING
1	2	3	4	OTHER: _____

Would you prefer to secure the services of trained helpers through an employment agency rather than locate them individually?

_____ Yes _____ No _____No preference

In training for occupations which use home economics knowledge and skills, do you think the following titles might be appropriate?

_____Child Care Center Worker
_____Clothing Maintenance Specialist
_____Companion to An Elderly Person
_____Hotel or Motel Housekeeping Aide
_____Dietitian Aide in Hospital
_____Nursery School Assistant
_____Food Service Worker
_____School Lunch Manager
_____Clothing Alterer
_____Homemakers' Assistant

What are the occupations of the chief wage earners in your home?

_____Doctor
_____Lawyer
_____Teacher
_____Secretary
_____Welfare Worker
_____Restaurant Worker
_____Clerk in Store
_____Beautician
_____Truck Driver
_____Factory Worker
_____Government Employee
_____Other Occupations

Industrial Cooperative Training, A Handbook for Industrial Cooperative Teacher Coordinators.

Texas A and M Univ., College Station. Engineering Extension Service
Texas Education Agency, Austin. Vocational Industrial Education Div.
MF AVAILABLE IN VT-ERIC SET.
Pub Date - May65 146p.

*PROGRAM GUIDES; *COOPERATIVE EDUCATION; *REFERENCE MATERIALS; *PROGRAM ADMINISTRATION; *INSTRUCTOR COORDINATORS; TRADE AND INDUSTRIAL EDUCATION; HIGH SCHOOLS

This handbook is a compilation of information and data which the coordinator of industrial cooperative training may need during the school year. The handbook is not intended to replace prescribed procedures for training coordinators, but is intended only as a source reference on matters pertaining to program operation. The chapter titles are: (1) Introduction, (2) The Coordinator, (3) Advisory Committees, (4) Selection of Students, (5) Selection of Occupations, (6) Selection of Training Stations, (7) Placement of Students, (8) Cooperative Training Plans, (9) Classroom Facilities, (10) The Related Subjects Class, (11) Organization of Instructional Material, (12) Coordination, (13) Publicity, and (14) Closing Out the School Year. Each chapter is subdivided into reference topics on specific program activities. The appendix provides the coordinator with supplementary information such as laws affecting cooperative training, information for making program applications, requesting approval of unlisted occupations, and sample letters for hazardous occupations. FOREWORD

Few teaching positions require so wide a variety of teacher qualifications -- both personal and educational -- as that of coordinator of industrial cooperative training. A person holding such a position must be a superior teacher. Because of the special requirements of the job and the intimate association with both school and industry, the coordinator -- perhaps more than any other vocational industrial teacher -- has opportunity to develop into a leader in this field of work. In short, the cooperative training field is a logical source of future leaders in vocational industrial education in Texas.

The contents of this handbook is a compilation of information and data which the coordinator may need frequently during the school year. The handbook does not replace regularly prescribed procedures for training coordinators, but is intended only as a source of reference on matters pertaining to legal requirements, standards, objectives, and procedures for organizing and operating industrial cooperative programs.

The first publication was prepared by the Vocational Industrial staff of the Texas Education Agency. This revised edition was prepared by the Teacher Training staff of the Engineering Extension Service of Texas A&M University in cooperation with the Vocational Industrial staff of the Texas Education Agency. It is hoped this handbook will serve the purpose for which it is intended.

I. INTRODUCTION

Legal Aspects of Cooperative Training

Industrial cooperative training is not a recent adjunct to vocational education. Training of homogeneous groups of students (all employed in the same occupation) on a cooperative basis between various industries and educational institutions has been carried on in this country for approximately sixty years. Provisions for such training were included in the Smith-Hughes Act in 1917.

Such cooperative training of homogeneous groups is limited chiefly to the larger cities, because in smaller cities and towns employment opportunities are so diversified. Similarly, in many instances, trade preparatory training in school shops is not feasible in smaller cities except those in which there are one or two predominant industries.

Consequently, in 1931, the Federal Board for Vocational Education modified its policies on cooperative part-time education, to permit training of groups of young workers employed in a variety of trades and occupations. Cooperative training of this type is an outgrowth of Part-Time General Continuation Training and -- for budgetary purposes, at least -- is still classified as such. However, due to special requirements and standards that have been set up for it, this type of program is generally looked upon as a special phase of part-time education.

Terminology

The type of cooperative training mentioned above has no fewer than a dozen different designations in the various States. Such terms as Cooperative Part-Time Classes, Part-Time Cooperative Classes, Part-Time Training in Diversified Occupations, Diversified Cooperative Classes, Diversified Occupations (or merely "D. O.") are frequently used interchangeably. It is desirable that a standard term which is brief yet descriptive of the program be adopted for use in this State. The Vocation Industrial Division recommends that the term Industrial Cooperative Training Classes be used since it distinguishes this type of program from all other cooperative classes such as those in distributive education and office training.

Objectives of Industrial Cooperative Training

The basic objectives of industrial cooperative training is to prepare boys and girls for useful employment in occupations of their choice in which there are

available openings. Training of this type is designed for smaller communities in which extensive employment opportunities do not exist. However, in the larger cities in the State, cooperative training has proven to be both practical and advisable in preparing youth for full-time employment in many of the less prevalent occupations for which preemployment training in unit shop courses is not justifiable.

Relationship of Vocational Industrial Education to the Total Education Program

Industrial cooperative training courses are not operated by the State Board for Vocational Education. The program belongs to the local community; coordinators and related subjects teachers are employed by local public schools on the same basis as are other teachers under the Foundation School Program. In order to assist the local schools in maintaining these standards, the State Board makes available the services of area vocational supervisors. Teacher trainers employed by teacher-training institutions are also available for assistance to teachers and coordinators.

In order to assist the coordinator of industrial cooperative training in understanding the relationship between his program and the State organization, the following charts are given: The asterick in Figure 1 locates the Vocational Industrial Division. Figure 2 shows the organization of the Industrial Education Division of the Texas Education Agency.

From these organizational charts (Figure 1 and Figure 2), one can see that vocational education supplements but does not substitute for the general education program. The vocational program is designed to contribute to the educational preparation of youth, enabling them to accept the duties of responsible citizenship. An important part of that responsibility is occupational competency in vocations of their choice. Industrial Cooperative Training programs, one phase of Vocational Industrial Education, provide an opportunity for these youths to begin developing skills which will enable them to be an asset to the community and to fulfill their occupational responsibilities.

II. THE COORDINATOR

Duties of the Coordinator

The coordinator of industrial cooperative classes is employed by the local public schools to supervise and correlate the school work and work experiences of part-time students. It is his duty to promote interest in the program, organize his classes, develop and organize instructional material, place students in employment according to their interests and qualifications, and to do follow-up work among employed students. In practically all cases he also supervises the related studies of his students, thus serving in the dual capacity of teacher-coordinator.

In addition to the above duties which are directly related to his program, the coordinator has certain responsibilities to the school in general, such as counseling and disseminating occupational information, and representing the school in conferences with persons in business and industry on matters pertaining to vocational training in general.

List of Activities

Following is a comprehensive list of duties and activities generally associated with the work of a teacher-coordinator. They are not necessarily listed in a sequential order. The teacher-coordinator will, in all probability, carry on several of these activities concurrently:

ACTIVITIES IN ORGANIZING CLASSES

Make occupational surveys

Make school surveys

Assist in organizing advisory committees

Publicize new programs

Interview prospective students

Interview prospective employers

Place students in employment

Register and schedule students in classes

Set up classroom facilities

Set up library

Work out schedules of work experiences with employers

(Activities in Organizing Classes Cont'd)

Select occupations for training

Select training stations

Select students

Make out courses of study

Prepare training plans

Assist students in obtaining social security cards, work permits, student-learner certificates

ACTIVITIES IN TEACHING RELATED SUBJECTS

Assist in making occupational courses

Set up files for instructional material

Make individual student assignments

Supervise study period

Plan group discussions

Lead group discussions

Keep class records

Grade and record written assignments

Give unit tests

Compute and record periodic grade reports as required by local school (6 wks., 9 wks., & semester)

Keep inventories of instructional material

Requisition and order instructional material

Close out semester; school year

ACTIVITIES IN ORGANIZING INSTRUCTIONAL MATERIAL

Make occupational analyses

Adapt analyses to meet local requirements

Outline technical topics paralleling analyses

Evaluate available reference material

Write instructional sheets based on related topics:

Assignment sheets
Information sheets
Experiment sheets
Project sheets
Test sheets

Duplicate above types of instructional sheets

ACTIVITIES IN COORDINATING PROGRAM

Make out weekly time budget

Plan afternoon itineraries (visitation)

Visit training stations

Confer with employers

Secure employer's periodic rating

Confer with advisory committees

Interview prospective students and employers for the next school term

Visit parents of students

Counsel with non-vocational students

Confer with other teachers on students

Publicize activities of class

Secure reference and instructional material

Make out daily coordination records and reports

Keep permanent records of students; keep follow-up records of graduates

EXTRACURRICULAR ACTIVITIES

Sponsor a Vocational Industrial Club Chapter (The Vocational Industrial Club of Texas is a statewide organization for high school students who are enrolled in vocational industrial courses for the purpose of bringing about wholesome attitudes, leadership development and higher trade ethics.)

Confer with management and employee organizations on training needs

Organize extension and part-time adult classes

Supervise extension and part-time classes

Assist in school and civic activities and projects

Participate in professional (teaching) organizations

Teacher-Training Requirements

The coordinator, like all other vocational teachers, must have a valid vocational teachers certificate on file in the office of the Superintendent of Schools where he is employed. The certificate is of two grades: Emergency and Provisional.

A temporary certificate is issued by the State Board for Vocational Education to qualified persons upon receipt of:

1. An application for Texas Vocational Teaching Certificate (IE-5)

2. A contract between the State Board and the local school where the coordinator is employed.

Coordinators will complete three required teacher-training courses and a short orientation course before starting work, or during their first year of teaching. The first three required courses are:

1. Selection, Placement and Follow-up

2. Methods of Teaching

3. Development, Organization and Use of Instructional Material.

A permanent certificate will be issued holders of temporary certificates upon receipt of the usual application after the coordinator has completed three additional teacher-training courses before starting his second year of work:

4. Analysis and Course Making

5. Aims and Objectives of Vocational Education

6. Problems in Cooperative Training.

All the above courses prescribed for coordinators will be taken in regular summer sessions in one of the two designated teacher-training institutions -- the University of Texas and Texas A&M University -- except the orientation course which may be offered on the job or before the coordinator begins his first year's work.

III. ADVISORY COMMITTEES

Since the success of any preemployment training program -- especially one of the cooperative type -- depends upon the close relationship and cooperation between the school and industries of the community, it is obvious that there is a definite need for a committee, composed of representative persons from business and industry, to guide the school in inaugurating and maintaining a program of instructions which will best meet the training needs of the community.

The Texas State Plan for Vocational Education provides for the establishment of such committees in communities operating either cooperative or shop programs. One general committee will suffice for both types of programs in centers where both are operated, but if the fields of training of the two programs differ greatly, separate committees should be set up.

General Advisory Committees

Local advisory committees are of two kinds: (1) the general advisory committee, and (2) occupational or craft committees. The general committee, as the name implies, serves in an advisory capacity to the school on matters of a general nature, not necessarily applicable to each craft or occupation. For cooperative programs, the general committee should perform the following functions:

1. Advise as to general training policies.
2. Advise as to fitness of training stations.
3. Pass upon wage scales.
4. Make recommendations concerning approval of training plans.
5. Make recommendations concerning canceling or transferring training plans when necessary.
6. Assist in conducting industrial education surveys.
7. Assist in promoting and publicizing the program.
8. Assist in evaluating the program.

The contribution which an advisory committee can make to a vocational program is at a maximum when it limits its participation to the above activities.

It should never assume administrative authority nor attempt to operate the program directly.

The general committee should consist of at least six persons: two employers, two employees, a representative of the public, and a representative of the school -- usually the coordinator -- who is without vote. Coordinators are required to furnish the State Office with the names of committee members and the groups they represent. Samples of the manner of listing the general advisory committee members are shown in the illustrated forms, Organization Report and Annual Report, discussed in later sections of this handbook.

Selection of Committeemen

Members of the general advisory committee are appointed by the Superintendent of Schools for one year. They are selected with the assistance of the coordinator from a list of key persons in the community who are qualified to render real service to the schools in an advisory capacity. Some suggestions on the selection of such persons follow:

Employer Groups - Every community has several persons classified as managers, superintendents, or foremen of businesses or industries who are prominent in civic affairs. The selection of committeemen from such a group to represent management is usually an easy task. There are, however, a few factors which the superintendent and coordinator should keep in mind when selecting such persons:

1. Their close relationship to the fields of employment represented.

2. Their reputation in the community.

3. Their participation in civic and school affairs.

4. Their knowledge and interest in educational matters.

These factors do not imply necessarily that the "big shots" of the community are the only qualified persons to serve as committeemen, yet, everything being equal, a person who is highly regarded will be of greater value to the local schools than one who is relatively unknown.

Employee Groups - Committee members from the ranks of employees are frequently difficult to select due to the fact that employees, as a rule, are not so active in civic affairs nor so well known in the community as persons classified as managers. Members selected from employee groups should be leaders in their fields of employment. They represent all the employed persons in

their field and allied fields as well. Various labor groups or organizations in the community should be invited to recommend such leaders as possible committeemen. Factors to be considered in selecting members of the employee group are:

1. Their close relationship to the trades or occupations represented.

2. Their reputation as craftsmen.

3. Their interest in youth and school affairs in general.

Representative of the Public - Insofar as possible, a person who is actually a public agent, or one who, through the nature of his work, is in close contact with the public, should be selected as the so-called "neutral" person on the general advisory committee. Such persons might be connected with the Texas Employment Service, Apprentice Training Service, the press, or any recognized youth organization.

Craft or Occupational Committees

A trade, craft or occupational committee serves in a more specific capacity than the general advisory committee and usually is needed only when several students are being trained in one particular occupation. This group represents its own specific trade or occupation only, and in some instances -- especially in smaller communities -- may consist of no more than two or three members.

In addition to the duties outlined for the general committee, the occupational committee is expected to advise with the coordinator regarding preparation of instructional material and to assist him in setting up standards and policies for training students in their specific occupation. All of the body's activities -- as suggested by its name -- are to apply only to the trade or occupation for which the committee has been chosen. Meetings should be held when necessary.

Both employers and employees should be represented on occupational committees and they should be appointed in official manner by the school superintnedent after consultation with the interested group. No special procedure is required, but it is suggested that committee members be appointed from a list furnished by the group represented.

In certain instances the coordinator may need the advice and assistance of a small group representing a particular occupation for only a short time, as, for example, in reviewing and evaluating instructional material to be used in training in the occupation represented. In such cases, it is suggested that the

coordinator invite the group to meet with him two or three times -- perhaps within a week -- without having them appointed as a permanent committee.

Organization of Committees

Each committee should have a chairman and a secretary selected by the group from its own members. It is suggested that the coordinator act as secretary since he is in a better position to keep records and make reports than anyone else, but in no case should he assume the duties or authority of the committee. Regular meetings of the general advisory committee should be held; called meetings may be held when necessary. Minutes of each meeting should be kept in the coordinator's school files.

It should be remembered that advisory committee members donate their time and effort to aid the school, and the imposition of unnecessary requests for assistance is very unwise. The coordinator should exercise care in preparing plans and agenda for committee meetings, making certain that a meeting is needed and that a definite program is followed. Meetings called merely for the sake of meeting are likely to result in a loss of interest and an eventual loss of the committee. It is imperative, also, that each member of the advisory committee become well acquainted with the aims, objectives, and methods of vocational education in the large sense. This phase of committee work is largely educational, but the success of the cooperative program depends, in a large measure, upon the thoroughness with which it is done.

IV. SELECTION OF STUDENTS

One of the chief factors determining the efficiency of a cooperative training program is the quality of students selected to enter training. "Quality students" does not necessarily mean those in the "Grade A" quartile, but refers to those students who possess the aptitudes and qualifications required for success in a given field of work.

Need for Guidance

A desirable employee can result from the training received under this program only when the student enrolled in it is capable and desirous of receiving training. From the first grade through the twelfth, the general objective of classroom teachers tends to influence boys and girls to plan only to enter college after graduating from high school. This has prevented many excellent students from giving serious consideration to entering skilled occupations. In many schools the general impression is left with the student that any goal of less than college level is an admission of inferiority. Hence, it is necessary to show students that the training necessary for success in a legitimate industrial field requires more than average intelligence, and that the prospects for advancement are as good or better than in many professional fields; since not more than perhaps twenty-five per cent of high school graduates attend college, it is important that careful consideration be given the possibility of entrance into fields in which the greatest opportunities lie. Likewise, the number of positions requiring college graduation, while increasing, is not increasing so fast as is the number of college graduates. This trend forces many college graduates to accept work in fields other than those for which they have been trained. These facts must be given not only to the students but to the teachers. The earnest cooperation of teachers should be solicited in their future work.

The coordinator, more than any other faculty member, has opportunity to disseminate a vast amount of authentic occupational information about his community, both informally and through organized effort. He must have readily available such information as job requirements, employment opportunities, wage schedules, working conditions, training facilities, occupational trends, and the like which may be used in assisting students in making wise and intelligent choices of vocations. The coordinator should by all means have one school period scheduled for counseling and guidance activities.

Eligibility of Students

Students sixteen years of age or older who are of junior or senior classification

are eligible to enter the industrial cooperative program. Applicants may or may not be employed at the time they are admitted to the class. If they are employed and wish to receive further training in their present work, both the occupation and the place of employment -- called the training station -- must meet the standards which have been set up and which are explained in following sections of this handbook.

Students who are employed in the occupation of their choice must be placed in part-time employment by the coordinator. This calls for student selection, based upon the coordinator's knowledge of the occupational requirements of the various fields in which cooperative training is offered.

The coordinator should strive not only to place students according to their interests, but according to their fitness for their chosen work as well. A list of factors which should guide the coordinator in selecting students is given below:

FACTORS IN JUDGING OCCUPATIONAL FITNESS OF APPLICANTS

Interest in receiving training
Physical suitability
Mental suitability
Moral reliability
Social adaptability
Educational background
Disciplinary record
School attendance record
Special interests
Hobbies
Past work experiences
Special personality characteristics
Recommendations
Sex (when a requirement)
Age
Past employers' opinions
Other school activities

In some instances the coordinator may use standard interest and aptitude tests to assist him in judging occupational fitness of applicants. However, he should refrain from accepting as "conclusive" the students' performance on only one or two tests of this type. Interest and aptitude tests have a certain value in guiding students away from certain fields of work for which they are not fitted, but are wholly unreliable in predicting success in any specific field of endeavor.

Another service available to the coordinator which will assist in judging occupational fitness of applicants is your Texas Employment Commission.

The Texas Employment Commission will cooperate with the coordinator by providing GATB (General Aptitude Test Battery) testing and counseling to high school students who desire to enter the various courses of vocational industrial education. The Texas Employment Commission will render testing and counseling in local Texas Employment Commission offices where the GATB is now installed, except in those instances where the District Director decides that an exception is practical and desirable. The coordinator must initiate the desire for this service through the local Texas Employment Commission Director.

Frequently the coordinator will be prevailed upon to place students in training stations which, in his opinion, do not measure up to acceptable standards. He should learn to say "no" after he has analyzed a situation and finds that it does not present desired educational possibilities. Under no condition should he resort to subterfuge in refusing to accept either a student applicant or training station, but should frankly -- yet tactfully - discuss the reasons for his action with the interested parties.

Student Applications

Much of the personal information about applicants can best be secured through personal interviews. Other items of information -- those to which the coordinator may need to refer frequently -- should be contained in the Student Application. The application blank (a suggested copy of which is shown in Figure 3) should be given the student applicant following his first interview with the coordinator.

All applications, signed by the applicant and a parent, should be filed for future reference. When a student has been placed in employment, his application should be placed in the student's personal folder, the contents of which will be discussed later.

Some of the qualifications of applicants, such as attitudes, character, and the like, are difficult to determine through personal interviews and applications. Information of this type can best be obtained through contacts with the students' former teachers, principals, employers, and counselers. Although it is not entirely necessary, a mimeographed form for collecting this information may be used to an advantage. A suggested form is shown in Figure 4.

APPLICATION FOR ADMITTANCE INTO
INDUSTRIAL COOPERATIVE TRAINING CLASSES

YOUR NAME Bill Lawson DATE August 15, 1960 AGE 16

DATE OF BIRTH May 3, 1944 CLASS Jr. HOME ROOM Mrs. Lime

Figure 4

V. SELECTION OF OCCUPATIONS

Guiding Factors

While the industrial cooperative program should be diverse enough to meet the training needs of the community in several fields of employment, the coordinator should not attempt to provide training in such a wide variety of occupations as to make his program unwieldy. Insofar as possible, no more than eight to ten occupations which are prevalent in the community should be selected. In general, those occupations which lend themselves to the apprentice plan of training are preferred.

In order to guide the coordinator in determining what occupations to use for training it is the policy of the Vocational Industrial Division to use the Dictionary of Occupational Titles, Second Edition (1949), as the source of reference to determine titles and definition of occupations.

Occupations printed in capital letters on the approved list of occupations for Industrial Cooperative Training (an up-to-date listing is furnished you by the Vocational Industrial Education Division of the Texas Education Agency and should be referred to frequently by the coordinator) are approvable for training in industrial cooperative programs. Occupational titles listed are those commonly used throughout the nation, and coordinators are requested to use these titles in preparing training plans, organization reports, and other forms.

The five- or six-digit code number immediately following each title identifies the occupational classification into which each occupation falls. In order to define more clearly the training objective of individual students, coordinators are requested to add the code number after the occupational title on each training plan.

The only classification groups of importance in industrial education -- and those into which practically all approvable occupations fall -- are those indicated by the following three-digit code numbers (the first three numbers in a complete six-digit code number):

0-41 to 0-69 - Certain technical and semi-professional occupations.
4-01 to 5-19 - Skilled manufacturing occupations.
5-20 to 5-61 - Skilled non-manufacturing occupations.
5-72 to 5-89 - Skilled miscellaneous occupations.

The proper classification for any given occupation is determined by the training objective of the student-learner--not his status as a learner. For example, during training, a co-op student learning sheet metal work may be considered

a learner, helper, or apprentice (7-97.010). His vocational objective, however, is sheet metal worker (4-80.010) -- a skilled occupation. The latter classification and code number should be used on his training plan.

To be approvable for Industrial Cooperative Training, an occupation must meet all three of the following criteria:

1. The occupation must be a trade and industrial pursuit. Trade and industrial pursuits include occupations in two categories:

   (a) Occupations classified as "skilled" in the Dictionary of Occupational Titles which bear three-digit code numbers 4-01 through 5-89.

   (b) Other technical and semi-professional occupations specified by the U. S. Office of Education as coming within the scope of trade and industrial education, such as nursing (less than college level), laboratory technical work (medical and industrial), drafting, commercial art and designing, and photography.

2. The occupation must require at least 2000 hours of organized training. Such training includes both on-the-job instruction and related technical instruction. The term "2000-hours" is more or less a nominal expression and indicates the approximate number of hours a co-op student spends in training during two school years. A "2000-hour" training period is not meant to include numerous hours spent in repetitive manipulative operations for the purpose of gaining speed of production.

3. The related technical information required must be sufficient to justify the enrollment of students for 350 hours of related instruction. These hours represent the approximate total time devoted to classroom instruction, one hour a day for two school years. A very limited number of occupations (one-year occupations) are exceptions to this two-year requirement and are noted on the approved list.

Following is a list of some of the possible fields of training which are more or less "standard" in this State:

Automobile Body Repairman	5-81.510	Chef	2-26.31
Automobile Mechanic	5-81.010	Commercial Artist	0-44.21
Automobile Parts Man	1-75.22	Dental Technician	0-50.06
Automotive Electrician	5-81.420	Draftsman, Architectural	0-48.05
Baker	4-01.100	Dry Cleaner	5-57.110
Carpenter	5-25.110	Electrical Appliance Serviceman	5-83.041

Electric Motor Repairman	5-83.433	Painter	5-27.010
Electrician	4-97.010	Photographer	0-56.11
Farm Machinery Repairman	3-35.10		0-56.21
Furniture Repairman	4-35.710	Plumber	5-30.210
Machinist	4-75.010	Printer	4-44.010
Machinist, Automobile	4-75.010	Radio Repairman	5-83.411
Medical Technician	0-50.01	Refrigeration Mechanic	5-83.941
Meat Cutter	5-58.100	Sheet Metal Worker	4-80.010
Office Machine Serviceman	5-83.111	Television Repairman	5-83.416
Offset-Pressman	4-48.050	Watchmaker	4-71.510
		Welder (Combination)	4-85.040

In addition to the above fields of work, most communities have other occupations which are suitable for training. In order to guide the coordinator in passing on the acceptability of these occupations, the following list of factors is submitted:

1. Opportunities for employment after training.
2. Stability of the occupation.
3. Opportunities for advancements.
4. Availability of suitable reference material.
5. Time required for training (minimum of 2000 hours).
6. Extent of transfer of training to other occupations.
7. Regularity of employment.
8. Pay (wages).
9. Training facilities.
10. Hazards.

Naturally, the type of occupations in which training is done is influenced to a large extent by the desires of the students as well as the training needs and employment opportunities of the community. Popularity of certain occupations seems to come in "cycles", and it is not uncommon for an abnormally large number of students to apply for training in a "popular" occupation and ignore other occupations with better employment opportunities. Situations like this call for skill in guiding and counseling with student applicants.

In many smaller communities, occupations which are a combination of two or more closely related skilled occupations, are quite common. Some typical examples are:

Printer and pressman
Painter and paperhanger
Sheetmetal and ornamental iron worker
Electric motor and appliance repairman
Bricklayer and tile setter
Machinist and welder

Such occupations present certain difficulties in preparing forms and training plans, particularly in typing long occupational titles and code numbers in short spaces provided.

In designating occupations with dual objectives, coordinators should select and use the predominant occupation if possible. In preparing training plans, the predominant occupation can be used as the training objective of the student, and the dual nature of the training to be provided can be noted on the reverse side under "Schedule of Work Experiences".

NOTE: A combination of two or more unskilled or semi-skilled occupations does not necessarily constitute a "skilled" occupation or an approvable occupation for industrial cooperative training.

When students are placed in unlisted occupations which unquestionably meet all criteria for approval, the occupation will be approved "automatically" with the approval of individual training plans.

In cases where there is an element of doubt as to the eligibility of an occupation, the coordinator should make sure the occupation is approvable before placing a student in it. Since the responsibility for making such a decision is vested in the Division of Vocational Education, it will be well for the Coordinator to secure written approval from the Vocational Industrial Education Office.

In order to facilitate this procedure, a special mimeographed form has been prepared and will be made available to coordinators requesting it. A copy of this form may be found in the appendix.

Particularly Hazardous Occupations

In selecting occupations, it is necessary to comply with certain State and Federal laws regulating labor and the employment of minors. Occupations which have been declared hazardous -- such as those involving the operation of power-driven woodworking machinery, the operation of motor vehicles, and working with certain power-driven hoisting apparatus. A fuller explanation of hazardous occupations is contained in the Digest of Labor Laws found in the Appendix.

On occasions, employers of student-learners in Industrial Cooperative Training programs have failed to comply with certain Hazardous Occupations Orders. In some instances, exemptions are provided for the employment of student-learners, less than 18 years of age, provided certain conditions are met. These conditions for exemptions for student-learners

apply only to Orders No. 5, 8, 10, 12, 14, 16 and 17 and are explained in the Appendix.

In nearly all cases, non-compliance with these Orders is unintentional and coordinators are urged to assist the employer in avoiding future violations in every way possible.

Officials of the Wages and Hours and Public Contracts Division of the U. S. Department of Labor have indicated that a letter similar to the sample in the Appendix would offer protection to the employer and clear the coordinator of any breach of responsibility in instances where compliance with the law might be checked.

Accordingly then, we are recommending use of the same or similar letter, page 142, to employers engaging in interstate commerce who employ students under 18 years of age in any of the seven hazardous occupations mentioned above. It must be remembered that in addition to the letter, a valid Training Plan for each student must also be in the files of the employer.

Prohibited Occupations

The coordinator should avoid selecting occupations for which the State has set up entrance and certification requirements -- such as high school graduation -- which makes it difficult for high school students to earn credit for part-time experience gained prior to graduation. Embalming, beauty shop operation, barbering, and manicuring are examples of this type of occupation.

VI. SELECTION OF TRAINING STATIONS

Factors to Consider

The training station is the store or shop where the student receives his practical work experiences. The employer is the person associated with the training station who hires the student, approves his training plan, and supervises his on-the-job training. Frequently, supervision of the student's work is delegated by the employer to a subordinate, such as a foreman or experienced employee. Such a person is usually referred to as a training sponsor and is the one with whom the coordinator confers in correlating the student's related studies and work experiences.

The chief factor in selecting a particular training station in any particular occupation is the attitude of the employer and his employees toward the cooperative training plan and their willingness to provide well-rounded work experiences. The employer must understand that the student-learner is to be transferred from one job process to another upon reaching the proficiency level required for satisfactory performance in the occupation. The purpose of this rotation is to provide well rounded training for the student-learner. The responsibility of the employer goes much farther than merely providing the student-learner with a job. In addition to the above, there are several other factors which should influence the coordinator in placing students in a particular training station.

1. Respectability and responsibility of the employer.
2. Training equipment available.
3. Competent employees.
4. Volume of business.
5. Variety of work available for training.
6. Wages to be paid student-learner.
7. Company policies toward student-learner.
8. Standards of workmanship to be met.
9. Degree of specialization required.
10. Employer-employee relationships existing.

Undesirable Stations

It is not necessarily true that because a shop is a large one doing a large amount of work, it is the most desirable training station. If the employees work on a piece-rate basis, and no special training facilities are set up, the beginning employee may receive very little training. It may be a case of the student-learner having to "steal" his trade knowledge. Usually if

employees work on a piece-rate basis, their attitudes toward training beginners is not the best. Each training station should be studied thoroughly before placement is made. All prospective places of employment must meet with the approval of the general advisory committee.

Training stations located remote from the community, and those located in unsavory or disreputable sections should be avoided. The State prohibits the employment of minors in places of business located in the same building with, or adjacent to, a brothel or place where alcoholic beverages are sold.

SUPERVISED STUDY

VII. PLACEMENT OF STUDENTS

Placement involves two things: the selection of a particular student by the employer, and the working out of the conditions and plan under which the student is to receive training. These conditions and plan, worked out by the coordinator and employer, are incorporated in the Cooperative Training Plan which will be explained later.

Standards of Student Placement

In working out a plan of training, the coordinator must have clearly in mind the standards which have been set up in this State on the employment of industrial cooperative students. Standards pertaining to several conditions of employment are given below:

Hours - The time a student-learner spends in employment shall not be fewer than 20 nor more than 25 hours per school week. Employment on Saturdays and holidays is optional with the student and employer and is considered "work" instead of supervised training.

Wages - Student-learners shall receive a fair wage for useful work done while undergoing training. The monetary wage rate for beginning student-learners should be comparable to that paid other beginning employees in the same occupation in the community.

There is no maximum wage set for student-learners, but employers should be cautioned against setting the wages of one student inordinately higher than those received by the average member of the class. Aside from creating a certain amount of dissatisfaction on the part of other students, excessively high wages may cause the employer to feel that he must receive the maximum amount of production work from the student and thus hinder the student from being progressed to newer types of work experiences throughout his training period.

Wage Adjustments - Any student-learner who is making satisfactory progress on the job is entitled to a raise in wages at specified intervals. Since it is unlikely that the employer and coordinator can anticipate economic conditions a year or two in advance, the amount of salary raise must be left to the integrity of the employer rather than stipulated in the training plan.

Length of Training - The length of the training period must be two school years, with certain exceptions which the local advisory committee may deem it advisable to make in the cases of a limited number of senior students who possess above-average qualifications.

Probationary Period - Probationary periods -- usually of 30 days duration -- are recommended as protection to both the student and employer. Probationary periods shall not be longer than 60 days.

Placement Activities

Instructions to Students - Before the formal opening of school or during registration week, there are several methods of providing worthwhile instruction to students who have been accepted as being mentally and physically fit to enter the program. One good method is to call the students together for daily one-hour class sessions in which they study and discuss such topics as occupational opportunities, job classifications, employer-employee relationships, local school policies, and methods of approach in applying for a job. Most high school students know very little of the industrial world. These studies are intended to prepare them for entrance into a new environment.

Application Forms - Practically all firms of any size make use of formal employment applications. These, in many instances, are perplexing, even to an adult. Students who are to be placed in employment should be given preliminary instructions in filling out such forms correctly. They should have readily available such personal data as are usually called for in employment applications: social security number, color of hair and eyes, height, weight, educational background, previous positions held (with dates), mother's maiden name, and the like. To anticipate the majority of questions to be answered facilitates answering the questions with a minimum of delay and errors. If possible, practice in filling out application blanks should be afforded students. The coordinator should instruct the student on approved job application procedures.

Introduction of Students - Coordinators are frequently confronted with the question of whether to send the student to interview an employer or to go with the student and introduce him to the employer. There are advantages and disadvantages to both procedures, and the coordinator should decide, from his knowledge of the student, which procedure to use in each case.

Employer's Selection of a Student - Employers who desire to train part-time students are permitted to select from the applications those students whom they wish to interview; they should set the time and date for each interview, and the coordinator should then notify each student when to see his prospective employer. The coordinator should assist the employer in his selection by furnishing all available information about each student but should refrain from giving his personal recommendations or arbitrarily assigning a student to work in a certain training station. It is the employer who should pick the student for the job, not the coordinator. The reason is obvious.

VIII. TRAINING PLANS

One of the chief virtues of cooperative training is the fact that the training -- both practical and theoretical -- is centered around an organized plan. The plan for training each student must be worked out by the coordinator and employer before the student begins work or immediately after placement. It must be approved by the local advisory committee and the Director of Trade and Industrial Education before the student is considered a bona fide trade and industrial student. Training plans are executed in triplicate and sent to the Area Supervisor who reviews and forwards them to the State Office where the original plan is filed. The second and third are returned to the coordinator who places one with the employer for his reference in carrying out a well rounded training program and the other copy is placed in the student's file.

Explanation of Training Plans

The Cooperative Training Plan (Form VIE-010) is designed to fill a three-fold purpose: (1) to serve as a guide to the coordinator and employer in providing the student-learner with both practical work experiences and technical information related to his occupation; (2) to provide a record of the student's progress on the job; and (3) to provide a record of his related studies. A sample of this form is shown in Figure 5, and an explanation of the reverse side is given below and in Figure 6:

Schedule of Work Experiences -- The coordinator, with the assistance of the employer, lists all the various types of jobs or work experiences in which the student-learner may be reasonably expected to engage during his training period. Although it is practically impossible to plan a definite sequence of work experiences months in advance and adhere strictly to the schedule, it is nonetheless imperative that some sort of logical and systematic method of listing the work experiences in the training plan be followed. The three most satisfactory methods of listing work experiences are explained below:

1. Jobs or work experiences may be listed in order of difficulty, from the easiest to the most difficult. Some occupations have a sort of traditional progression order for learners, but in others it is difficult to follow this system. Auto body repairing, meat cutting, and electric motor repairing are examples of occupations in which the jobs may be listed fairly well in order of difficulty.

2. Jobs in occupations having several distinct and more or less independent units of work are listed, as a general rule, according to the type of work done or the machines and tools used. Examples of occupations of this type are printing, auto mechanics, and machine tool work.

3. Jobs for certain occupations can be listed more conveniently according to a "production" order, that is, according to a more or less definite sequence of processes or operations customarily followed in the production of a commodity. Examples: sheet metal work (from laying out to final assembly), and carpentry (from foundation to inside trim work).

Course of Study -- The course of study is to be made out by the coordinator -- with possible suggestions from the employer -- and should consist of topics or subjects of information related to and paralleling the work experiences listed in the first column. In general, the informational topics listed concern tools, equipment, and materials of the occupation; related mathematics, science, and drawing; and operating principles and processes related to the occupation.

Record of Work -- This column takes the place of a separate form for recording the job progress of the student-learner and is to be used by the coordinator for recording the type and frequency of the work experiences of the student in any manner which he chooses. The system of recording job progress illustrated on the reverse side of Figure 5 is one frequently used by trade and industrial teachers and is explained as follows:

Each time a student lists on his daily Student's Job Report a particular type of work which he performed with assistance or under close supervision, the coordinator marks one side of a square in the column opposite the proper job or work experience in the first column. He continues to complete the square or squares from time to time as the same job appears on the student's daily report. When the student is able to do the job by himself and without close supervision, the coordinator marks X as illustrated. Subsequent jobs of the same type may be indicated by ✔ or in any other manner preferred by the coordinator. Jobs which, in the opinion of the employer, have been mastered by the student may be indicated in some suitable manner, such as "OK".

By keeping this record of job progress accurate and up to date, the coordinator or any other interested person will be able to determine at a glance what jobs listed in the training plan the student has gained experience in, how many times he has been assigned a particular job, which jobs he has mastered at any point in his training, and the jobs in which he has yet to receive instruction. The coordinator can also determine from this record which topics of related instruction the student needs to study in his related subjects class.

Record of Studies -- In this column, the coordinator or related -subjects teacher is to indicate in any manner he sees fit the student's performance on any type of assignment or test related to a topic or subject of information included in the course of study. For example, in the illustration, the letters A, B, C indicate grades. From this record the coordinator is able to determine how closely the work experiences and related studies of the student are correlated and where additional lesson assignments should be made.

Cooperative Training Plan

This training plan is to (1) define clearly the conditions and schedule of training whereby student Bill Lawson is to receive training as a (an) _____ Refrigeration Mechanic 5-83.941 and (2) serve as a guide to the cooperating parties: the Delta Electric Service Company (Company) and the New Austin Public Schools, in providing the student with opportunities for training in the basic skills of the occupation and the technical information related to it. In order that a systematic plan which provides for well-rounded training can be followed, a schedule of work experiences and a course of study paralleling it have been worked out and agreed upon by the employer and representative of the school. They are listed on the reverse side of this page.

The student agrees to perform diligently the work experiences assigned by the employer according to the same company policies and regulations as apply to regular employees. The student also agrees to pursue faithfully the prescribed course of study and to take advantage of every opportunity to improve his efficiency, knowledge, and personal traits so that he may enter his chosen occupation as a desirable employee at the termination of the training period.

In addition to providing practical instruction, the employer agrees to pay the student for the useful work done while undergoing training according to the following plan:

1. The beginning wage will be $ .50 per hour for 20 hours per school week, which amount is approximately 33 per cent of that paid competent full-time employees in the same occupation in the community.

2. A review of the wages paid the student will be made jointly by the employer and coordinator at least once each semester for the purpose of determining a fair and equitable wage adjustment consistent with the student's increased ability and prevailing economic conditions.

The training period begins the 4th day of September, 1964 and extends through May, 1966. There will be a probationary period of 30 days during which the interested parties may determine if the student has made a wise choice of an occupation, and if the training should be continued.

This plan has been reviewed and recommended by the Local Advisory Committee. It may be terminated for just cause by either party.

Approvals:

Bill Lawson (Student)

J B White, Mgr. (Employer or Representative) Delta Electric Service Company

Mrs. J. J. Lawson (Parent or Guardian)

J. H. Green (Teacher-Coordinator)

John West (Chairman, Local Advisory Committee)

Figure 6.

SCHEDULE OF WORK EXPERIENCES	RECORD OF WORK	COURSE OF STUDY	RECORD OF STUDIES
SUGGESTED TERMINOLOGY			
Work experiences in this column are "doing" activities which the student is expected to learn in a two-year period. Each job or operation (not names of "units") should be in the "verb form" and should be worded so as to complete the following: "The student will learn to---"		This column should contain technical subjects or topics directly related to the work experiences listed on the left. Each subject or topic should be worded so as to complete the following: "The student will study---"	
SUGGESTED FORM			
Name of unit (if used) Jobs or operations to be learned Additional lines		Name of unit or subdivision Technical subject or topic Additional lines	
THINGS TO AVOID			
1. Words and phrases with no clear relationship to work experiences or studies			
Hand tools Carburetors Lathe work Drilling		Mathematics Engine lathes Transformers Electricity	
2. Items not actually (or not stated as) work experiences or instructional topics			
Customer relations Shop safety Employer-employee relations Observe good trade practices and procedures		How to chuck work in a lathe Drilling cast iron Use of hand tools Learn about company organization, policies and operation	
3. Poorly worded items (better wording in parentheses):			
Experience in learning to operate vacuum tube tester (Test vacuum tubes) Assist employer and mechanics in keeping shop and tools neat and orderly (Care for shop, equipment and tools) Do battery testing work (Test batteries)		Study of the methods and procedures for aligning IF transformers (Principles of IF transformer alignment) How to recognize and classify different kinds of woods (types and characteristics of wood materials)	
4. Broad areas which are essentially a trade themselves:			
Overhaul engines (for automobile mechanics)		Procedures and theory for testing and repairing radio receivers	

IE-12-53-100

IX. CLASSROOM FACILITIES

Minimum Requirements

The local school is expected to furnish adequate facilities for conducting the related studies of cooperative students. The classroom should contain study tables and chairs, bookcases, chalkboard, bulletin boards, filing cabinets, and a desk for the teacher-coordinator. An adequate supply of instructional material, consisting of reference books, manuals, bulletins, charts, course material, and the like, for each occupation in which training is offered must be furnished by the school. The floor plan of a classroom of average size and containing minimum equipment is shown in Figure 7. The equipment for such a classroom should include:

Tables and chairs to accomodate class members.

One four-drawer letter-size file cabinet.

One cabinet for students' notebooks and completed assignments.

One book case (with lock) for reference books.

One teacher's desk.

One typewriter.

One large chalkboard.

Cork bulletin board (as large as is consistent with available wall space).

One drawing table and stool.

One special case for pamphlets and magazines. (See Figure 9).

Additional Facilities

If adequate floor space is available, glass display cases or cabinets for keeping students' class projects will add materially to the atmosphere of the classroom and the effectiveness of instruction. Experimentation plays an important part in teaching many of the technical aspects of a trade or occupation, and coordinators are urged to include simple experiments in their related instruction whenever possible to do so. It is suggested that a small enclosed area be provided for such activities. Such a booth should contain at least 80 square

Figure 7. Typical related subjects classroom layout.

Figure 8. Ideal related subjects classroom layout.

feet and should be provided with water and electrical service outlets. A floor plan of a large related subjects classroom with an experimentation booth is shown in Figure 8.

Maintenance

It must be remembered that the effectiveness of the program is dependent upon class organization and the opportunity a student has to study instructional material related to his occupation. Because of this fact, the local school should set aside an adequate fund each year for the purchase of supplies and study material.

This fund will have to be larger the first year than for succeeding ones. It is estimated that ten dollars per student the first year and five dollars per student each succeeding year will be sufficient. The budget must be set to conform to a plan that will maintain the program in accordance with standards set by the State Board for Vocational Education.

Classroom Library

The library of an industrial cooperative classroom consists of trade books, shop manuals, trade literature, manufacturers' literature, and all other printed matter which may be used by the students in pursuing the course of study set up for them. Such material should be grouped according to the various occupations of subjects of technical information.

In addition to this material related specifically to trades or occupations, the library should contain several books on such subjects as economics, basic science, human relations, safety, and the like, which may be used as references for class discussions on topics of common interest and importance to all the class members. All books should be kept in a case which can be locked when the class is not in session. Magazines, pamphlets, and trade journals should be grouped according to subject matter and may be kept in any manner suited to the equipment of the room.

Every coordinator should have his own "professional" library consisting of books and bulletins on vocational education. A suggested list of professional books is contained in the Appendix.

Classroom and Office Files

It is recommended that the coordinator have at least four file drawers available

for his use; suggested contents of each drawer are given below. The manner in which a coordinator collects and files materials which are useful in operating his program reflects, to a great extent, his efficiency as a coordinator.

FIRST DRAWER

Section 1. Individual Student Folders (active)

Section 2. Individual Student Folders (inactive)

Each student's individual folders should contain, among personal data, the following:

1. Application for Admittance into Industrial Cooperative Program
2. Permanent Record Card (VIE-011)
3. Cooperative Training Plan
4. Employer's Periodic Ratings
5. Student's Daily Job Reports

SECOND DRAWER

The second file drawer should contain material used by the coordinator himself, and should have file guides bearing the following suggested headings:

Advisory Committee, Annual Reports, Bibliographies, Bulletins (Memos), Catalogs, Closing Reports, Coordination Reports, Correspondence, Extension Classes, Forms (State and Local), Group Discussions, Handbooks and Manuals, Instructional Material Lists, Inventories, Labor Laws, News Letters, Organization Reports, Prospective Lists (Student; Employers), Publicity, State Plan (Sec. VI), Surveys, Teacher Training Data, Visual Education, Vocational Industrial Clubs.

THIRD DRAWER

The third file drawer should contain folders for the various courses of study used in the related subjects classes. Daily assignments are selected from these folders and distributed to the students at the discretion of the coordinator. Assignment sheets completed by the students should be returned to the proper place each day so as to prevent the files from becoming confused. Courses not being used at the time should be segregated in a back section of the drawer.

FOURTH DRAWER

The fourth file drawer is reserved for miscellaneous items not previously mentioned which may be used from time to time during the school year.

Figure 9. An inexpensive and convenient case for housing small pamphlets and trade literature.

X. RELATED SUBJECTS CLASS

Objectives

The objectives of related subjects classes for industrial cooperative programs are: (1) to provide technical instruction directly related to the daily work experiences of students; (2) to provide a background of technical and auxiliary information that will enable the student-learner to advance beyond mediocrity in his chosen work; (3) to create desirable attitudes on the part of the student toward work, school, and society; and (4) to develop latent leadership abilities of the student.

Problems

Providing related instruction that will attain the above objectives is no easy task. Because of the diversity of occupations included in the program and the difficulty of locating a teacher-coordinator with experience in all these fields of work, related instruction is consequently a phase of cooperative training which requires regular, detailed attention and constant efforts to improve it.

Previous high school teaching experience is desirable and, in fact, a requirement for teacher-coordinators; yet this alone does not necessarily qualify a person as an efficient related subjects teacher. The efficient teacher-coordinator must possess an insatiable curiosity about all industrial procedures and practices coming within the scope of his training program. He should make conscious effort to acquaint himself with the basic technical information surrounding the occupations of his students, particularly those in which he has had little or no practical experience. To provide the mere physical requirements of a class -- reference material, courses of study and the like -- is not enough; without the ability to assist students by interpreting related material and correlating it with accepted industrial practices, the teacher-coordinator has little justification for his being employed in any other capacity than study hall keeper.

Class Schedules

The Texas State Plan for Vocational Education specifies one period of related instruction each school day for industrial cooperative students in schools having 60 minute class periods. In schools using 45 minute class periods, each student will attend class two consecutive periods each day.

Students under the supervision of one full-time teacher-coordinator are to be grouped as first- and second-year students, each group or class meeting at

different periods. No definite order or period is specified for these two classes, but it is suggested that they be scheduled consecutively. Following is a sample half-day schedule for a teacher-coordinator:

Period	Hour	Class
1.	9 - 10	First year group
2.	10 - 11	Second year group
3.	11 - 12	Conference

Students' Job Reports

Each morning, after the usual preliminaries of opening the class, students should be required to fill out their daily job report form, shown in Figure 10. This report summarizes the major jobs or activities performed by the student during the preceding afternoon. When the student has completed one sheet (covering a week's work) it should be placed in his individual folder. Data from these reports are used in making out the semester's Closing Report, and for making entries on the student's permanent record each six weeks. They are also used in guiding the coordinator in making daily lesson assignments which are discussed below. The coordinator should make frequent -- if not daily -- references to each student's work report in order to obtain information that will assist him in making daily lesson assignments. The accumulated job reports of the student should be kept for the duration of his training period.

Student Lesson Assignments

Assuming that adequate reference material and courses of study are available for use in the various occupations, the teacher-coordinator is confronted with the problem of selecting a suitable lesson assignment for each student. This is no easy task, since there are several factors which enter into the judicious choice of a topic of related instruction.

First, the assignment should be directly related to the student's daily work on the job. In many occupations, especially those of the service type, it is difficult to foretell the types of jobs or work experiences in which the student will engage for a week or even a day. It is quite common for a student to engage in two or three different jobs during one afternoon. Close correlation between work experiences and related studies, in such cases, is practically impossible. The coordinator must see that the student's assignments are related to the general type of work the student is doing and the most frequent types of jobs he performs over a period of time. The coordinator has two basic methods of securing this information: through plant visitation and from the student's daily job report.

STUDENT'S JOB REPORT

Student: Bill Lawson Training Station: Delta Elect. Serv-

Week Beginning: March 22 Occupation: Refrigeration serv.

Daily Work Activities To be filled out each class period following an afternoon's work.	Helped on job	Did job by self
Monday Replaced two belts (service calls)		✓✓
Removed unit from Frigedaire		✓
Took down motor for new bearings		✓
Replaced motor bushings Hours worked: 5	✓	
Tuesday		
Helped install walk-in box at		
White's Cafe -	✓	
Hours worked: 4 1/2		
Wednesday		
Cleaned two used cabinets		✓
Replaced door gaskets		✓
Hours worked: 4		
Thursday Tore down compressor -	✓	
Washed + cleaned parts -		✓
Installed new rings, seals,	✓	
and valves. Hours worked: 4 1/2	✓	
Friday Went on service calls with		
boss. Pumped down + recharged		
two compressors	✓✓	
Hours worked: 4		

Wages received this week: $ 12.10 Hours worked this week: 22

Figure 10.

The second fact to be considered in making daily lesson assignments is the individuality of the student. The majority of individuals are able to secure information from the printed page by answering questions and problems and doing research. Some, however, are more effectively reached through other methods of instruction. The teacher-coordinator should attempt to learn the peculiarities and characteristics of each of his students and choose the most effective methods of instruction at his command.

Another factor in making lesson assignments is that of interest. Without a doubt, it is extremely monotonous and even boring to the student to follow the same routine and work on the same type of assignment every day. Written assignment sheets will be used in a majority of cases, but the coordinator should try to make the student's classroom work more varied and interesting through occasional use of such teaching aids as audio-visual devices, experiments, project building, and the like.

Supervised Study

The supervised study plan, such as used in industrial cooperative classes, is the only practical method of providing related instruction to a heterogeneous group. In a sense, it is a modification of the familiar correspondence study plan in which each student works individually on a correspondence course prepared by publishers of trade and technical textbooks. The supervised study plan has several distinct advantages which make it superior to the correspondence study plans in providing technical instruction specifically related to a given trade or occupation.

ADVANTAGES OF THE SUPERVISED STUDY PLAN OVER THE CORRESPONDENCE STUDY PLAN

1. Utilizes flexible courses of study which permits a choice of lessons more closely related to the daily work experiences of the student-learner.

2. Provides courses of study built or adapted to fit local procedures and practices.

3. Provides a teacher-coordinator with sufficient understanding of trade practices to assist the student on problems too difficult for him to solve alone.

4. Provides additional media of learning, such as audio-visual devices, experimentation, and project building.

5. Permits immediate checking and grading of students' written work.

6. Presents more opportunity for student motivation.

In supervising the study of his several class members, the teacher-coordinator has several duties to perform. Merely opening and closing the class and maintaining order are not sufficient. Duties of the teacher-coordinator in supervising related studies include these:

1. To assign (or assist students in selecting) an appropriate daily lesson.

2. To assist students in interpreting the questions and problems.

3. To offer suggestions as to sources of information.

4. To give illustrations, demonstrations, analogies, and applications of difficult technical topics.

5. To assist the students in various phases of writing and problem solving: technical terms, punctuation, spelling, mathematics.

6. To offer encouragement and to inculcate on his students an appreciation of thoroughness, accuracy, and neatness in their related studies.

In order to discharge these duties properly the teacher-coordinator must constantly circulate among his class members. He cannot supervise while sitting at his desk or engaging in some other type of activity. The fact that he makes himself readily available encourages students to consult him on matters pertaining to their studies which they would ignore if the teacher-coordinator appeared to be preoccupied. Some students will request assistance infrequently, while others will ask for aid too often; for this reason, the teacher-coordinator must take care to avoid devoting too much of his time to a few students and neglecting those who seldom ask for assistance.

Group Discussion

A vital part of the cooperative students' time in the related subjects class is devoted to group discussions of topics of interest and importance to the entire group. Subjects bearing on employer-employee relations, job ethics, personality development, economics, safety, and the like, are sufficiently important to merit a sizable portion of the weekly time allotment. Planned discussions in which students take the lead (under guidance of the teacher-coordinator) should be conducted for ten to fifteen minutes each class period or for one entire period each week. Classroom activities of this type, in addition to the

information they put over, are conducive to the development of leadership among the class members. Suggestions on the techniques of planning and leading classroom discussions are contained in a separate State publication, A Manual for Group Discussion Leaders.

Grading Students' Work

Since the inception of cooperative training in diversified class groups, one of the most trying problems confronting the teacher-coordinator has been that of checking or grading the students' written work promptly and accurately. Some teacher-coordinators in the past have maintained that it could not be done; some contended that "spot" checks would suffice, while others made conscientious though inadequate efforts to check each daily assignment thoroughly in the two or three hours per week which they had budgeted for the purpose.

There are numerous reasons why failure of the teacher-coordinator to check or grade every page of written work thoroughly will destroy the effectiveness of his related instruction. Students soon become aware of this practice and consequently become less inclined to do their best work in the classroom. Such a practice may even engender lackadaisical work habits that carry over into the students' job performance. Conversely, nothing tends to motivate the student to do his best and take pride in his work more than the knowledge that his work will be checked promptly and accurately, criticized, and the good points complimented by his teacher.

If adequate attention is to be given the matter of checking and grading, two steps are necessary: (1) sufficient time must be budgeted for the purpose, and (2) more extensive use must be made of answer sheets or keys for scoring answers. A suggested weekly schedule (for teacher coordinators) providing sufficient time for grading work is given in Figure 12. The use of answer sheets and objective tests is discussed in the section on Organization of Instructional Material.

Organization Report

The first State Office report on industrial cooperative classes made by the coordinator after his classes have been organized is the Organization Report (IE-14 Co-op). (Shown in Figure 11) It is due not later than two weeks after the opening date of the class in September and again after the opening of the second semester in January or February. A separate form should be executed for each section or class.

Data on this report are required by the State Office in making out an annual

report to the U. S. Office of Education and in computing training costs. Extreme care should be taken to see that the names of the students, the spelling of their names, the occupational titles, and the names of the places of employment are given accurately. Frequently students are known by both their given names and nicknames. It is suggested that the coordinators use the name of the student which is used in the school records. Needless to say this name should be used consistently on all subsequent records and reports. Refer to Figure 11 for sample Organization Report.

Information Desired on Organization Report

Line--City and School: Reports for town operating only one high school should present no problem here; in cities operating more than one school, it is necessary that both the city and exact school be named.

Line--Time of Day Related Class Meets: This is self-explanatory, but it is essential that it be reported accurately.

Line--Starting Date of Class: This date is necessary not only for making reports for auditing, but also for keying organization reports to contracts, and should be accurate. Classes reported at the beginning of the second semester should show the same starting date (in September) as given on the previous semester's reports if they are a continuation of the semester's class, which is true in nearly all cases.

"Planned Closing Date": This cannot always be exact on the organization report but should be given as nearly correct as possible, and should agree with dates on the contract. The same closing date (usually about the last week of May) should be given on both semester reports.

Lines--Length of Course in Weeks: and Total Starting Enrollment: Practically all school years are of 36 weeks duration.

Line--Name of Teacher-Coordinator: This is obvious. If the program is sufficiently large to justify separate related subjects teachers, the coordinator's name will appear on the same line with the teacher's name.

Line--Semester: Check only; either First or Second.

Lines--Name of Student, Grade, Age, Employer, Occupation: The listing of students by name is for statistical purposes. The listing of grade, age, occupation, and employer is for auditing purposes. The State Board has to make certain guarantees to the United States Office of Education regarding the age, sex, and training status of each student, and this information in turn has to be based on that supplied by operating schools. The names of students listed in this table should be alphabetized and, if so arranged, will

Jones, Jack R.	Secretary	Chamber of Commerce

This form must be filled out completely and mailed in triplicate to your Area Supervisor, immediately after each class is organized. Forms are in triplicate; send all three to your Area Supervisor. One copy (pink) will be returned for local school files.

What fee, if any us charged members of this class per month none, or per year none?

Approved: Homer K. Brown
~~Local Director~~ or Superintendent

Date September 15, 19 64

Director, Industrial Education

TEA-463-1M-1583-B167

Figure 11.

be of material assistance to the State Board for Vocational Education. To distinguish between male and female students, list the boys in one group and follow with the names of girls in the class. Enrollment data by sex is necessary on our annual report.

Students attending class who are unemployed or temporarily unemployed are not considered legitimate trade and industrial students and should not be included in this report unless employment is reasonably certain. In this case, the columns "Employer" and "Occupation" should be left blank so that the proper entry can be made later after the student is placed.

Designations of Occupations (column four) should be consistent. The occupational title should end in a suffix or word which denotes one who, for example, ___er, ___or, ___ist, ___an, ___ic, ___man, ___worker. Indicate students who are "second year" and in the same occupation with an asterisk to the left of his or her name.

Line--Advisory Committee: List committee members, being sure to have equal representation of the employers and employees. Keep in mind that committee members represent a group and not the place of employment or individuals. Owners, managers, superintendents, and foremen are generally regarded as being representatives of the employer group. The individual representing the public (the so-called "neutral" member) should be indicated by the word "Public" in the column headed "Organization or Business Represented".

Line--Fees: If no fee is charged students in a class, which is usually the case, two zeros will completely answer this question.

Study of Directly Related Technical Information

XI. ORGANIZATION OF INSTRUCTIONAL MATERIAL

Type of Material Required

In teaching a heterogeneous group, such as industrial cooperative classes, it is impossible to teach the technical information surrounding several different occupations in the traditional manner of group instruction. The only feasible plan of instruction for such a group is the supervised study plan, previously explained, in which each student works on his individual course of study independent of the group.

Supervised study necessitates daily study assignments. It is the sole responsibility of the teacher-coordinator to see that each student in his related subjects classes has a definite study assignment each day. Assignment sheets in several of the most prevalent occupations have been written, printed, and made available for use. However, course material of this type requires constant revision and supplementing by coordinators in order to keep it up-to-date. When a student is placed in an occupation for which material is not already available, assignments must be written without delay, and in order that the coordinator may produce the best material possible, he must have a thorough knowledge of the techniques and standards which are recommended for the production of instructional material.

Courses of Study

In this discussion, the term course of study implies a series of instructional sheets, grouped according to Units of Instruction and covering all the topics of related instruction which are listed in an analysis of the various jobs or work experiences selected for training. In general, a course of study to be used in industrial cooperative training should contain the following essentials:

1. Title of Course

2. For Whom Intended

3. Objectives of Course

4. Typical Work Experiences (A list of trainable jobs in the occupation, grouped according to Units of similar types of work.)

5. Course Outline (A list of technical topics related to and paralleling the jobs listed under work experiences.)

6. Study assignments, of all types, designed to assist the student in acquiring the technical knowledge contained in the topics listed in the course outline.

7. Unit tests based on the over-all content of the instructional Unit.

8. A bibliography of references used in the study assignments.

Standards for Writing Instructional Material

There is such a wide diversity in formats, content, and terminology used in the production of all types of instructional material in this State that a considerable amount of standardization is imperative. Admittedly, there are several different popular formats and styles which are equally good, and the reasons for selecting a particular standard are not important. The important thing is that the instructional sheets produced in this State be uniform so as to minimize confusion on the part of students who use material produced by different teacher-coordinators. Accordingly, the Trade and Industrial Division adopted the following standards which pertain to the format, content, and quality of all forms of instructional sheets produced for use with industrial cooperative classes:

Types of Assignments - The term "assignment" is taken to mean any type of study or activity which the student is instructed or assigned to do. The term "assignment sheet" is taken to mean a formal sheet to be used by the student in doing research, solving problems, answering questions, making drawings, and the like, concerning the technical information related to his occupation.

"Assignments" may be of several types, chief of which are:

Assignment sheets	Written reports
Experiment sheets	Oral reports
Projects	Test sheets

Each of the different types of assignments will be discussed, along with the standards which have been set up for preparing them.

ASSIGNMENT SHEETS

Assignment sheets will contain the following subdivisions:

Subject: The subject of an assignment should be the name of a

topic of information. It is impractical (if not impossible) to teach the "cooperative" student how to do most of his jobs or operations in the classroom. This is learned on the job. The student can, however, be taught factual information about tools and equipment, materials, science, mathematics, processes, principles, and the like, related to his job that will enable him to learn and understand his "doing" jobs much more quickly. For this reason, the subject of an assignment sheet should, if possible, be a noun or noun phrase rather than a verb, participial phrase, or question. For example:

POOR	BETTER
How to Solder	Principles of Soldering
Filing Metals	Information on Care and Use of Files
How Should a Radiator be Cleaned?	Methods of Cleaning Radiators

References: By references is meant all the printed matter that is to be used by the student in completing an assignment, such as text books, trade literature, charts, information sheets, and the like.

References listed in assignment sheets should show the exact name of the publication, author, and page number.

In choosing and listing references, the person preparing assignment sheets should try to avoid the following bad practices:

a. Abbreviating the name of the references.
b. Using references out of print.
c. Using old editions.
d. Listing articles in back issues of magazines.
e. Listing too many references.
f. Listing only the author, such as "Kuns" or "Dykes".

Explanation: The explanation of an assignment gives the writer of the assignment sheet an opportunity to explain anything about

the subject that he deems advisable. For example, he may explain the following:

a. The object of the assignment sheet -- why it was written or selected.

b. How the assignment ties in to previous assignments.

c. How it ties up with the students' work on the job.

d. Any information not adequately or clearly treated by the reference material.

e. New information about the subject.

f. Local practices or exceptions to the information given in the references.

g. Anything which might be in the nature of Step 1 of a formal lesson.

Directions: The directions are for the student and are intended to assist him in getting started on the assignment and completing it as the writer intended. The writer should try to avoid too frequent use of this type of directions:

"Read the references listed and answer the following questions."

Questions: Questions and problems used in assignment sheets are not to be considered as test questions. They are simply instructional devices designed to motivate and guide the student in "digging out" from the reference material the information intended to be presented in the assignment. They are the Step 2 of a lesson, so to speak.

Formulating good questions and problems for an assignment sheet is admittedly a difficult job and one that requires the writer to be on a constant lookout for poorly worded, ambiguous, and ill-chosen questions that might be written unwittingly. The questions selected should take into account the educational background and experience of the average class member; questions suitable for experienced adults are seldom suitable for students of high

school age. In general, questions used in assignments should conform to the following standards:

1. The questions should be of the type that require terse, concise answers rather than lengthy "essay" type of answers which place undue emphasis upon the students' ability to write. For students of high school age, it is preferable to form a question around only one thought or idea rather than a combination of several ideas.

2. Questions should call for answers that are based on research and reasoning in-so-far as is possible. Those which require merely copying parts of the text or paraphrasing portions of references have little or no educational value. This also applies to copying a drawing from a book.

3. Obviously, problems to be solved, as in mathematics, should be related to the occupation and have a practical application, as illustrated in the following examples which require identical arithmetical calculations:

A current of 5.7 amperes at 115 volts will flow through what resistance?	An electrician wishes to replace the heating element of an iron which draws 5.7 amperes at 115 volts. What resistance should he specify for the new element?
Express as a decimal fraction: 38 ÷ 7.	A ring gear of a certain differential has 38 teeth. The pinion gear has 7 teeth. What is the gear ratio?

4. Particular care should be taken to avoid using poor questions similar to the types given below which were taken at random from courses used in the past. Many could be improved by rewording; others by breaking them up into two or more questions, while some are "hopeless".

a. Avoid asking questions which are vague and indefinite as to what is wanted in the answer and how much in detail the answer should be made. Examples:

What is your opinion of the description given in the text on _____?

Write one or two paragraphs on ____ _____?

How does a carburetor work?

b. Avoid asking questions which require too lengthy an answer or contain too much technical information. Chapters could be written about the following:

Explain the electron theory of electricity.

Explain the operation of a pentagrid converter.

What are the various types of endorsements used on checks? Illustrate each. What is the legal significance of each?

Explain the various methods of chucking work in a lathe.

c. Avoid questions which are so elementary that they border on being "silly". Examples:

Should an air filter (on an automobile) be kept clean?

Is sanitation important from the standpoint of a meat cutter?

What is the purpose of the cooling system of a car?

Why should a mechanic be careful when removing broken glass from a car door?

d. Avoid questions which in themselves are too long or cover too many different ideas:

> What is orange peel (in painting) and tell how it is formed. Tell what effect air pressure at the gun will have on the formation of orange peel; what effect fast and slow thinners will have on its formation; tell of the effect of too much thinner, distance gun is held from work, and all other factors which may effect orange peel formation.

e. Avoid questions which are so worded that they make the answer apparent through the use of qualifying adjectives or adverbs such as very, always, necessarily, and the like. This type of question can usually be answered with "yes" or "no", which is another thing to avoid in asking questions. Examples:

> Will sanding rust spots on a body panel always kill the rust?
>
> Is it necessary to take very fast strokes when sawing with a hand hacksaw?
>
> Why should a delicate pressure regulator not be dropped?
>
> Is it always true that ruined connecting rod bearings are caused by insufficient oil pressure?

f. Avoid questions which "give away" the answer to a preceding question:

> What is the acid solution used in storage batteries called?
>
> What is the usual ratio of water and acid in the electrolyte of storage batteries?

g. Avoid questions which are wholly irrelevant and which might well be answered, "What difference does it make?"

How many elements are there and what was the latest discovered?

Who do you think contributed most to the automotive industry? Haynes? Ford? Oldfield?

(In auto mechanics course.) What is the chemical composition of petroleum?

What is a machinist's scale made of?

EXPERIMENT SHEETS

Experiment sheets are valuable in supplementing other types of assignments in order to put over certain chemical and physical principles related to the students' work which are difficult to explain by words alone. It is not intended that the related subjects class become an experimental laboratory, yet occasional student activities of this type, aside from having definite instructional values, add a certain amount of zest and variety to a course of study. The cooperative part-time student seldom has an opportunity to experiment while on the job, and unless afforded the opportunity to do so in the related class-- or perhaps a regular science class-- will never receive the benefits which are derived from experimenting with and verifying the basic physical laws related to his trade or occupation.

No extensive outlay of high priced equipment is needed; in fact, "home-made" apparatus is preferred. In many instances, working arrangements can be made with the Science Departments of the school for borrowing certain of the higher priced items, such as galvanometers, meters, calorimeters, and the like. In a few instances, apparatus discarded by the Science Department have been put in repair by vocational students. This, itself, has a teaching value if not carried to the extreme.

Coordinators are urged to make out their annual budgets covering Instructional Materials rather than merely Reference Books. The former designation will permit him to spend a small amount each year in accumulating an adequate outlay of inexpensive apparatus for experimental work.

Experiment sheets should contain the following subdivisions:

1. Subject:
2. References: (if needed)
3. Explanation:
4. Materials and Equipment:
5. Procedure: (Including--CAUTIONS)
6. Questions: or Conclusions:

Drawings made for experiment sheets, or drawings required of the student, should be simple yet clear. In general, pictorial drawings are preferable to schematics or diagrams, at least until the student has progressed far enough to be able to read and make schematics.

As a rule, students are not capable of writing good conclusions to experiments. It is suggested that, at least at the outset, the conclusions be drawn through judicious questioning after the experiment has been performed.

PROJECT SHEETS

Projects, built individually or by groups of students, have a definite value in teaching related technical information. They have the added values of lending variety and interest to the course, and if done in a skillful manner, add materially to the "atmosphere" of the classroom when displayed. Well planned projects can be -- and should be -- both educational and interesting to individuals outside the class. They contain an element of "showmanship" and that can serve as an advertising medium for the vocational department.

The term project includes such items as working models, cut-away models, mock-ups, display panels for materials, wall charts, displays of manufacturing processes, and the like. A poorly planned or sloppily built project will be more detrimental than beneficial. The same applies to incompleted projects. When assigning or selecting projects, the ability of the student to carry through with the work should be considered.

Lengthy projects may be carried on for weeks, months, or even semesters along with the students' regular classwork. In general, project building should supplement the course of study and not become a substitute for it. Project sheets should contain adequate directions and suggestions but should be flexible enough to provide for initiative in designing and planning on the part of the students.

INFORMATION SHEETS

Information sheets written by teacher-coordinators are recommended under the following circumstances:

a. To present new information not treated in the basic references used in the course.

b. To enlarge upon information not fully treated in basic references.

c. To condense information treated too fully for a particular use.

d. To consolidate various items of information collected from several sources.

e. To adapt printed information to the level of the learner.

f. To make specific applications or to make analogies of items of information.

Such sheets should not be prepared if the desired information is adequately and suitably treated in a reference. Mimeographed sheets, however authentic, do not carry the prestige of the printed page. Other limitations in the use of information sheets are:

a. Cost in time and money to produce.

b. Difficulty in duplicating good illustrations.

c. Chance of errors and questionable statements unless material is checked by specialists.

d. Problems in filing, distributing, and keeping unbound sets of sheets.

TEST SHEETS

The Need for Test Sheets -- As has been pointed out before, the questions and problems included in various types of assignments are not "tests" at all in the usual sense of the word. The term test as used here is taken to mean a series of questions which are designed to measure the extent to which a student has acquired and retained that technical information which is essential to a particular unit of instruction in his course of study. These tests, of course, are to

be taken by the student without the assistance of reference books or other sources of information.

The chief value of technical tests -- at least from a vocational teaching standpoint -- is to disclose the weaknesses and limitations of the student, thereby serving as a basis upon which to analyze the student's needs and for making future study assignments. The test discussed here should cover one whole unit of instruction in the course of study and should be comprehensive enough to embrace all points of technical information which the student should possess about the subject.

For example, a part-time student training, say, as an auto mechanic will likely have had some amount of practical experience on the job with carburetors during his first year of training. He will have likely completed several assignments in the unit on Carburetion from time to time. He will have picked up additional information about carburetors here and there -- from fellow employees, from reading trade literature, manufacturers' literature, and the like.

It is only reasonable to assume that at some point in his training he should take a comprehensive test on the basic principles of carburetion for the purpose of finding out just what he knows about carburetors in general. The results of such a test may show, for example, that the student in question has an extensive knowledge of the "theoretical" principles involved but is very weak in all the practical aspects of carburetors. This fact, then, should be the cue for the teacher-coordinator to do some re-teaching and possibly alter the type of assignments given this student.

Such a comprehensive test may well be used as a diagnostic test -- to be given the student before he begins work on the course material -- to determine what information about the subject the student already possesses and what phases of the unit should be stressed. The test -- or one similar to it -- given later in the training period, will form a basis of comparison to determine the progress the student has made during the term in his technical studies of the unit.

Form of Test Sheets -- Due to the broad scope of unit tests, they must of necessity contain questions on many items of information in order to get a comprehensive coverage of the subject. For this reason, the questions used in the tests should be of the type which require answers written in the fewest number of words possible and which may be checked and scored in a minimum of time. The objective type test, despite certain limitations, best meets these requirements. The various types of questions usually associated with objective tests are:

a. True - false
b. Completion (word)
c. Completion (drawing)
d. Matching

e. Multiple choice
f. Identification

Each of the above type of question has its own peculiar limitations, and for this reason, it is recommended that a combination of two or more of these types be used in a test rather than one type used exclusive of the others.

ANSWER SHEETS

All assignment sheets and test sheets should be accompanied by answer sheets to be used by coordinators for checking the students' work quickly and accurately. It is suggested that coordinators, after writing a question or problem, immediately formulate the correct answer on a separate sheet. Naturally, coordinators should be careful that such answer sheets never leave their possession.

Designation and Classification of Instructional Sheets -- Instructional sheets are usually applicable to one specific trade or occupation. However, certain topics of information are basic to several occupations. For example, instruction regarding the use of "fastening devices" is needed by the machinist, the auto-mechanic, the sheet metal worker, and perhaps the electrician; the same related instruction unit -- if properly prepared -- will suffice for all of the group. Basic instruction on what we frequently call general topics -- such as are handled in group discussion periods -- can be prepared for entire classes. With these possibilities in mind, it has been decided to prepare material to fall under three classifications for each occupation:

1. General or orientation units for group discussion to be designated with "G".

2. Basic or fundamental units applicable to several occupations to be designated with "B".

3. Applied units for specific occupations to be designated with "A".

Related instruction outlines will be divided into units to be designated by Roman numerals (I, II, III, IV, etc.), and each topic in each unit will receive an Arabic numeral (1, 2, 3, 4, 5, etc.). For example, Unit I in the material prepared for machinists might be devoted to "Hand Tools" -- an assignment common to several of the manual trades; as a part of the hand tool unit might be an assignment (No. 10, say) devoted to the "Factors Affecting the Selection of Hack Saw Blades for Metal Cutting". This last named assignment, under this numbering system, would be given the key number of B-I-10:

B. -- Because it is one of the basic or fundamental units common to a number of occupations;

I. -- Roman one, the unit of the basic Units group devoted to hand tools;

10. -- The tenth topic of the Hand Tool Unit.

Test sheets to determine the students' mastery of instructional units or assignments are regarded as properly separate from assignments themselves, but when prepared they should carry the key number of the assignments for which they are prepared. These tests will be distinguished by a capital "T" and the test number added to the number of the assignment itself. For instance, the test sheet -- or other device used for that purpose -- for assignment B-I-10 described above would be designated as "T2" and the designation would be "B-I-10. T2".

The numerical designation of each assignment sheet, or other instructional sheet should carry a date. It may be carried after the assignment designation in this manner: "B-I-10/6-47". The numeral "6" of course refers to June, and the "47" to A. D. 1947.

Sample Instructional Sheets -- Sample instructional sheets of various types, which conform as closely as possible to the format and standards which have been adopted, are illustrated in the following section. Coordinators are urged to follow these samples as closely as possible when writing assignment sheets either for new courses or as supplementary sheets for existing courses.

Assignment Sheet
in

AUTO MECHANICS

Subject: Construction and Action of Storage Batteries

References: Automotive Mechanics - Crouse pp. 181 - 185
Elements of Automotive Mechanics - Heitner, et al. pp. 285 - 290

Advanced reading:

Elements of Electricity - Hausman pp. 57 - 64

Explanation: The term "storage battery" might suggest that electricity is stored up in the battery. This is not true; -- electricity cannot be stored in batteries. What actually happens is that the charging current produces a chemical action which makes the lead plates "unlike" in composition and thus meet the same requirements as those of a primary cell. (See Assignment, Primary Cells)

This chemical action is a complicated process and is not generally understood except by chemists. It is the purpose of this assignment to explain the elementary chemical processes which take place, both in charging and discharging of storage batteries, and to point out the conditions which affect this chemical action.

NOTE: The term "battery" is used to denote two or more cells connected in series for the purpose of increasing the voltage. Most automobile batteries are composed of three which operate independent of each other, but which are connected together in series just as two or more dry cells may be connected together in series to produce a higher voltage. (Experiment No. E-16)

Directions: First, perform Experiment No. E-19.

Study the reference material listed.

Answer the following questions:

Questions:

1. Describe briefly the construction of the common type of battery case.

2. Of what material are the perforated plate frames made? Why?

3. What material is contained in the grid perforations of the positive plates? Negative plates?

4. How can one distinguish by sight between the positive and negative plates?

5. What is the purpose of the separators? Of what three materials are they commonly made?

6. Sketch a cross section of the most common type of separator.

7. What does "glass insulated" battery mean?

8. What does the term "17 plate" battery mean?

9. Why must the separators be porous?

10. The "electrolyte" of a battery consists of what two substances?

11. What is the meaning of "specific gravity"?

12. What is the normal specific gravity of the electrolyte of a new and fully charged storage battery?

13. With what is the specific gravity of cells commonly tested?

14. What changes take place in the electrolyte as the battery is discharged?

15. What changes take place when the cell is being charged?

16. What is the normal voltage of one charged lead cell?

17. (a) What does the term "capacity" of a battery mean?
    (b) What is the unit for measuring battery capacity?

18. What determines the capacity of a cell?

19. A certain battery can deliver a maximum of 50 amperes of current for two hours. Can this battery deliver 100 amps. in one hour? Explain.

20. How many positive plates does each cell of a 19 plate battery contain?

Thought Questions

21. If a positive and negative place of one cell of a battery has a "dead" short, how will this affect

(a) The output of this cell?
(b) The voltage of the other two cells?
(c) The voltage of the battery?

22. Give two reasons why there is so much battery failure in the winter.

23. Modern automobiles require batteries of higher capacities than those of 10 to 15 years ago. Why?

Answer Sheet
for

AUTO MECHANICS ASSIGNMENT

Subject: Construction and Action of Storage Batteries

1. It is box-like in shape, containing three compartments and is made of hard rubber or other acid resisting material.

2. (a) Lead-antimony metal.
   (b) To make them acid resistant and to give them rigidity.

3. (a) Lead peroxide.
   (b) Spongy lead.

4. The lead peroxide of the positive plate is dark brown, while the lead of the negative plate is dull gray.

5. (a) To prevent the positive and negative plates from shorting out.
   (b) Wood, spun glass, and rubber.

6.

7. It means that spun glass separators are used.

8. That each cell has 17 plates.

9. To permit the liquid to flow between the plates.

10. Sulphuric acid and water.

11. How many times heavier than water a substance is.

12. 1.280 to 1.300

13. A hydrometer.

14. The sulphuric acid changes to lead sulphate and water.

    The specific gravity of the electrolyte lowers.

15. The lead sulphate and water change back to sulphuric acid.

    The specific gravity rises.

16. 2 volts (2.1 maximum).

17. (a) The amount of current can flow from it in a given time.

    (b) Ampere-hour.

18. The total area of the plates which contacts the electrolyte.

19. No; the chemical action between the plates and electrolyte

cannot take place fast enough at high rates.

20. Nine.

21. (a) There will be no output.
    (b) The voltage of the other two cells will not be changed.
    (c) The battery will show 4 volts.

22. (a) The chemical action of the battery slows at low temperatures.
    (b) Thicker engine oil causes the starting motor to take more power from the battery.

23. Because of many new electrical devices: fans, lighters, heaters, etc.

Experiment Sheet
in

BASIC ELECTRICITY

Subject: Lead-Acid Cells

Explanation: In a previous experiment on Primary Cells, it was shown that a current of electricity may be made to flow through a wire connecting two "dissimilar" metals which are surrounded by an "electrolyte" of dilute acids or alkalies. It is the purpose of this experiment to show how two "like" metals in an electrolyte can be made to produce a current under certain conditions. Cells of this type are called "secondary cells", or more often, "lead-acid cells".

Materials and Equipment:

- 1 voltmeter (0--10v. range)
- 1 dry cell
- 1 glass tumbler
- 1 flashlight bulb, 1-1/2 v.
- 2 strips of lead, approx. 1"x4"
- 2 12" lengths bell wire
- Sulphuric acid

Procedure:

1. Scrape the strips of lead bright. Mark one strip "A" and the other "B". "Skin" all ends of bell wire. Punch nail hole in one end of both strips about 1/4" from end. Connect one wire to each strip, making sure of good connection.

2. Fill tumbler about half full of water and slowly add sulphuric acid until tumbler is about 2/3 full WHILE STIRRING WITH GLASS ROD.

CAUTIONS:

NEVER ADD WATER TO ACID!

TAKE CARE ACID DOES NOT CONTACT EYES, HANDS, CLOTHES OR PERSON!

3. Connect voltmeter to wires as shown in Figure 1, and place both strips in tumbler about 1" apart.

   Is there any deflection (movement) of the pointer of the voltmeter? _____

4. Remove the voltmeter as shown in Figure 2. Connect center dry cell terminal to "A" and the outside terminal to "B".

What action do you note? Describe. _____

_____

At which strip does this action occur? _____

What changes in appearance take place in either strip?

_____

5. Remove the cell after about five minutes and reconnect the voltmeter with the + terminal connected to "A".

Is there any deflection of the pointer of the voltmeter? __

If so, what voltage is indicated? _____

6. Remove the voltmeter and place the 1-1/2 v. flashlight bulb in the circuit.

Did the bulb light? _____ If so, how long did it burn? __

Figure 1.

Figure 2.

Conclusion: 1. From this experiment I conclude that a voltage of about _____ v. can be made to exist between the two lead plates of a lead-acid cell provided _____

_____

_____

2. I found that the strip (plate) which was connected to the + terminal of the dry cell became the _____ plate of the lead-acid cell and that its color was _____

_____

Key to Outline

Project Sheet
in

AUTO MECHANICS

Name of project: "Spark Plug Ailments"

References: Champion Spark Plug Service
Champion Spark Plug Co., Toledo, Ohio

Materials: Several discarded spark plugs.
3/8" panel board, approximately 14" x 36"
1" x 2" white pine molding for panel board
8 to 10 blank cards, 3" x 5"
White shellac

Explanation: An experienced mechanic can usually tell by the appearance of a spark plug whether or not it is functioning properly. He can also usually tell the cause of plug failure and thus diagnose many ordinary engine troubles. In order to assist the student in auto mechanics in understanding spark plug troubles, the following project is recommended:

Procedure:

1. Collect several discarded spark plugs from service stations and garages. Do not attempt to clean them.

2. Study the reference material concerning spark plug troubles. Select a suitable plug to illustrate the following troubles:

   a. Cracked insulator
   b. Caked grease and dirt on insulator
   c. Gas leak around insulator
   d. Broken core
   e. Oil fouling
   f. Gas fouling
   g. Burned out electrodes
   h. Crusted electrodes

3. Select two plugs which show evidence of good physical and operating conditions. Clean ore according to acceptable methods.

   NOTE: Since the color and condition of the core,

electrodes, and deposit plays an important part in diagnosing spark plug troubles, it may be well to consult an experienced person to assist in selecting the various plugs for the project.

4. On a piece of wrapping paper, lay out centers for holes in which to mount the spark plugs. The suggested dimensions in Figure 1 may be used.

Figure 1

Figure 2

5. Place layout paper on the panel board and mark hole centers with a punch or nail. Drill holes for each plug approximately the thread size of the plug.

6. Attach 1" x 2" molding around the four edges of the panel board as shown in Figure 2.

7. Prepare 3" x 5" cards for each spark plug according to the following suggested example:

GAS FOULED PLUG

Symptoms: Dry, fluffy carbon deposit on entire firing end of spark plug.

Probable causes:

1. Too rich a fuel mixture
2. Poor choke adjustment
3. Too cold a plug
4. Plug cleaned too often

Results on engine performance: Spark shorts through carbon, causing misfiring.

Possible remedies: Lean out the mixture; correct choke adjustment; replace with hotter plug.

8. Mount plugs in holes up side down (except the plug with a cracked insulator) and wire secure with safety wire.

9. Mount cardboards under each spark plug. Brush clear shellac over entire panel.

on

AUTOMOTIVE ENGINE PRINCIPLES

I. Complete the following to make a true complete statement:

1. A complete cycle of an automobile engine consists of four strokes called: 1._____, 2._____, 3._____, and 4._____.

2. During the intake strokes, the position of the intake valve is_____ and the exhaust valve is_____.

3. The tendency of matter to remain stationary when acted upon by a moving force, and to continue to move after the force ceases, is called_____.

4. In one revolution, the crankshaft revolves_____degrees. In one cycle it revolves_____degrees.

5. Expressed in degrees, each stroke of a piston is_____degrees from the next.

6. The relation of the volume of a cylinder when the piston is at the bottom, to the volume when the piston is at the top, is called_____ _____ratio.

7. The pressure of the mixture when the piston is at top dead center is called_____pressure. The unit for measuring pressure of gases is_____.

8. The pressure within a cylinder caused by the explosion (burning) of the mixture is called_____pressure.

9. The pressure in a cylinder at the moment of the explosion of the mixture is approximately_____times greater than the pressure immediately preceding the explosion.

10. Without altering the bore (diameter) of the cylinder, more power can be developed by increasing the_____of the cylinder.

11. The ratio of the amount of mixture actually drawn into a cylinder on the intake stroke, to the maximum amount the cylinder could hold, is called the_____of the cylinder.

12. This ratio is decreased by any restrictions in the air or mixture intake passages in any of the following parts: 1._____, 2._____, 3._____, 4._____.

13. On the exhaust stroke, the exhaust gases continue to flow out of the cylinder after the piston has reached the top because of the_____ of the moving gases.

14. On the exhaust stroke the exhaust valves in the average automobile engine do not close until the crankshaft has turned approximately _____degrees past top dead center.

15. If the compression pressure of the cylinders of an automobile engine are 110, 110, 90, 110, 100, and 110 lbs. per sq. in., the approximate combustion pressures of the respective cylinders are: _____, _____, _____, _____, _____, and _____ lbs. per sq. in.

16. In the above case, the uneven combustion pressures on the cylinders in their firing order would tend to make the engine_____.

II. Mark + for true and 0 for false opposite the following statements:

___ 1. An automobile engine is a form of heat engine.

___ 2. It develops its power from the fact that burning gases expand in volume.

___ 3. On the intake stroke, the intake valve opens when the piston reaches top dead center.

___ 4. The inertia of the fuel-air mixture and the exhaust gases have an effect upon the timing of the valves.

___ 5. Mixture continues to enter the cylinder after the piston has started upward on the compression stroke.

___ 6. The spark which ignites the mixture occurs slightly before the piston reaches top dead center on the compression stroke.

___ 7. A piston of an automobile engine travels faster on the power stroke than any other.

___ 8. When a piston travels either upward or downward, it moves at a higher rate of speed through the top 90° of the crankshaft rotation than it does through the bottom 90°.

___ 9. On the power stroke, the exhaust valve opens before the piston reaches bottom dead center.

___ 10. On the exhaust stroke, the flow of burnt gases out of the cylinder continues after the piston reaches top dead center.

___ 11. Most of the force applied to a piston is during the last half of the power stroke.

___ 12. The only way to increase the power of a cylinder is to increase its diameter (bore).

___ 13. An increase in the volumetric efficiency of a cylinder increases its power.

___ 14. The volumetric efficiency of a cylinder can be increased by increasing the size of the intake valve opening.

___ 15. Intake and exhaust valves are timed to open and close at top or bottom dead center of the piston.

___ 16. For best efficiency, the intake valve should be timed to close at the instant the mixture stops flowing into the cylinder.

5.	+	11.	0	16.	+
6.	+				

XII. COORDINATION

Meaning and Purpose of Coordination

The objective of coordination of industrial cooperative programs is to correlate all the helpful agencies and factors that contribute to the trade or occupational training of students. Many coordinators are confused concerning the actual duties of coordination. Some suppose that it requires visiting the various training stations and determining whether or not the students are at work, while others suppose that it requires no more than being a good "mixer" and visiting with business men, not necessarily on matters pertaining to the program.

In general, the duties associated with coordination fall into the following categories:

1. Placement of students on satisfactory jobs. It is the responsibility of the coordinator to select students and place them in an employment situation in such a manner that the job will be filled in a manner satisfactory to the employer and yet give the student opportunity to develop to the limit of his capacity.

2. Follow-up after placement. Placement on the job alone is not sufficient. Adjustment of the student on the job, consultation with the student, foreman, plant superintendent, and school instructors are necessary in order that the student may satisfactorily fill the industrial position.

3. Contacts with employers to establish cooperative relationships. The coordinator should continually meet industrial people, not only for the purpose of student placement, but also for the purpose of educating industry as to what the school is doing and how it is doing it, and for the purpose of uncovering ideas and suggestions for improving the school situation.

4. Assistance in making analyses. The coordinator should assist employers in making analyses of their trades or occupations which are to be incorporated into the training plans of students. If the coordinator has a good background in the techniques of trade and job analysis he does not necessarily have to have an intimate knowledge of the trade or occupation to assist in making a creditable analysis of it.

5. Assistance in building courses of study. He should analyze, or assist related subject teachers in analyzing, jobs or work experiences listed

in training plans for teaching content. He should also assist in obtaining necessary references and courses available from other sources.

6. Conferences with students. Because of his experience and contacts with employment conditions, the coordinator should confer with students and advise with them on both personal and employment problems.

7. Contacts with advisory committees. Under the direction of the local director, the coordinator should frequently contact his advisory committees and keep in close touch with their activities. He should also keep them advised as to his activities.

8. Checks on student rotation on the job. When students are placed as learners in industry, the coordinator should see that each student is given an opportunity to learn and is not exploited by keeping him on one particular type of job for unreasonably long periods. He must make certain that the student is rotated through jobs and gets well-rounded experience.

9. Contacts with employers, labor groups, and school administrators regarding over-all program. In his contacts, the coordinator should constantly endeavor to educate school administrators and labor and industrial people as to what vocational services are available and how they are carried on.

10. Relationships with vocational counselors. The selection of students and the preparation of training material must be based on job requirements. School officials, teachers, and counselors need information as to what is needed by employees in certain fields of employment. The coordinator should assist those who select and organize this information.

Coordinator's Weekly Schedule

In order that most benefit can be derived from the coordinator's activities, he should budget his time in such a manner that he will not be apt to overlook or neglect any one of the many duties of coordination.

The coordinator should have a weekly schedule which will not only enable him to discharge his duties more efficiently but will also establish a routine which will enable students, parents, school officials and teachers, and employers to contact him with a minimum of delay on matters pertaining to his program. A suggested schedule of activities is shown in Figure 12. It can be seen from this table that coordination consists of more than merely visiting training stations each afternoon.

Suggested Weekly Schedule for Teacher-Coordinators

Period	School Schedule	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
1st	First year group	Group discussion	Lesson assignments	Lesson assignments	Lesson assignments	Group discussion Lesson assignments	Miscellaneous office work
2nd	Second year group	Group discussion	Lesson assignments	Lesson assignments	Lesson assignments	Lesson assignments	Miscellaneous office work
3rd	Conference	Organize class work for week	Grade written work	Organize instructional material	Organize instructional material. Grade work	Organize instructional material	
LUNCH							
4th	Coordination	Interview employers on students' progress during past week.	Revise and organize instructional matter on basis of discussions on previous day Grade written work	Revisit training stations; check on students' work	Promotional activities; call on prospective employers; confer with committees, etc.	Grade written work; Make out records and reports; attend school meetings, etc.	
5th	Coordination						
6th	Coordination						

Figure 12.

Allowances must be made for varying such a schedule at certain times during each semester. For example, at the beginning of each school term when the coordinator is actively engaged in placing students, his entire time each afternoon may be required for conferring with employers, committee members, students, and parents. Whereas, at the close of each semester, when grades, records, and reports require considerable time, the coordinator may spend all his time at the school.

Planning Afternoon Visits -- Before the coordinator leaves the school for visiting training stations down-town he should determine which stations should be visited, the object of each visit, what material to take with him, and, in large centers, the route he will take. It is advisable that he not adopt a set pattern in the matter of visiting training station.

A copy of the coordinator's tentative itinerary for each afternoon he is out of the school should be left in the school office. Of course it is virtually impossible to adhere to the planned itinerary strictly, but leaving an approximate schedule gives school officials at least some idea of the coordinator's whereabouts in case he must be contacted. In cases where his plans have been

changed to a considerable extent, a telephone call to the school office will rectify the situation.

Visiting Training Station -- The coordinator should go about the job of visiting training stations in a business-like manner. He should keep in mind that not everyone who sees him understands the nature of his coordination work, and that a casual manner of going about his work will likely cause adverse criticism.

As a rule, the coordinator should contact the employer, manager, or foreman upon entering a training station for the purpose of securing permission to visit. Despite the fact that the majority of employers will not insist upon this "formaility", it is none the less a good practice.

Short, routine inspections should be made at least once a week to see if the student is on the job, to determine the type of work he is doing, and to give the employer an opportunity to discuss with the coordinator any problem that may have developed. At least once a month, conferences should be held with each employer and the student's training activities discussed. The suggestions and recommendations growing out of these conferences should form a basis for determining the student's study assignments.

The coordinator should be on the alert to detect changes in the student's attitude toward his work and to meet any undesirable situations that may be developing. He must note the attitude of the student toward the occupation, the job at hand, the employer, fellow employees, his related studies, and classmates. Any sudden change in attitude on the part of the student should be noted and analyzed as to cause, effect, and possible remedies. It is easier to correct an unfavorable situation during the development than to wait for it to "come to a head". The coordinator who allows unfavorable situations to develop without attempting to forestall them is not performing his work properly.

The coordinator should see that every employee with whom the student works understands the objectives of the cooperative arrangement: why the student is working and under what conditions. He should occasionally discuss the training being carried out with other employees in order to get their viewpoint.

Conduct While Visiting -- There are several rules of conduct which the coordinator should observe while visiting training stations. He should keep in mind that effective coordination can result only if he is welcome in the various places which he visits. These rules can best be given in "Do" and "Don't" columns.

DO

1. Be alert. Observe what is going on without appearing to "snoop".

2. Be friendly with everyone without fraternizing with them.

3. Show an interest in the work in progress. Be curious; ask questions if the opportunity presents itself.

4. Take notes (after leaving) on items which may be used for a conference with the student or for study assignments.

5. Be quick to sense the employer's desire to terminate a conference.

DON'T

1. Don't call attention to errors, bad practices, unsafe conditions, and the like while visiting the student. Do so in private conference.

2. Don't try to demonstrate to a student how to do a job which he is assigned.

3. Don't pose as an expert or authority on any matter concerning the work going on.

4. Don't request a conference with the employer when he is obviously busy.

5. Don't engage in so-called "friendly" arguments on controversial questions.

6. Don't interrupt or interfere with the student's work.

7. Don't let a visit degenerate into a "bull" session with the employer or employees.

8. Don't appear to be loafing or just "passing the time".

9. Don't handle tools, machines, or equipment unless invited to do so.

Coordination Records and Reports

The Coordinator's Diary -- Information and data obtained through coordination

activities form the basis for building the course of study for each class member. The vocational needs of each student -- obtained through coordination -- become his individual curriculum. Every coordinator should keep adequate records of his coordination activities, including notes, comments, and other pertinent information. Such records need not be formal but may consist of informal entries in the "little black book", so to speak. Such entries are illustrated below:

Thurs. Sept. 11

Conferred with Mr. Baker, Mgr. Hardwicke Etter Co. Worked out training plan for Tommy John. Suggests: "Stress accuracy, — job ethics."

Interviewed Mgrs. of Holt Groc. and Adams Food Stores concerning placing new student as meat cutter. Can possibly work out plan with Adams. Will see again Sat. 10 a.m.

Picked up signed training plans from State Theatre, City Cleaners, Memorial Hospital, & R. E. Holt Bakery. Students doing ok.

Friday, Sept. 12

Made out requisition for additional reference books (printing & refrigeration).

Typed up training plans for Tommy John and Henry Watts. Ordered additional VIE-010's from State office.

Made out Permanent Record Cards for new students.

Attended faculty meeting at 4 p.m.

Figure 13.

Closing Reports -- Notations such as those contained in Figure 13, showing hours spent daily in coordination, contacts with employers, and the like, are needed in order that the coordinator may make out his semester's closing report accurately. Closing Reports VIE-005 (IE-1 Co-op) -- are due in the State Office at the close of each semester. Data obtained from this report are needed before the local school where the coordinator is employed can be reimbursed for salaries paid vocational teachers. A separate report is required for each section or class taught by the coordinator.

Much of the information contained in this report is the same as that in the Organization Report. In fact, the headings of both reports will be the same unless there has been a change in the class schedules. It is suggested that the Closing Report for the first semester be sent in with the Organization Report for the second semester.

INFORMATION DESIRED ON CLOSING REPORT

Line--Date Class Closed: This date corresponds with the "planned closing date" on the Organization Report and must be the date that classes were actually closed at the end of the school year. Since a Closing Report is required at the end of each semester, and since the same form is used for both semesters, be sure and indicate the semester for which the closing report is being submitted as illustrated in Figure 14.

Column--Students in Class When Report is Made: All students who are regularly enrolled in the industrial cooperative program at the time the Closing Report is made are to be listed alphabetically with girls listed separately. Each student's name should correspond with that listed in the Organization Report. Naturally, any students who drop from the program during the semester will not be listed in this column.

Column--Total Hours on Job: This information is obtained by the coordinator from the total of the hours per week listed on the student's daily Job Report. It should represent the total hours worked during the semester, excluding Saturdays.

Column--Total Hours in Class: This information is obtained from the class register.

Line--Students Enrolled Since Organization Report: Names of students listed in the column above. The listing should follow the same procedure as was described for a similar section in the Organization Report. Those who enter late and drop out before the end of the semester should also be listed in this column and indicated with "Dropped".

(LIST ON BACK OF REPORT OR ON A SEPARATE SHEET)

This form must be filled out completely and mailed in triplicate to your Area Supervisor, at the end of each semester. Reimbursement cannot be made until the report is received by your Area Supervisor. Forms are in triplicate; send all three copies to your Area Supervisor. One copy (pink) will be returned for local school files.

Date: January 11, 1970 Signed: James E. Lowe
Coordinator

Henry B. James
Local Director or Superintendent

Director, Industrial Education

TEA-463-1M-1585-B181

Figure 14.

Line -- Total Cumulative Enrollment: This cumulative total should include all students who have entered the class regardless of the time they spent in it.

Lines -- 3, 4, 5, 6, 7, and 8: These lines summarize the non-classroom activities of the teacher-coordinator and the coordination activities of the coordinator for the semester, and are obtained from the coordinator's daily report or "diary". These entries -- 3 through 8 -- pertain to both sections or classes combined and may be omitted from one of the two reports if desired.

Employers' Periodic Rating -- One phase of coordination work is that of securing the employers' periodic ratings on students each six weeks. For this report, a mimeographed form is suggested and is shown in Figure 15. There is no prescribed method of distributing this form and collecting it from the several employers. Some coordinators send them out and receive them by mail each six weeks. However, there is a definite advantage to carrying the forms to the employers in person, and, if possible, having him make his rating while the coordinator is present. This affords an opportunity for the two to discuss the strong and weak points of the students.

It should be pointed out here that employers are frequently prone to rate students higher than their actual progress warrants, and their ratings must be reconciled with the coordinator's own rating of the student for purposes of arriving at an equitable grade to satisfy local school requirements.

Students' Permanent Record Card -- The six-weeks ratings of employers are entered on each student's permanent record card, illustrated in Figure 16. Other data are retained from the coordinator's class records and the student's daily job report.

Follow-up Record: A space for notations on follow-up contacts with the student is provided on the reverse side of the Permanent Record Card. Such records, to determine the employment status and other data about students who have graduated from the cooperative program should be kept for at least two years. This information is valuable for evaluating the cooperative program, for justifying it, and for guidance purposes. It is also necessary for making the Annual Report on industrial cooperative classes.

Annual Reports -- Each year an annual report from each industrial cooperative program is prepared for the U. S. Office of Education; it presents various data on current classes and placement records for the classes of the preceding year. No exact date is set for making this report, but forms are mailed coordinators during the second semester each year for completion and return to the Texas Education Agency before the close of school.

Following is a chart showing the dates on which Industrial Cooperative Training Reports are due. This chart also shows the proper report and to whom sent.

EMPLOYER'S PERIODIC RATING
for
Industrial Cooperative Students

Student BILL LAWSON Date FEBRUARY 26, 1959

Training Station CITY MACHINE WORKS Rated by H. M. Jonkins, Foreman

DIRECTIONS: Please circle one of the numbers (from 1 through 10) opposite each of the five factors in the left-hand column which you think nearest indicates the student's rating for the past six-weeks school period.

FACTORS	UNSATISFACTORY	BELOW AVERAGE	AVERAGE	ABOVE AVERAGE	EXCELLENT
PROGRESS	1 2	3 4	(5) 6	7 8	9 10
Has he advanced in skill and knowledge during the past 6 weeks?	Has made almost no progress.	Has progressed in only a few phases of his training.	Has made average progress in his training.	Has advanced beyond expectations.	Exceptional progress made in skills and knowledge.
INITIATIVE	1 2	3 4	(5) 6	7 8	9 10
Can he originate and carry through on ideas?	Has to be told everything to do.	Seldom goes ahead on his own.	Goes ahead on routine matters.	Frequently looks for additional work to do.	Always finding jobs that need to be done.
RELIABILITY	1 2	3 (4)	5 6	7 8	9 10
Can the student be depended upon in his work?	Can seldom be relied upon.	Frequently fails to come through.	Can be relied upon in most cases.	Only occasionally fails to come through.	Can be relied upon implicitly in all matters.
WORK ATTITUDE	1 2	3 4	5 6	(7) 8	9 10
Does he have a good attitude toward his work?	Bored; shows little enthusiasm.	Rationalizes his shortcomings and mistakes.	Normally enthusiastic about his work.	Tries to improve his work in most cases.	Is always alert to finding ways of improving work.
COOPERATION	1 2	3 4	5 6	7 (8)	9 10
Does he work well with others?	Always wants his own way; is hard-headed.	Hard for others to work with.	Usually congenial and easy to work with.	Works well with his associates.	Cooperates fully in all matters.

ADDITIONAL REMARKS: Needs to develop more speed in work - Seems to be afraid of spoiling a job -

V. PERSONAL DATA CONCERNING STUDENT

A. Scholastic ability (quality of work in other classes):

Has 82 grade average in other classes.
Tries hard to improve

B. School activities (clubs, offices held, achievements, etc.):

V.I.C Chapter President - 1958
Hi-Y Vice-President - 1957

C. General remarks (conferences with students, attendance record, home environment, etc.):

Parents interested in Rufus and his work. They are of moderate means financially.
During first two months did not seem to have his heart in school and job. Was frequently absent. After this period work and attitude both in school and on the job improved. This was especially true during the second year.

XIII. PUBLICITY

Function of Publicity

The purpose of publicity for vocational programs is to interpret vocational education to the public; to clarify the understanding of both student and school patrons regarding the aims, objectives, philosophy and the various services of vocational education, and to help them to appreciate the advantage of pre-employment trade training as one step toward a more efficient, enlightened, and happy citizenry.

Acquainting the public with these services is a phase of education itself. The dissemination of publicity regarding industrial cooperative training is definitely as much a part of the teacher-coordinator's duties as doing guidance work, counseling with individuals, and placing students in employment. Good publicity arouses interest and secures cooperation of the public in providing more efficient school programs for the benefit of future citizens.

Publicity in Starting a New Program

The first phase of publicity with which the coordinator will deal is that of "advertising" the starting of a new program in the community. Students, parents, and businessmen must understand the objectives, advantages, and working details of the program, and the coordinator is the logical person to supply this information.

He has at his command several media of publicity: talks before school and business groups, newspaper items, radio "spot" announcements, letters, and the like. Each of these types of publicity requires a somewhat different technique. Space does not permit a comprehensive explanation of each in this handbook. However, a few comments and suggestions on the use of talks to groups, newspaper articles, and letters will be given.

Talks to Groups--The coordinator does not necessarily have to be an accomplished speaker in order to publicize his cooperative program. He should be able to explain briefly the major details of the operation of the program and to show the advantages of cooperative training to various groups. For example, part or all of the following points may be used at some time by the coordinator in talks to various groups:

New Vocational Program in High School

Cooperative Training in Several Occupations Available to Junior and Senior Students

Classes in cooperative occupational training are the most recent additions to the New Austin High School curriculum, according to a recent announcement by Superintendent Homer K. Brown.

T. H. Green

These classes afford students of Junior and Senior standing both practical and theoretical training in a variety of trades and occupations.

Practical work experiences are provided the student through part-time employment each afternoon at some cooperating business or industry within the city. The local school provides technical instruction on a supervised basis in specially scheduled classes. Students may enroll in two other high school subjects needed for graduation.

The course is set up for two years of training and carries four affiliated credits. Students receive wages comparable to those paid beginning workers in the same occupations.

Typical occupations acceptable in the program are: auto mechanics, auto body repairing, electrical work, building trades, meat cutting, machine shop work, radio servicing, refrigeration servicing, welding.

The program will operate under the direction of T. H. Green, Coordinator. Mr. Green will be responsible for the selection and placement of students and will correlate their practical and technical training.

An advisory committee of local business men has been set up by the school to assist Mr. Green in organizing and operating the new program. The committeemen are: Thomas N. Blank, Manager of Howard Hardware Company; Roy Williams, Manager of Acme Electric Co.; J. J. Jones, Secretary of the Chamber of Commerce; James Johnston, Business Manager of the Central Trades Council; and Tom Smith, mechanic at the ABC Garage.

In commenting upon the new vocational program, Superintendent Brown said, "We feel that the inclusion of this type of program will do much to provide the youth of New Austin with a well-rounded educational program that will fulfill the need for practical; down-to-earth training. It will enable that large portion of our students who desire to become occupationally competent to enter full-time employment upon graduating from high school."

Figure 17.

ADVANTAGES OF COOPERATIVE TRAINING TO THE SCHOOL

1. Provides for vocational training without an extensive outlay of equipment and materials.

2. Helps the school keep abreast of modern trends in business and industry.

3. Helps meet the training needs of the community without over-training in any one trade or occupation.

4. Provides a terminal course for students who do not continue their education beyond high school.

5. Provides a qualified staff member to assist in guidance work.

ADVANTAGES TO THE STUDENT:

1. Provides for a certain amount of selection and "try out" in vocations.

2. Provides opportunity to learn a trade or occupation while earning a high school diploma.

3. Provides greater assurance of full-time employment in chosen occupation.

4. Provides training on real jobs under real conditions.

5. Offers opportunity to learn the technical information of a trade as well as the manipulative skills.

6. Provides opportunity to establish a reputation on the job through two years of experience.

ADVANTAGES TO THE EMPLOYER:

1. Provides a better all-round employee than he could ordinarily afford to train himself.

2. Provides assistance in selecting qualified personnel.

3. Makes available full-time employees trained in his own plant.

4. Offers opportunity to participate in an educational enterprise.

Preparation of Newspaper Articles -- Several times during the school year the coordinator will have occasion to release announcements, new items, and interest stories about his cooperative classes. In most cases the newspaper will prefer to have one of its reporters write the story after an interview with the coordinator. In some instances, however, the newspaper -- especially in the smaller centers -- may prefer to print copy prepared by the coordinator, making it advisable for him to know something of the techniques of writing newspaper articles. The following suggestions are intended to assist him in preparing publicity copy:

1. Newspaper articles are of two types: news stories and feature stories. The feature story differs from the news story in that it usually emphasizes the "human interest" element. Both types of articles are necessary to properly publicize school activities.

2. Both types of newspaper stories on vocational programs should be factual. The facts should speak for themselves and the writer should never attempt to "color" the story by injecting his own opinions.

3. If the coordinator feels that his article requires a certain amount of "editorializing", he should make sure that the comments come from some person of authority other than himself, and he should use "quotes" in all cases. For example, the following statement in a newspaper article has far more weight than any number of editorial comments made by the coordinator: "In discussing cooperative training before the Businessmen's Luncheon Club, Superintendent Brown said, 'We feel that this program does much to bridge the wide gap that separates the school and business and industry.'"

4. A good newspaper story seldom starts at the beginning and works toward the climax as is done in fiction writing. The opening paragraph is the most important and should contain the gist of the story.

5. The opening sentence -- or at least the first paragraph -- should answer the following questions: Who? What? When? Where? Why?

6. Sentences, paragraphs, and even words must be short for easy reading.

7. Use action verbs. The active voice is more forceful than the passive voice. "Graduates receive training certificates" is better than "training certificates are received by graduates".

8. There should be a "follow-up" story for every news item printed about the vocational program. The announcement that the school has inaugurated a cooperative training program should be followed

within a reasonable length of time by a story on enrollment, placements, and other data about the program. Likewise, such an item as "Cooperative Students Plan Employer Banquet" should be followed by "Students Honor Employers at Banquet" when the function takes place.

9. Too much publicity is worse than none at all. Avoid the use of "Ballyhoo" and publicity stunts. Do not mislead the public into expecting more of your program than can possibly be accomplished.

10. Clear all publicity releases through the proper channels. Learn the school policy regarding publicity and adhere to it.

11. Miscellaneous suggestions on preparing copy:
    - Use a typewriter.
    - Double space.
    - Do not write the headlines.
    - Indicate who prepared the copy -- it will assist the editors.

NOTE: Coordinators should keep clippings of all newspaper publicity, and send extra clippings to their District Supervisor.

A sample of a newspaper announcement of the opening of a new cooperative training program is shown in Figure 17. It is well for the coordinator to have a small cut of himself similar to the one illustrated; newspapers frequently request them to accompany a news item. Photographs attract attention and cause readers to notice articles which they might otherwise overlook.

Letters to Students and Businessmen -- Newspaper articles are indispensable in publicizing the vocational program, yet they do not have the <u>personal element</u> associated with a letter. An example of a letter sent to a select group of potential students is shown in Figure 18. Although it is much less trouble and expense to mimeograph the body of such letters, they are far more effective if typed.

Frequently it is advisable to use <u>personal letters</u> from the superintendent of Schools to a select group of businessmen. Letters of this type are especially valuable in assisting a new coordinator in making his initial contact with a potential employer whom he has not yet interviewed. It also reflects sincerity and a desire to render greater service on the part of the school. A sample of such a letter is shown in Figure 19. Of course a letter of this type should be sent only to employers whose place of business meets acceptable standards.

NEW AUSTIN PUBLIC SCHOOLS

NEW AUSTIN, TEXAS

August 12, 1959

Dear Harry:

Are you interested in receiving training in an occupation of your choice during your last two years in high school?

If so, it may be possible for you to enroll in a new occupational training course which has been added recently to the list of high school subjects. In this class, called Industrial Cooperative Training, students are employed each afternoon in their chosen occupation in places of business in the city. In addition to receiving practical work experiences, they are paid a fair weekly wage for the work done on the job. Mornings are devoted to the study of regular high school subjects, one of which is a special vocational class in which the students study the "Why and Wherefore" of their specific occupations.

This is a two-year course and carries two affiliated credits per year. Students enrolled may take two other subjects needed for graduation and thus earn a total of four credits per year -- a normal schedule. This plan enables the student to prepare himself for full-time employment and at the same time satisfy graduation requirements. Some eight or ten occupations will be offered this year, the selection depending upon the popular demand of the students. In general, choices may be made from the following types of occupations: auto mechanics, auto body repairing, building trades, drafting, electrical trades, machine trades, printing, radio and television servicing, refrigeration servicing, welding, and several others which require at least two years of training.

If you are interested in obtaining further information about this new course, you may contact Mr. T. H. Green at the High School any morning during the week from 9 to 12 noon. If it is not possible for you to come in person you may mail the attached blank to Mr. Green at the High School.

Yours very truly,

Marvin V. Winters

Marvin V. Winters
Principal

Figure 18.

Features and Other Publicity Devices

In addition to newspaper announcements and stories of a timely nature, there are many subjects for articles which may be used at various times throughout the school year and which may be classed roughly as feature stories. This type of article is much more difficult to write than "spot" news and should not be attempted by the coordinator unless he possesses an ability to write and has had experience in this type of writing. However, material on suitable subject matter may be prepared by him to be rewritten by a newspaper staff writer.

Some suggested subjects for feature stories that may be used at various times are:

1. Series of student interviews, including photographs of the student at work.

2. Employers' views on cooperative training.

3. Unusual or outstanding training situations.

4. Guidance values of cooperative training.

5. Annual training certificates awarded.

6. Students' views and reactions on working in industry.

7. Objectives and activities of Vocational-Industrial Club.

8. "Should Work Experience be a High School Requirement?"

9. How co-op students invest their money.

10. Interesting follow-up data.

11. Presentation of recognition certificates to training stations.

By and large, newspapers are anxious to obtain copy on such subjects as those listed above and usually have at least one staff member who specializes in this type of writing. The public is interested in its schools and enjoys reading about them, especially if the articles contain a liberal sprinkling of familiar names and places, and describe the achievements of the youth of

NEW AUSTIN PUBLIC SCHOOLS

NEW AUSTIN, TEXAS

August 15, 1959

Mr. H. T. Johnson, Manager
Norton Electric Company
123 North First Street
New Austin, Texas

Dear Mr. Johnson:

We are taking this means of acquainting various employers who are engaged in trade and industrial work within the city of a new course -- Industrial Cooperative Training -- which has been added to our high school curriculum, and which is intended to enable our school to render a more complete service to our local business and industrial establishments by supplying them with better trained personnel from among our graduates.

The Board of Education feels that the inclusion of this type of program will do much to provide the youth of New Austin with a well-rounded educational program that will fulfill the need for practical, down-to-earth training. It will enable that large portion of our students who desire to become occupationally competent to enter full-time employment upon graduation.

As the name of this course suggests, it is carried on through a cooperative arrangement between the businesses and industries of our city and the local schools; practical work experiences are gained by the student through part-time employment in some place of business -- such as yours -- during each afternoon. Studies of technical information related to the students' occupation are provided by our high school in a special class scheduled each morning. Students must be of Junior or Senior standing and must be at least sixteen years of age.

Our Mr. Green, recently appointed coordinator of this program, will make every effort to visit you in the near future and explain the operation of this program more in detail. If you decide that your place of business will be in a position to cooperate in training one or more students, we shall be very happy to include you on our "faculty."

Very truly yours,

Homer K. Brown

Homer K. Brown, Superintendent
New Austin Public Schools

Figure 19.

Several well planned feature stories have appeared in various local newspapers throughout the State in recent years. "Paste-ups" of some of these appear on the following pages. One particularly interesting type of publicity is that of paid advertisements of employers, featuring their trainees. A more elaborate type of illustrated feature story is that appearing in the rotogravure section of a Sunday paper.

Industrial Training Picking Up

Students Are Now Registering for Next Year's Work

One high school girl is a meat cutter, another a dental assistant. A high school boy works in the auto parts section of a motor company, another at a television studio, a third as an engraver.

Juniors and seniors from Miller and Ray High Schools may be found during the afternoons in many lines of work under the Industrial Cooperative Training plan.

Already pre-registering students for next school year are James Cosgrove, Miller coordinator, and Jack W. Humphries, at Ray.

SHIRLEY SEWARD, DENTAL ASSISTANT, CLOWNS
... with her ICT instructor, James Cosgrove

Vocational Students To Fete Employers

For the 29th time since 1935, students in the high school industrial training program will entertain their employers Friday night.

The annual banquet staged by the Vocational Industrial Club will start at 7:30 p.m. in the Wagon Wheel Restaurant. Speaker will be Jack Y. Smith, manager of industrial relations for the Cosden Petroleum Corp.

Smith will speak on the topic, "Where Will You Be in 1965?" He will discuss labor trends since 1955 and attempt to project them to 1965.

The banquet, featuring charcoal steaks, will be financed by the VIClub treasury—funds raised by the students in various projects. About 70 persons are expected to attend, including the 26 vocational industrial students, their employers, and other guests.

Welcome will be extended by Supt. Floyd Parsons of the Big Spring schools. Invocation will be led by Tommy Williams. Entertainment will include a bagpipe pantomime by Jackie Owens and Dalton Conway, a song by Lugenia Smith, and a piano number

Standard Courses Only Half The Training For ICT Pupils

Completion of the standard courses for high school graduation and college entrance is only half the training received by vocational students in Big Spring High School.

The other half consists of on-the-job training in the various vocational and industrial fields.

In addition to going to school, the students spend 20 to 25 hours per week on their jobs. Schedules are arranged so they can complete classroom work during the mornings and shift to the shops laboratories, etc. for the afternoons.

One hour each morning is spent on technical studies related to the various fields in which the students are training. Balance of the school time is spent in regular classes where they take the subjects required for graduation.

Another important part of the Industrial Cooperative Training Program is the Vocational Industrial Club, made up of ICT students. The club works to develop leadership, moral and spiritual qualities, and to assist the students in understanding opportunities and trends in the various vocational fields. The students also study such related subjects as insurance, loans, interest, as a part

fields as electricity, mechanics, the building crafts, nursing, laboratory technology, etc.

Coordinator of the program in Big Spring High is Louis Maneely.

While the program isn't set up to afford students to earn money while going to school, the earnings of the trainees form an interesting facet of the program. Maneely estimated the 26 pupils will earn $18,000 to $20,000 this school year.

Usual pay for a b dents is 75 cents pe some work up to as r after becoming profic trades. The U. S. D Labor sets up qual a training program, sure the students of program. Maneely w

Schedule for Releasing Publicity

Needless to say, the coordinator should plan his publicity campaign and not conduct it in a haphazard manner. Planning includes timing, which is one of the most essential elements in an effective publicity campaign. Following is a suggested schedule which a coordinator may use in making plans for publicizing his program. Of course, he may not (and probably should not) use all the media listed, but he should, however, give consideration to several of the most feasible publicity activities for his particular community and plan them far enough in advance to allow himself sufficient time to carry them out in a creditable manner.

SUGGESTED SCHEDULE FOR RELEASING PUBLICITY

MEDIA OF PUBLICITY	Before opening of school	At opening of school	During each semester	Once during year	At end of school
Newspaper announcements	X	X			
Newspaper features			X		
School publications			X		
School assembly program				X

XIV. CLOSING OUT SCHOOL YEAR

Training Certificates

Students who have satisfied the conditions outlined in their Training Plan and who have completed two school years of training are eligible for an Occupational Training Certificate, Figure 21, issued by the State Board for Vocational Education upon written request from the teacher-coordinator. A student who does not have a Training Plan on file in the State office, or who has changed his occupation during the training period is not eligible for this certificate unless the occupation to which he changed is closely allied to the original occupation.

Occupational Training Certificate

TEXAS EDUCATION AGENCY - INDUSTRIAL EDUCATION SERVICE

Cooperative Training Series

This is to certify that RUFUS J. JONES has been employed under the supervision of the New Austin Public Schools as a learner in Machinist Trade for a minimum of 2000 hours, including at least 360 hours of study of the technical phases of the occupation, and has satisfactorily met all the terms of his training agreement.

Whereof let this certificate with official signatures and seal bear witness: Given at Austin, in the State of Texas, this 31st day of May, A. D., 19 59.

THE STATE OF TEXAS

Thomas N. Black
FOR LOCAL ADVISORY COMMITTEE

Homer K. Brown
FOR LOCAL SCHOOL

C. M. Allen
FOR TEXAS EDUCATION AGENCY

Figure 21.

The usual procedure in awarding these certificates is to present them to graduates at the school commencement exercises, or in some cases, to present them at the annual employer-employee banquet if it is held near the end of the school year.

Summary of Year's Work

Although it is not a part of the standards set up by the State Board for Vocational Education for industrial cooperative programs, coordinators should submit a written summary of their year's work to the school administration and advisory committee. Such a practice is indeed business-like and school superintendents and advisory committee members have commented very favorably upon it. Frequently these persons, especially school administrators, are not fully aware of all the details of the coordinator's work during the year, and a report of this type is a splendid means of maintaining their cooperation and interest in the development of the cooperative program. Suggested data which may be included in such a report are:

1. Cumulative enrollment: boys; girls.
2. Fields of training.
3. Total student hours on job; in class.
4. Total wages received.
5. Student training costs.
6. Training certificates awarded.
7. Contacts with employers, parents, management and labor groups.
8. New library and classroom facilities obtained.
9. Prospects for next year's class; new fields of training.
10. Trade Extension promotional activities.

Check Sheet for Closing Out School Year

Too often when a coordinator fails to return to his work at the beginning of a new school year, the succeeding coordinator--usually a new man in the school system--finds insufficient records and general information about the program he is taking over. Situations like this are inexcusable and result in considerable loss of valuable time to the new coordinator who is obliged to spend several days in seeking out sufficient information about the status of the program to enable him to proceed in organizing his classes. Although a coordinator may fully expect to return to his present position the following term, he should make certain that complete and accurate records pertaining to his program are on file. A suggested check sheet for closing out each school year is shown below. A copy should be left with the high school principal before the coordinator leaves on his summer vacation.

CHECK SHEET for closing out Industrial Cooperative Classes

Items	Where Filed
Advisory Committee Minutes	
Class rolls (register)	
Correspondence	
Inventory of reference books	
Inventory of classroom equipment	
Inventory of courses of study	
Memoranda and bulletins	
Permanent Record Cards	
Prospective student list	
Prospective employer list	
Student applications (new)	
Plans for coming year	
Students' individual folders	
Adult Education records

APPENDIX

108/109

LAWS AFFECTING COOPERATIVE TRAINING

The employment of high school students in industrial cooperative programs must conform to State and Federal laws regulating the employment of minors. The State Board for Vocational Education is insistent in maintaining the standard of part-time programs in this respect as high as, or even higher than, those established by the State and Federal Governments.

It is incumbent upon each coordinator to familiarize himself with all such laws and to check each student and training station in his program to see that no irregularities occur.

I. TEXAS CHILD LABOR LAWS

Texas labor laws prohibit the employment of youth under 17 years of age in mines, quarries, and places where explosives are used. They also regulate the employment of youth under the age of 15.

Since part-time programs in Texas do not offer training in the above occupations, nor accept students under 15 years of age, these provisions are automatically complied with.

No girl can work more than 9 hours a day, nor more than 54 hours a week in any type of occupation.

II. CHILD LABOR STANDARDS UNDER FEDERAL LAWS

A 16-year minimum age for school and work programs. Enrollment in part-time classes reimbursed from funds appropriated under the George-Barden Act is limited to workers 16 years of age and over. Under the Fair Labor Standards Act, 16 years is the legal minimum age for work during school hours in any occupation in or about any establishment which produces goods for shipment in interstate commerce. Therefore, the Office of Education and the U. S. Department of Labor agree that a minimum age of 16 years for school and work programs should be observed.

An 18-year minimum age for occupation declared hazardous under the Fair Labor Standards Act. To protect young workers from hazardous employment the Fair Labor Standards Act provides for a minimum age of 18 years in occupations found and declared to be particularly hazardous for minors 16 and 17 years of age. There are to date 17 hazardous-occupations orders which include:

Explosive manufacturing (Order No. 1)
Motor vehicles (Order No. 2)
Coal Mining (Order No. 3)
Logging and sawmilling (Order No. 4)

Power-driven woodworking machines (Order No. 5)
Radioactive substances (Order No. 6)
Power-driven hoisting apparatus (Order No. 7)
Power-driven metal forming, punching, and shearing machines (Order No. 8)
Mining, other than coal (Order No. 9)
Slaughtering and meat packing establishments and rendering plants (Order No. 10)
Bakery machines (Order No. 11)
Paper-products machines (Order No. 12)
Manufacture of brick, tile and kindred products (Order No. 13)
Occupations involved in the operation of circular saws, band saws, and guillotine shears (Order No. 14)
Occupations involved in wrecking, demolition, and ship-breaking operations (Order No. 15)
Occupations involved in roofing operations (Order No. 16)
Occupations in excavation operations (Order No. 17)

The orders that are most likely to have a bearing on school and work programs are Nos. 2, 5, 6, 7, 8, 10, 11, 12. An explanation of each of these orders follows: (The information is taken directly from the Revised Child Labor Bulletin No. 101, U. S. Department of Labor, 1964.)

Motor-Vehicle Occupations (Order No. 2)

The occupations of motor-vehicle driver and helper.

Definitions

The term "motor vehicle" shall mean any automobile, truck, truck-tractor, trailer, semitrailer, motorcycle, or similar vehicle propelled or drawn by mechanical power and designed for use as a means of transportation but shall not include any vehicle operated exclusively on rails.

The term "driver" shall mean any individual who, in the course of his employment, drives a motor vehicle at any time.

The term "helper" shall mean any individual, other than a driver, whose work includes riding on a motor vehicle for the purpose of assisting in transporting or delivering goods, but shall not apply to an individual riding in a passenger-type motor vehicle.

(Effective January 1, 1940; Amended May 16, 1955)

Power-Driven Woodworking Machine Occupations (Order No. 5)

The following occupations involved in the operation of power-driven woodworking machines:

1. The occupation of operating power-driven woodworking machines including supervising or controlling the operation of such machines, feeding material into such machines, and helping the operator to feed material into such machines, but not including the placing of material on a moving chain or in a hopper or slide for automatic feeding.

2. The occupations of setting up, adjusting, repairing, oiling, or cleaning power-driven woodworking machines.

3. The operations of off-bearing from circular saws and from guillotine-action veneer clippers.

Definitions

(1) The term "power driven woodworking machines" shall mean all fixed or portable machines or tools driven by power and used or designed for cutting, shaping, forming, surfacing, nailing, stapling, wire stitching, fastening, or otherwise assembling, pressing, or printing wood or veneer.

(2) The term "off-bearing" shall mean the removal of material or refuse directly from a saw table or from the point of operation. Operations not considered as off-bearing within the intent of this section include: (a) the removal of material or refuse from a circular saw or guillotine-action veneer clipper where the material or refuse has been conveyed away from the saw table or point of operation by a gravity chute or by some mechanical means such as a moving belt or expulsion roller, and (b) the following operations when they do not involve the removal of material or refuse directly from a saw table or from the point of operation: the carrying, moving, or transporting of materials from one machine to another or from one part of a plant to another; the piling, stacking, or arranging of materials for feeding into a machine by another person; and the sorting, typing, bundling, or loading of materials.

Exemptions

Apprentices. -- This order shall not apply to the employment of apprentices in the occupations herein declared particularly hazardous: Provided, that (1) the apprentice is employed in a craft recognized as an apprenticable trade, (2) the work of the apprentice in the occupations herein declared hazardous is incidental to the apprentice training, is intermittent and for short periods of time, and is under the direct and close supervision of a journeyman as a necessary part of such apprentice training, and (3) the apprentice is registered by the Bureau of Apprenticeship and Training of the United States Department of Labor as employed in accordance with the standards established by that Bureau, or is registered by a State agency as employed in accordance

with the standards of the State apprenticeship agency recognized by the Bureau of Apprenticeship and Training, or is employed under a written apprenticeship agreement under conditions which substantially conform to such Federal or State standards as determined by the Secretary of Labor.

Student-learners. -- This order shall not apply to the employment of a student-learner in occupations herein declared particularly hazardous: Provided, however, that such a student-learner is enrolled in a course of study and training in a cooperative vocational training program under a recognized State or local educational authority or in a course of study in a substantially similar program conducted by a private school: Provided, further, that such student-learner be employed under a written agreement which shall provide: (1) that the work of the student-learner in the occupations herein declared hazardous shall be incidental to his training, shall be intermittent and for short periods of time, and shall be under the direct and close supervision of a qualified and experienced person; (2) that safety instruction shall be given by the school and correlated by the employer with on-the-job training; and (3) that a schedule of organized and progressive work processes to be performed on the job shall have been prepared. Such a written agreement shall carry the name of the student-learner, and shall be signed by the employer and the school coordinator or principal. Copies of the agreement shall be kept on file by both the school and the employer. This exemption for the employment of student-learners may be revoked in any individual situation wherein it is found that reasonable precautions have not been observed for the safety of minors employed thereunder.

(Effective August 1, 1941. Amended November 13, 1942; February 18, 1944; July 12, 1944; October 31, 1945; September 27, 1946; November 24, 1951; and September 23, 1958.)

Occupations Involving Exposure to Radioactive Substances and to Ionizing Radiations (Order No. 6)

Any work in any workroom in which (a) radium is stored or used in the manufacture of self-luminous compound; (b) self-luminous compound is made, processed, or packaged; (c) self-luminous compound is stored, used, or worked upon; (d) incandescent mantles are made from fabric and solutions containing thorium salts, or are processed or packaged, (e) other radioactive substances are present in the air in average concentrations exceeding 10 percent of the maximum permissible concentrations in the air recommended for occupational exposure by the National Committee on Radiation Protection, as set forth in Table 3 of National Bureau of Standards Handbook No. 52, "Maximum Permissible Amounts of Radioisotopes in the Human Body and Maximum Permissible Concentrations in Air and Water," issued March 20, 1953.

Any other work which involves exposure to ionizing radiations in excess

of one-tenth the maximum permissible dose recommended by the National Committee on Radiation Protection, as set forth in National Bureau of Standards Handbook No. 59, "Permissible Dose from External Sources of Ionizing Radiation," issued September 24, 1954.

Definitions

As used in this section: the term "self-luminous compound" shall mean any mixture of phosphorescent material and radium, mesothorium, or other radioactive element; the term "workroom" shall include the entire area bounded by walls of solid material and extending from floor to ceiling; the term "ionizing radiations" shall mean alpha and beta particles, electrons, protons, neutrons, gamma, and X-ray and all other radiations which produce ionizations directly or indirectly, but does not include electromagnetic radiations other than gamma and X-ray.

(Effective May 1, 1942. Amended July 9, 1949, and June 23, 1957.)

Power-Driven Hoisting Apparatus Occupations (Order No. 7)

The following occupations involved in the operation of power-driven hoisting apparatus:

1. Work of operating an elevator, crane, derrick, hoist, or high-lift truck, except operating an unattended automatic operation passenger elevator or an electric or air-operated hoist not exceeding 1-ton capacity.

2. Work which involves riding on a manlift or on a freight elevator, except a freight elevator operated by an assigned operator.

3. Work of assisting in the operation of a crane, derrick or hoist performed by crane hookers, crane chasers, hookers-on, riggers, rigger helpers, and like occupations.

Definitions

The term "elevator" shall mean any power-driven hoisting or lowering mechanism equipped with a car or platform which moves in guides in a substantially vertical direction. The term shall include both passenger and freight elevators (including portable elevators or tiering machines), but shall not include dumbwaiters.

The term "crane" shall mean a power-driven machine for lifting and lowering a load and moving it horizontally, in which the hoisting mechanism is an integral part of the machine. The term shall include all types of crane, such

as cantilever gantry, crawler, gantry, hammer-head, ingot-pouring, jib, locomotive, motor truck, overhead traveling, pillar jib, pintle, portal semi-gantry, semiportal, storage bridge, tower, walking jib, and wall cranes.

The term "derrick" shall mean a power-driven apparatus consisting of a mast or equivalent members held at the top by guys or braces, with or without a boom, for use with a hoisting mechanism and operating ropes. The term shall include all types of derricks, such as A-frame, breast, Chicago boom, gin-pole, guy, and stiff-leg derricks.

The term "hoist" shall mean a power-driven apparatus for raising or lowering a load by the application of a pulling force that does not include a car or platform running in guides. The term shall include all types of hoists, such as base-mounted electric, clevis suspension, hook suspension, monorail, overhead electric, simple drum, and trolley suspension hoists.

The term "high-lift truck" shall mean a power-driven industrial type of truck used for lateral transportation that is equipped with a power-operated lifting device usually in the form of a fork or platform capable of tiering loaded pallets or skids one above the other. Instead of a fork or platform, the lifting device may consist of a ram, scoop, shovel, crane, revolving fork, or other attachments for handling specific loads. The term shall mean and include high-life trucks known under such names as fork lifts, fork trucks, fork-lift trucks, tiering trucks, or stacking trucks, but shall not mean low-lift trucks or low-lift platform trucks that are designed for the transportation of, but not the tiering of, material.

The term "manlift" shall mean a device intended for the conveyance of persons which consists of platforms or brackets mounted on, or attached to, an endless belt, cable, chain or similar method of suspension; such belt, cable, or chain operating in a substantially vertical direction and being supported by and driven through pulleys, sheaves or sprockets at the top or bottom.

(Effective September 1, 1946. Amended September 30, 1950; and September 1, 1955.)

Power-Driven Metal Forming, Punching, and Shearing Machine Occupations (Order No. 8)

The occupations of operator of or helper on the following power-driven metal forming, punching, and shearing machines:

1. All rolling machines, such as beading, straightening, corrugating, flanging, or bending rolls; and hot or cold rolling mills.

2. All pressing or punching machines, such as punch presses except those provided with full automatic feed and ejection and with a fixed barrier guard to prevent the hands or fingers of the operator from entering the area between the dies; power presses; and plate punches.

3. All bending machines, such as apron brakes and press brakes.

4. All hammering machines, such as drop hammers and power hammers.

5. All shearing machines, such as guillotine or squaring shears: alligator shears; and rotary shears.

Definitions

The term "operator" shall mean one who operates a forming, punching, or shearing machine by performing such functions as setting up the machine, starting and stopping it, placing the work in the machine and removing the finished work from the machine, and performing other related functions in connection with its operation.

The term "helper" shall mean one who assists in the operation of a forming, punching, or shearing machine by helping place the work in or remove it from the machine.

The term "forming, punching, and shearing machines", shall mean power-driven metal-working machines, other than machine tools, which change the shape of or cut metal by means of tools, such as dies, rolls, or knives which are mounted on rams, plungers, or other moving parts. Types of forming, punching, and shearing machines enumerated in this section are the machines to which the designation is by custom applied.

Exemptions

Apprentices. -- This order shall not apply to the employment of apprentices in the occupations herein declared particularly hazardous: Provided, that (1) the apprentice is employed in a craft recognized as an apprenticeable trade, (2) the work of the apprentice in the occupations herein declared hazardous is incidental to the apprentice training, is intermittent and for short periods of time, and is under the direct and close supervision of a journeyman as a necessary part of such apprentice training, and (3) the apprentice is registered by the Bureau of Apprenticeship of the United States Department of Labor, is employed in accordance with the standards established by that Bureau, or is registered by a State agency as employed in accordance with the standards of the State apprenticeship agency recognized by the Bureau of Apprenticeship, or is employed under a written apprenticeship agreement

under conditions which substantially conform to such Federal or State standards as determined by the Secretary of Labor.

Student-learners. -- This order shall not apply to the employment of a student-learner in occupations herein declared particularly hazardous: Provided, however, that such a student-learner is enrolled in a course of study and training in a cooperative vocational training program under a recognized State or local educational authority or in a course of study in a substantially similar program conducted by a private school: Provided, further, that such student-learner be employed under a written agreement which shall provide: (1) that the work of the student-learner in the occupations herein declared hazardous shall be incidental to his training, shall be intermittent and for short periods of time, and shall be under the direct and close supervision of a qualified and experienced person; (2) that safety instruction shall be given by the school and correlated by the employer with on-the-job training; and (3) that a schedule of organized and progressive work processes to be performed on the job shall have been prepared. Such a written agreement shall carry the name of the student-learner, and shall be signed by the employer and the school coordinator or principal. Copies of the agreement shall be kept on file by both the school and the employer. This exemption for the employment of student-learners may be revoked in any individual situation wherein it is found that reasonable precautions have not been observed for the safety of minors employed thereunder.

(Effective October 30, 1950. Amended September 23, 1958.)

Slaughtering, Meat Packing and Rendering Plant Occupations (Order No. 10)

The following occupations in or about slaughtering and meat packing establishments and rendering plants:

(1) All occupations on the killing floor, in curing cellars, and in hide cellars, except the work of messengers, runners, hand-truckers, and similar occupations which require entering such workrooms or workplaces infrequently and for short periods of time.

(2) All occupations involved in the recovering of lard and oils, except for operation of a lard-roll machine and occupations in the packaging and shipment of such products.

(3) All occupations involved in tankage or inedible rendering of dead animals, animal offal, animal fats, scrap meats, blood, and bones into stock feeds, tallow inedible greases, fertilizer ingredients and the like.

(4) All occupations involved in the operation of feeding of the following power-driven meat-processing machines, including the occupation of setting-up, adjusting, repairing, oiling, or cleaning such machines; meat patty forming machines, meat and bone cutting saws, knives, (except bacon-slicing machines) head splitters, and guillotine cutters; snout pullers and jaw pullers; skinning machines; horizontal rotary washing machines; casing-cleaning machines such as crushing, stripping, and finishing machines; grinding, mixing, chopping, and hashing machines; and presses (except belly-rolling machines).

(5) All boning occupations.

(6) All occupations that involve the pushing or dropping of any suspended carcass, half carcass, or quarter carcass.

(7) All occupations that involve the handlifting or handcarrying of any beef, pork, or horse carcass, half carcass of the same, or any beef or horse quarter carcass.

Definitions

The term "slaughtering and meat packing establishments" shall mean establishments in or about which cattle, calves, hogs, sheep, lambs, goats, or horses are slaughtered and/or subsequently processed. The term shall include establishments which manufacture or process meat products from such animals, establishments which manufacture sausage casings from such animals, and establishments which sell the meat from such animals at wholesale.

The term "rendering plants" shall mean plants engaged in the rendering of dead animals, animal offal, animal fats, scrap meats, blood and bones into stock feeds, tallow inedible greases fertilizer ingredients, and the like.

The term "killing floor" shall mean plants engaged in the rendering where cattle, calves, hogs, sheep, lambs, goats, or horses are shackled and killed and the carcasses are dressed prior to chilling.

The term "curing cellar" shall include that workroom or workplace which is primarily devoted to the preservation and flavoring of meat by curing materials. It does not include that workroom or workplace where meats are smoked.

The term "hide cellar" shall include that workroom or workplace where hides are graded, trimmed, salted and otherwise cured.

The term "all boning occupations" shall mean the removal of bones from meat cuts. It shall not include work that involves cutting, scraping, or trimming meat from cuts containing bones.

Exceptions

This section shall not apply to the following:

Any department of a slaughtering and meat packing establishment engaged solely in the killing and/or processing of poultry, rabbits, or small game provided such department is physically separated from the "killing floor" as such term is defined above.

(Effective May 8, 1952, amended November 15, 1960, December 27, 1962, and December 30, 1963.)

Power-Driven Bakery Machine Occupations (Order No. 11)

The following occupations involved in the operation of power-driven bakery machines:

(1) The occupation of operating, assisting to operate, or cleaning any horizontal or vertical dough mixer; batter mixer; break dividing, rounding, or molding machine; dough brake; dough sheeter; combination bread slicing and wrapping machine; or cake cutting band saw.

(2) The occupation of setting up or adjusting a cooky or cracker machine.

(Effective July 21, 1952.)

Power-Driven Paper-Products Machines (Order No. 12)

The occupations of operating or assisting to operate any of the following power-driven paper-products machines:

(1) Arm-type wire stitcher or stapler, circular or band saw, corner cutter or mitering machine, corrugating and single- or double-facing machine, envelope die-cutting press, guillotine paper cutter or shear, horizontal bar scorer, laminating or combining machine, sheeting machine, scrap-paper baler, or vertical slotter.

(2) Platen die-cutting press, platen printing press, or punch press which involves hand feeding of the machine.

Definitions

The term "operating or assisting to operate" shall mean all work which involves starting or stopping the machine, placing materials into or removing them from the machine, setting up or cleaning the machine, or any other work directly involved in operating the machine.

The term "paper-products machine" shall mean power-driven machines used in the remanufacture or conversion of paper or pulp into a finished product. The term is understood to apply to such machines whether they are used in establishments that manufacture converted paper or pulp products, or in any other type of manufacturing or nonmanufacturing establishment.

Exemptions

Apprentices. -- This order shall not apply to the employment of apprentices in the occupations herein declared particularly hazardous; Provided, that (1) the apprentice is employed in a craft recognized as an apprenticeable trade, (2) the work of the apprentice in the occupations herein declared hazardous is incidental to the apprentice training, is intermittent and for short periods of time, and is under the direct and close supervision of a journeyman as a necessary part of such apprentice training, and (3) the apprentice is registered by the Bureau of Apprenticeship of the United States Department of Labor as employed in accordance with the standards established by that Bureau, or is registered by a State agency as employed in accordance with the standards of the State apprenticeship agency recognized by the Bureau of Apprenticeship, or is employed under a written apprenticeship agreement under conditions which substantially conform to such Federal or State standards as determined by the Secretary of Labor.

Student-learner. -- This order shall not apply to the employment of a student-learner in occupations herein declared particularly hazardous: Provided, however, that such a student-learner is enrolled in a course of study and training in a cooperative vocational training program under a recognized State or local educational authority or in a course of study in a substantially similar program conducted by a private school: Provided, further, that such student-learner be employed under a written agreement which shall provide: (1) that the work of the student-learner in the occupations herein declared hazardous shall be incidental to his training, shall be intermittent and for short periods of time, and shall be under the direct and close supervision of a qualified and experienced person; (2) that safety instruction shall be given by the school and correlated by the employer with on-the-job training; and (3) that a schedule of organized and progressive work processes to be performed on the job shall have been prepared. Such a written agreement shall carry the name of the student-learner, and shall be signed by the employer and the school coordinator

or principal. Copies of the agreement shall be kept on file by both the school and the employer. This exemption for the employment of student-learners may be revoked in any individual situation wherein it is found that reasonable precautions have not been observed for the safety of minors employed thereunder.

(Effective September 11, 1954. Amended September 23, 1958.)

An 18-year minimum age for girls and a 16-year minimum for boys on Government contracts. Under the Public Contracts Act, contractors manufacturing or furnishing goods and supplies for the Federal Government in an amount exceeding $10,000 may not employ a girl under 18 or a boy under 16 years of age on such work.

Information on Federal Laws

Further information on child-labor standards under the Federal laws may be obtained from the nearest office of the Wage and Hour and Public Contracts Divisions, U. S. Department of Labor. School authorities may request the advice of the Wage and Hour and Public Contracts Divisions as to compliance with the Federal law with respect to occupations in which they are placing young people. The Regional Office of the Wage and Hour Public Contracts Divisions, U. S. Department of Labor, is located at:

Regional Office
Room 222
1114 Commerce Street
Dallas 2, Texas 75202

Age and Employment Certificates

Practically all State child-labor laws require employment or age certificates. State employment or age certificates are accepted as proof of age under the child-labor provisions of the Fair Labor Standards Act. Officials should see that age certificates are obtained for minors 16 and 17 years of age in general employment and minors 18 and 19 years of age in occupations declared hazardous. Federal Certificates of Age are issued by the U. S. Department of Labor, Wage and Hour and Public Contracts Divisions, Room 222, 1114 Commerce Street, Dallas, Texas, 75202, or by the local offices of the Texas Employment Commission in your area.

Supervision and Safety

Supervision should be such that students are not only taught how to work but

also how to work safely. In order to insure the protection of minors from accidents, coordinators and/or supervisors may wish to check to see that establishments in which children are placed have an active accident prevention program and that they are covered by workmen's compensation insurance.

Child Labor Standards Under State Laws

State child-labor laws generally regulate the employment of more young people than do Federal laws because they are not limited to establishments producing goods for interstate shipment. State laws may differ from Federal laws in their minimum age and hazardous-occupations regulations and they are often wider in scope than the Federal law, as, for example, in their regulation of maximum hours and night work. When establishments are covered by both Federal and State laws the higher standard prevails. Information on State child-labor standards may be obtained from State Labor Departments.

III. WAGES AND HOURS PROVISIONS OF THE FAIR LABOR STANDARDS ACT

The Federal Wage and Hour Law applies to all those who are engaged in interstate commerce, who produce goods for interstate commerce or perform work related to the production of goods for interstate commerce. Even though workers are covered by the Act, they may be subject to exemption from some of its provisions. Unless an employee is subject to some exemption, he must be paid at least $1.25 an hour, must get overtime after 40 hours in the week at not less than time and one-half his regular rate.

The Act also applies to employees (including student learners) who are not themselves engaged in or producing goods for commerce but who are employed in certain large enterprises engaged in commerce or in the production of goods for commerce. The Fair Labor Standards Act establishes a minimum wage, child labor, and maximum hours and overtime standards for employees subject to its provisions. Effective September 3, 1964, the minimum wage for employees subject to this enterprise coverage was $1.15 an hour with overtime applicable after 42 hours in the workweek. Effective September 3, 1965, this minimum wage will be increased to $1.25 an hour with overtime due after 40 hours in the workweek, which will bring the standards of individual and enterprise coverage to an equal plane.

The Law provides for the employment of certain workers at rates lower than the statutory minimum under the terms of special certificates. Individual certificates are granted for students working part-time in employment related to courses they are receiving in school, when such employment has been arranged by the Coordinator of Distributive Education in the school the student is attending. Many students are placed in employment not subject to the requirements of the Law in which case certificates are not necessary. One type of such employment is that in certain retail and service establishments.

Terms and Conditions Under Which Student Learner Certificates are Issued

No certificate is issued for less than 75 per cent of the applicable minimum wage.

Hours of employment plus hours of schooling should not exceed 40 in a week except under extraordinary circumstances. Generally a certificate does not cover a period longer than one school year.

No certificate may be issued for a student under 16 years of age, and 18 years is the minimum age for employment in an occupation declared to be hazardous by the Secretary of Labor. There are exceptions for student learners in some of these hazardous occupations, provided stipulated conditions are met.

An application must be signed by the employer, the coordinator and the student, each of whom may keep a copy. The original must be sent to the Regional Office of the Wage and Hour Division for consideration and determination as to whether the certificate may be granted. Certificates are issued by that office.

Certificates are not issued retroactively, but temporary authorization to pay a subminimum rate becomes effective the date on which the properly executed application is submitted for consideration.

Exemptions to Both Wages and Hours Provisions. -- Part-time students are not covered by the wages and hours provisions if they are employed in:

1. Small retail and service establishments exempt from the provisions of enterprise coverage.

2. Weekly or semi-weekly newspapers whose circulation is less than 3000.

3. Preparing or processing agricultural commodities or dairy products for market.

IV. STUDENT-LEARNER CERTIFICATES

As stated above, industrial cooperative students, employed in places of business engaging in interstate commerce, may be paid an hourly wage less than the minimum prescribed for the occupation provided certain requirements are met. Regulations on such employment are explained in the following Federal bulletin:

(Rev. 10/63)

U. S. DEPARTMENT OF LABOR
Wage and Hour and Public Contracts Divisions

INFORMATION GUIDE AND INSTRUCTIONS FOR COMPLETING APPLICATION FOR STUDENT-LEARNER CERTIFICATES

Under regulations established pursuant to both the Fair Labor Standards Act and the Walsh-Healey Public Contracts Act student-learners may be employed at wages below the minimum wages established under those acts in accordance with certificates issued by the Wage and Hour and Public Contracts Divisions of the U. S. Department of Labor. The employment of student-learners at special minimum wages is subject to Regulations, Part 520, issued under authority of section 14 of the Fair Labor Standards Act. Section 50-201.1102 of the general regulations under the Walsh-Healey Public Contracts Act recognizes the standards and procedures of Regulations, Part 520, as applicable to the issuance of certificates permitting employment of student-learners at special minimum wages in the performance of Government contracts.

1. COVERAGE: The Fair Labor Standards Act applies to employees (including student-learners) engaged in interstate commerce or in the production of goods for interstate commerce, including any closely related process or occupation directly essential to such production, unless specifically exempt by some provision of the act. The act also applies to employees (including student-learners) who are not themselves engaged in or producing goods for commerce but who are employed in certain large enterprises engaged in commerce or in the production of goods for commerce. Popularly known as the Federal Wage and Hour Law, this act establishes minimum wage, child-labor, and maximum hours and overtime standards for employment subject to its provisions.

The Walsh-Healey Public Contracts Act applies in general to all contracts entered into by the Government for the manufacture or furnishing of materials, supplies, articles or equipment in any amount in excess of $10,000. This act requires the payment to employees engaged in the performance of such contracts of not less than the minimum wage determined by the Secretary of Labor to be prevailing for the industry. In addition, the Public Contracts Act contains special provisions for safety and health standards, restrictions against the use of child labor and convict labor, and special provisions for the payment of overtime for work subject to the act.

Special situations which may arise under these two acts are explained in Section 11 of this guide. The Wage and Hour and Public Contracts Divisions will make available upon request bulletins on the coverage of these acts. If in doubt as to whether either or both of these acts apply to a particular type of employment, a letter setting forth the facts of your situation should be sent to the regional office of these Divisions which serves your area.

2. WHO IS A STUDENT-LEARNER: As defined in the regulation, a student-learner is a student who is receiving instruction in an accredited school, college or university, and who is employed on a part-time basis pursuant to a bona fide vocational training program administered by his school. A bona fide vocational training program is one authorized and approved by a State board of vocational education or other recognized educational body. Such programs must provide for part-time employment training supplemented by and integrated with a definitely organized plan of instruction designed to teach technical knowledge and related industrial information which is given as a regular part of the student-learner's course of study in the educational institution he attends. Such programs may be in retail and service occupations as well as in trade and industrial skills.

3. WHO MAY FILE: Whenever it is believed necessary in order to prevent curtailment of employment opportunities, application may be made for a certificate authorizing an employer to pay student-learners special minimum wages below the applicable statutory (or wage order) minimum wage under the Fair Labor Standards Act or below a minimum wage determination under the Walsh-Healey Public Contracts Act. A separate application on official forms furnished for the purpose must be filed by the employer for each such student-learner. Parts of this application are best completed by a school official, other parts by the employer. The appropriate school official, the employer, and the student-learner must sign the application. Before a certificate can be issued, the conditions specified in Section 520.5 of the regulation must be met.

4. WHERE TO FILE: Applications must be made on official forms supplied by the Divisions. The original of the completed application must be filed with the regional office of these Divisions serving your area. A copy must be retained in the employer's files. Additional copies may be made available to school officials and to the student-learner.

5. WHEN TO FILE: Applications should be filed 15 to 30 days in advance of the date the student-learner begins his employment so that the Divisions can take action on the application before employment begins. CERTIFICATES CANNOT BE ISSUED RETROACTIVELY.

Where the student's employment opportunity might be lost by delay in obtaining a certificate, Section 520.6 (c) (2) of the regulation establishes a procedure for a temporary authorization. A description of this procedure

appears at the top of the fact of the application.

6. AGE AND PROOF OF AGE: Minors under 16 years of age are not eligible for student-learner certificates. Furthermore, in occupations declared to the hazardous by the Secretary of Labor, the student-learner must be at least 18 years of age. (Hazardous Occupations Orders Nos. 5, 8, 10, 12, 14, 16, and 17, permit student-learner employment at 16 and 17 years of age under certain specified conditions.) For information concerning child-labor provisions of the Fair Labor Standards Act, see Child-Labor Bulletin No. 101 which is obtainable from the nearest regional office of the Wage and Hour and Public Contracts Divisions.

For employment subject to the Walsh-Healey Public Contracts Act, male employees must be at least 16 years old and female employees must be at least 18 years old.

In addition to entering the student-learner's birth date in item 3 of the application, the employer should obtain and keep on file an employment or age certificate showing the student-learner to be at least the minimum age for the occupation in which he is employed. In 45 States, the District of Columbia, and Puerto Rico, State employment and age certificates are accepted as proof of age under the child-labor provisions of the Fair Labor Standards Act. (Such certificates also provide assurance that the employment is in compliance with the requirements of the State child-labor law.) In four States, Idaho, Mississippi, South Carolina, and Texas, where State age and employment certificates are not available, Federal certificates of age may be obtained within the State from the Wage and Hour and Public Contracts Divisions. Special arrangements have been made in Guam and Alaska. For information concerning proof of age in these areas consult the nearest office of the Wage and Hour and Public Contracts Divisions.

7. PERIOD OF EMPLOYMENT TRAINING AT SPECIAL MINIMUM WAGES: A certificate may be issued only for that portion of the employment training period for which special minimum wages below the minimum wages under the Fair Labor Standards Act or the Walsh-Healey Public Contracts Act are necessary. This period may not exceed the length of one school year unless a longer period is found to be justified by extraordinary circumstances which must be explained in detail at the time of application. No certificate shall authorize employment training beyond the date of graduation of the student-learner.

Employment training at special minimum wage rates during the summer vacation period will not generally be authorized. However, in exceptional cases summer employment training may be authorized when it is an integral part of the vocational training program. Requests for summer vacation employment must be accompanied by a statement explaining the extraordinary circumstances justifying this employment, including the number of

hours per week for which special minimum wages are requested.

In item 16 of the application, show only the number of weeks of employment during which special minimum wages will be paid. The beginning and ending dates of employment shown in items 8 and 9 should coincide with this period.

8. HOURS OF WORK AND SCHOOL INSTRUCTION: The term "hours of school instruction" applies to all hours spent by the student-learner in actual classes of school instruction and does not include school hours spent in study hall, homeroom, and activity periods for which no academic credit is given.

The combined hours of school instruction and employment training authorized under a certificate may not exceed 40 hours a week unless justified by extraordinary circumstances. Such extraordinary circumstances must be explained in detail in a statement submitted with the application. Hours at special minimum wages in addition to those authorized on a certificate may be worked provided that the total hours worked do not exceed:

(a) 8 hours on any school day when school is not in session;

(b) 40 hours in any week during the school term when school is not in session for the entire week.

The employer shall note in his records the number of such additional hours and that they were worked because school was not in session. (Section 520.6 (d) and (c)). A STUDENT-LEARNER MAY NOT BE EMPLOYED IN ANY WEEK AT SPECIAL MINIMUM WAGE RATES FOR HOURS IN ADDITION TO THOSE AUTHORIZED IN THE PARAGRAPH ABOVE.

In item 17 of the application, show only those hours of employment during a week for which you intend to pay wages below the applicable minimum wage under the Fair Labor Standards Act or below the wage determination minimum applicable under the Public Contracts Act.

9. WAGES RATES: The hourly wage rate shall be not less than 75 percent of the applicable statutory minimum wage under the Fair Labor Standards Act. It is suggested that consideration be given to the payment of a progressive wage schedule, particularly if a full school year of employment training at special minimum wages is requested. If a progressive wage schedule is proposed, the special minimum starting rate must be not less than 75 percent of the applicable statutory minimum. In item 18, show only those wages which are below the applicable minimum wage under the Fair Labor Standards Act. (This paragraph also applies to work subject to Public Contracts Act wage determinations. See section 11 on the following page.)

10. CERTIFICATES: The original of the student-learner certificate will be mailed directly to the employer. Two copies will be mailed to the appropriate school official, one to be retained for his records and the other to be presented to the student-learner. APPLICATIONS WHICH DO NOT CONTAIN ALL REQUESTED INFORMATION MAY BE RETURNED FOR COMPLETION BEFORE ACTION IS TAKEN. Student-learner certificates can be issued with a minimum of delay where the application provides the details requested. For additional information or application forms, communicate with the regional office of these Divisions which serves your area.

11. SPECIAL SITUATIONS UNDER THE WALSH-HEALEY PUBLIC CONTRACTS ACT: The general provisions of this act are explained in the introduction to this guide. The general regulations under the Public Contracts Act permit the employment of student-learners at wages below prevailing minimum wage determinations made under this act in accordance with the same standards and procedures as are prescribed for their employment at wages below the minimum wage applicable under the Fair Labor Standards Act. The provisions of Regulations, Part 520 and the instructions in this guide apply to student-learners employed in the performance of Government contracts subject to the Public Contracts Act. Special situations may arise where the employment is subject to differing rates of pay under the two acts or is subject only to the Public Contracts Act.

An employer who holds or who obtains a student-learner certificate issued in order to prevent curtailment of opportunities for employment under the Fair Labor Standards Act may employ the named student-learner in the performance of a Government contract subject to the Public Contracts Act at the authorized special minimum wage and in accordance with the terms specified in that certificate.

An employer may not need a student-learner certificate in order to prevent the curtailment of employment opportunities under the Fair Labor Standards Act or his employees may not be subject to that act. In either case, an employer performing a Government contracts subject to a minimum wage determination under the Public Contracts Act may, upon proper application, be issued a certificate authorizing a special minimum wage rate not less than 75 percent of the minimum wage determination applicable to the contract being performed. Employment under such certificates is subject to the standards and procedures of Regulations, Part 520.

12. COMPLIANCE: Certificates may not be issued if there are serious outstanding violations of a student-learner certificate previously issued to the employer or if there are serious violations of other provisions of the Fair Labor Standards Act by the employer which provide reasonable grounds to conclude that the terms of the certificate would not be complied with, if issued.

Moreover, no certificate permitting a wage lower than the statutory minimum under the Fair Labor Standards Act or a Public Contracts Act Minimum wage determination will excuse non-compliance with the child-labor, overtime, or other provisions of these acts or the regulations issued thereunder.

A certificate may be withdrawn if it is no longer necessary to prevent curtailment of opportunities for employment or if the employer fails to comply with the limitations in the certificate or otherwise violates the act.

U. S. DEPARTMENT OF LABOR
Wage and Hour and Public Contracts Divisions

APPLICATION FOR A CERTIFICATE TO EMPLOY A STUDENT-LEARNER

The certification of the appropriate school official on the reverse side of this application shall constitute a temporary authorization for the employment of the named student-learner at less than the statutory minimum wage applicable under Section 6 of the Fair Labor Standards Act of 1938, as amended, or at wages below the applicable Walsh-Healey Public Contracts Act minimum wage determination, effective from the date this application is forwarded to the Divisions until a student-learner certificate is issued or denied by the Administrator or his authorized representative, *provided* the conditions specified in Section 520.6(c)(2) of the Student-learner Regulation (29 CFR 520) are satisfied.

PLEASE READ CAREFULLY THE INSTRUCTIONS FOR COMPLETING THIS FORM
PRINT OR TYPE ALL ANSWERS

1. Name and address of establishment making application: Advance Beauty & Barber Supply Random Road Progress, Oklahoma	3. Name and address of student-learner: John Daniels 317 N. Lee Progress, Oklahoma Date of Birth: May 1, 1947
2. Type of business and products manufactured, sold, or services rendered: Wholesale beauty and barber supplies	4. Name and address of school in which student-learner is enrolled: Progress High School Third Street Progress, Oklahoma

Information on school instruction:

5. Number of weeks in school year	36	11. Are Smith-Hughes Act or George-Barden Act funds being used for this program? (Yes or No)	Yes
6. Total hours of school instruction per week	15	12. Was this program authorized by the State board for vocational education?	Yes
7. Number of such hours *directly* related to employment training	5	13. If the answer to item 12 is "No" give the name of the recognized local educational body which has approved this vocational training program:	
8. Proposed beginning date of employment	9/14/64		
9. Proposed ending date of employment	5/21/65		
10. Proposed graduation date of student-learner	5/21/65		

14. Outline the school instruction *directly* related to the employment training. (List courses, etc.)

Advertising and display
Store speech
Personnel management
Store organization

Information on employment training at special minimum wages:

15. How is employment training scheduled (weekly, alternate weeks, etc.)?

Every day weekly

16. Number of weeks of employment training at special minimum wage: 36

17. Number of hours of employment training a week: 25

18. Special minimum wage(s) to be paid student-learner (if a progressive wage scale is proposed, enter each rate and specify the period during which it will be paid):

94 cents per hour

(75 cents per hour until 9/2/64-Retail)
(87 cents per hour on 9/3/64-Retail)

19. Title of Student-learner occupation:

Stock and sales

20. Number of employees in this establishment: 10

21. Number of experienced employees in student-learner's occupation shown in question 19: 4

22. Minimum hourly wage rate of experienced workers in 21: $1.25

23. Is an age or employment certificate on file in this establishment for this student-learner? (If not, see instructions): Yes

24. Is it anticipated that the student-learner will be employed in the performance of a Government contract subject to the Walsh-Healey Public Contracts Act? No

25. Outline training on-the-job (describe briefly the work process in which the student-learner will be trained and list the types of any machines used).

Receives and checks incoming merchandise
Prices and stores merchandise and maintains stock control unit records
Fills and maintains shelves and bins
Fills orders and prepares necessary forms required
Telephone courtesy and customer courtesy

26. Signature of student-learner:

I have read the statements made above and ask that the requested certificate, authorizing my employment training at special minimum wages and under the conditions stated, be granted by the Administrator or his authorized representative.

/s/ John Daniels — 9-1-64
(Signature of Student) — *(Date)*

27. Certification by school official:

I certify that the student named herein will be receiving instruction in an accredited school and will be employed pursuant to a bona fide vocational training program, as defined in section 520.2 of Student-Learner Regulations.

/s/ Richard Roe — 9-1-64
(Signature of School Official) — *(Date)*

Title Coordinator

28. Certification by employer or authorized representative:

I certify, in applying for this special certificate, that all of the foregoing statements are, to the best of my knowledge and belief, true and correct.

The recognition certificates for Training Station and Advisory Committee members can be of use as a public relations medium, a means of publicizing your program and creating good will of the co-operating firm you are using as a training station. Emphasis should be placed on the presentation and followed up with a story in the local newspaper. A suggestion made by coordinators is that it could be a Vocational Industrial Club project to furnish frames for the certificates, string or wire attached and ready to hang on the wall or display in a window upon presentation.

Approval for the use of this certificate should be obtained from your superintendent and principal. The certificates may be obtained from the Engineering Extension Service, Texas A&M University, Box 236 F. E., College Station, Texas.

520.8 Duration of certificates
520.9 Compliance with established standards
520.10 Reconsideration and review
520.11 Amendment to the regulations in this part

AUTHORITY: Sections 520.1 to 520.11 issued under section 14, 52 Stat. 1068, as amended; 29 U.S.C. 214.

SOURCE: Sections 520.1 to 520.11 appear at 18 F.R. 3290, June 10, 1953, except as otherwise noted.

PRIOR AMENDMENTS

1950: 15 F.R. 396, Jan. 25, 1950; 15 F.R. 3189, May 25, 1950.

Section 520.1

Applicability of the regulations contained in this part.

The regulations contained in this part are issued in accordance with section 14 of the Fair Labor Standards Act of 1938, as amended, to provide for the employment under special certificates of student-learners at wages lower than the minimum wage applicable under section 6 of the act. Such certificates shall be subject to the terms and conditions hereinafter set forth.

Section 520.2

Definitions.

As used in the regulations contained in this part:

(a) A "student-learner" is a student who is receiving instruction in an accredited school, college or university and who is employed on a part-time basis, pursuant to a bona fide vocational training program.

(b) A "bona fide vocational training program" is one authorized and approved by a State board of vocational education or other recognized educational body and provides for part-time employment training which may be scheduled for a part of the workday or workweek, for alternating weeks or for other limited periods during the year, supplemented by and integrated with a definitely organized plan of instruction designed to teach technical knowledge and related industrial information given as a regular part of the student-learner's course by an accredited school, college or university.

Section 520.3

Application for a special student-learner certificate.

(a) Whenever the employment of a student-learner at wages lower than the minimum wage applicable under section 6 of the Fair Labor Standards Act of 1938, as amended, is believed necessary to prevent curtailment of opportunities for employment, an application for a special certificate authorizing the employment of such student-learner at subminimum wages shall be filed by the employer with the authorized representative of the Administrator at the appropriate Regional or Territorial Office of the Wage and Hour and Public Contracts Divisions, United States Department of Labor.

CODIFICATION: Paragraph (a) was amended, 20 F.R. 5897, Aug. 13, 1955. Subsequently, "an application" was substituted for "an original and duplicate copy of every application," 23 F.R. 5663, July 26, 1958.

(b) Application must be made on the official form furnished by these Divisions and must be signed by the employer, the appropriate school official and the student-learner. The application must contain all information required by such form, including among other things, a statement clearly outlining the vocational training program and showing, particularly, the processes in which the student-learner will be engaged when in training on the job; a statement clearly outlining the school instruction directly related to the job; the total number of workers employed in the establishment; the number and hourly wage rate of experienced workers employed in the occupation in which the student-learner is to be trained; the hourly wage rate or progressive wage schedule which the employer proposes to pay the student-learner; data regarding the age of the student-learner; the period of employment training at subminimum wages; the number of hours of employment training a week; the number of hours of school instruction a week; and a certification by the appropriate school official that the student named therein will be receiving instruction in an accredited school, college or university and will be employed pursuant to a bona fide vocational training program, as defined in section 520.2(b).

Section 520.4

Procedure for action upon application.

(a) Upon receipt of an application for the employment of a student-learner, the Administrator or his authorized representative shall issue a special certificate or deny the application. To the extent he deems appropriate, the Administrator or his authorized representative may provide an opportunity to other interested

persons to present data and views on the application prior to granting or denying a special student-learner certificate.

[Paragraph (a) amended, 24 F.R. 204, Jan. 8, 1959]

(b) If a special certificate is issued it shall be mailed to the employer. If a special certificate is denied, notice of such denial shall be mailed to the employer and such denial shall be without prejudice to any subsequent application, except under the circumstances referred to in section 520.6(c)(2)(iii). Two copies of the certificate or notice of denial shall be mailed to the appropriate school official, one of which shall be retained for his records and the other shall be presented to the student-learner.

Section 520.5

Conditions governing issuance of special student-learner certificates.

The following conditions must be satisfied before a special certificate may be issued authorizing the employment of a student-learner at subminimum wages:

(a) Any training program under which the student-learner will be employed must be a bona fide vocational training program as defined in section 520.2;

(b) The employment of the student-learner at subminimum wages authorized by the special certificate must be necessary to prevent curtailment of opportunities for employment;

(c) The student-learner must be at least 16 years of age (or older as may be required pursuant to paragraph (d) of this section);

(d) The student-learner must be at least 18 years of age if he is to be employed in any activity prohibited by virtue of a hazardous occupation order of the Secretary of Labor. (See 29 CFR Part 4, Subpart E, but note the specific exemptions for student-learners in several of the orders.)

[Paragraph (d) amended, 26 F.R. 8009, Aug. 26, 1961]

(e) The occupation for which the student-learner is receiving preparatory training must require a sufficient degree of skill to necessitate a substantial learning period;

(f) The training must not be for the purpose of acquiring manual dexterity and high production speed in repetitive operations;

(g) The employment of a student-learner must not have the effect of displacing a worker employed in the establishment;

(h) The employment of the student-learners at subminimum wages must not tend to impair or depress the wage rates or working standards established for experienced workers for work of a like or comparable character;

(i) The occupational needs of the community or industry warrant the training of student-learners;

(j) There are no serious outstanding violations of the provisions of a student-learner certificate previously issued to the employer, or serious violations of any other provisions of the Fair Labor Standards Act of 1938, as amended, by the employer which provide reasonable grounds to conclude that the terms of the certificate would not be complied with, if issued;

[Paragraph (j) amended, 21 F.R. 1349, Mar. 1, 1956]

(k) The issuance of such a certificate would not tend to prevent the development of apprenticeship in accordance with the regulations applicable thereto (Part 521 of this chapter) or would not impair established apprenticeship standards in the occupation or industry involved.

(l) The number of student-learners to be employed in one establishment must not be more than a small proportion of its working force.

Section 520.6

Terms and conditions of employment under special student-learner certificates.

(a) The special student-learner certificate, if issued, shall specify, among other things, (1) the name of the student-learner, (2) the name and address of the employer, (3) the name of the school which provides the related school instruction, (4) the occupation in which the student is to be trained, (5) the maximum number of hours of employment training in any one week at a specified subminimum wage rate or rates, and (6) the effective and expiration dates of the certificate.

(b) The special minimum wage rate shall be not less than 75 per centum of the applicable minimum under section 6 of the Act.

(c) (1) No special student-learner certificate may be issued retroactively.

(2) The certification by the appropriate school official on an application for a special student-learner certificate authorizing the employment of a student-learner at subminimum wages (see section 520.3(b)) shall constitute a temporary authorization for the employment of a student-learner at less than the statutory minimum wage, effective from the date such application is forwarded to the Divisions in conformance with section 520.3, until a special student-learner certificate is issued or denied by the Administrator or his authorized representative: *Provided*, That the following conditions are satisfied: (i) The application must be properly executed in conformance with section 520.3; (ii) the employment training must conform with the provisions of sections 520.5 (a), (c), (d), and (g), and paragraphs (b) and (d) of this section; and (iii) the occupation must not be one for which a student-learner application was previously submitted by the employer, and a special certificate was denied by the Administrator or his authorized representative.

(d) (1) The number of hours of employment training each week at subminimum wages pursuant to a certificate, when added to the hours of school instruction, shall not exceed 40 hours, except that authorization may be granted by the Administrator or his authorized representative for a greater number of hours if found to be justified by extraordinary circumstances.

(2) When school is not in session on any school day, the student-learner may work a number of hours in addition to the weekly hours of employment training authorized by the certificate: *Provided, however*, That the total hours worked shall not exceed 8 hours on any such day. A notation shall be made in the employer's records to the effect that school not being in session was the reason additional hours were worked on such day.

(3) During the school term when school is not in session for the entire week, the student-learner may work at his employment training a number of hours in the week in addition to those authorized by the certificate: *Provided, however*, That the total hours shall not exceed 40 hours in any such week. A notation shall be made in the employer's records to the effect that school not being in session was the reason additional hours were worked in such week.

(e) A special student-learner certificate shall not constitute authorization to pay a subminimum wage rate to a student-learner in any week in which he is employed for a number of hours in addition to the number authorized in the certificate, except as provided in paragraphs (d) (1), (2), and (3) of this section.

CODIFICATION: In § 520.6, paragraph (b) was amended, 26 F.R. 8009, Aug. 26, 1961, and paragraphs (f) and (g) were revoked, 22 F.R. 5683, July 18, 1957.

Section 520.7

Employment records to be kept.

In addition to any other records required under the record-keeping regulations (Part 516 of this chapter) the employer shall keep the following records specifically relating to student-learners employed at subminimum wage rates:

(a) Any worker employed as a student-learner shall be identified as such on the payroll records, with each student-learner's occupation and rate of pay being shown;

(b) The employer's copy of the application, which is serving as a temporary authorization under section 520.6(c) (2), must be available at all times for inspection for a period of 3 years from the last date of employment of the student-learner;

(c) Notations should be made in the employer's records when additional hours are worked by reason of school not being in session as provided in sections 520.6(d) (2) and (3).

Section 520.8

Duration of certificates.

A special student-learner certificate may be issued for a period not to exceed the length of one school year unless a longer period is found to be

justified by extraordinary circumstances. No certificate shall authorize employment training beyond the date of graduation.

[22 F.R. 5683, July 18, 1957]

Section 520.9

Compliance with established standards.

No provision of the regulations contained in this part, or of any certificate issued pursuant thereto, shall excuse noncompliance with higher standards applicable to student-learners which may be established under any other Federal law, or any State law, municipal ordinance or trade union agreement.

[22 F.R. 5683 July 18, 1957]

Section 520.10

Reconsideration and review.

(a) Any person aggrieved by the action of an authorized representative of the Administrator in denying or granting a special student-learner certificate may, within 15 days after such action, (1) file a written request for reconsideration thereof by the authorized representative of the Administrator who made the decision in the first instance, or (2) file a written request for review of the decision by the Administrator or an authorized representative who has taken no part in the action which is the subject of review.

(b) A request for reconsideration shall be accompanied by a statement of the additional evidence which the applicant believes may materially affect the decision and a showing that there were reasonable grounds for failure to present such evidence in the original proceedings.

(c) Any person aggrieved by the reconsidered determination of an authorized representative of the Administrator may, within 15 days after such determination, file a written request for review.

(d) A request for review shall be granted where reasonable grounds for the review are set forth in the request.

(e) If a request for reconsideration or review is granted, the Administrator or his authorized representative may, to the extent he deems it appropriate, afford other interested persons an opportunity to present data and views.

CODIFICATION: Section 520.10 was amended in the following respects:

1. In paragraph (a), the phrase "in denying, granting, or canceling a special student-learner certificate" was changed to "in denying or granting a special student-learner certificate," 22 F.R. 5683, July 18, 1957.
2. Paragraph (b) was amended to read as set forth above, paragraph (c) was deleted, and paragraphs (d), (e), and (f) were redesignated paragraphs (c), (d), and (e), respectively, 21 F.R. 1349, March 1, 1956.
3. Paragraph (e), as redesignated, was amended to read as set forth above, 24 F.R. 204, January 8, 1959.

Section 520.11

Amendment to the regulations in this part.

The Administrator may at any time upon his own motion or upon written request of any interested person setting forth reasonable grounds therefor, and after opportunity has been given to interested persons to present their views, amend or revoke any of the terms of the regulations contained in this part.

REQUEST FOR APPROVAL OF UNLISTED OCCUPATION

Industrial Cooperative Training

This form is for applying for approval of certain occupations for Industrial Cooperative Training not included in the current list (or supplementary list) of approved occupations.

It is preferable to submit this form in duplicate to the State Office prior to placing the student and preparing the training plan. One copy of this request form will be returned to the local school.

Occupation:_____ Code No. _____

School_____ Coordinator _____

Student_____ Training Station _____

Proposed practical training	Proposed related instruction
1. List the jobs, duties or types of work normally done by workers in this occupation in your community.	1. List the subjects or topics of related technical information required of workers in this occupation.

(Omit the above if the training plan is attached)

(Use additional sheet if needed)

(Over)

IE-859-200

2. List the major machines, equipment and tools with which this training station is equipped.

2. List the names and sources of available instructional material (texts, study guides, trade literature) suitable for use in related technical instruction.

3. Reasons why you feel that this occupation described above should be approved for cooperative training.

(Do not write below this line)

This occupation is not approvable for the following reasons:

_____ Not a bona fide trade or industrial occupation.
_____ Does not meet the "2000-hour" requirement
_____ Insufficient related instruction
_____ Other_____

This occupation is approved for

_____ one year of training
_____ two years of training

As described above and for the training station listed only.

(Name and Address of Employer)

Dear Mr. _____:

It is recognized that our Industrial Cooperative Training Student, _____, may during the course of his employment with you be called upon to learn to operate or control machines that the Secretary of Labor has declared particularly hazardous for minors under 18 years of age.

Consequently, this agreement is prepared so that you as the employer, and I as a representative of the school, will know that the work of the student in the occupations declared particularly hazardous shall be incidental to his training; that such work shall be intermittent and for short periods of time, and under the direct and close supervision of a qualified and experienced person; that safety instructions shall be given by the school and correlated by the employer with on-the-job training; and that a schedule of organized and progressive work processes to be performed on the job shall have been prepared.

In recognition of this agreement, and as an indication of your concurrence, please sign this letter in the space provided in the lower left-hand corner, retain the duplicate copy for your files, and return the original copy to me for my files.

Sincerely yours,

_____, Coordinator
Industrial Cooperative Training

TWELVE QUESTIONS PERTAINING TO THE APPLICATION FOR AND CERTIFICATION OF STUDENT LEARNERS

1. In the average situation, for what period of time is a student learner certificate issued?

   Ans. - for one school year only. (Section 520.8). This is an appropriate 36 week period, consisting of 15 to 25 hour workweeks.

2. What rate of pay is applicable to the student learner's employment?

   Ans. - 75% of the applicable minimum wage, i.e., $1.00 per hour-$.75, $1.15 per hour-$.87, and $1.25 per hour-$.94 (Section 520.6 (b)).

3. Does the application for the certificate constitute a temporary certificate?

   Ans. - Yes, if the application is correctly filed. The temporary authorization becomes effective the date the envelope is post marked. Section 520.6 (c) (2)

4. Can a student learner work in some of the occupations declared as particularly hazardous for minors under 18 years of age ?

   Ans. - Yes. (Section 520.5 (d)). If a written agreement is on file as described in the Child Labor Bulletin No. 101, Page 9.

5. May student learners work in any of the Hazardous Occupations that do not have the exemption granted?

   Ans. - No. There is no provision for this.

6. To whom does the Wage and Hour Division look for compliance with the Hazardous Occupations Orders and the terms of the certificate?

   Ans. - the employer.

7. How many hours may a student owrk, under the provisions of a certificate, when school is not in session?

   Ans. - The student may work a number of hours in addition to the weekly hours granted by the certificate: provided, however, that the total hours do not exceed 8 hours on any such day or 40 hours in any week that school is not in session. (Section 520.6 (d) (2) and (3)).

8. How many copies of the application are necessary and who gets them?

Ans. - 4 copies are made. One is given to the student, one is given to the employer, one is given to the school and the original is sent to the Dallas Regional Office address.

9. How many hours may a student learner work at his occupation?

Ans. - He may work a number of hours, that when added to the hours he attends school, will not exceed 40 hours in the workweek. (Section 520.6 (2) (d))

10. May a student learner work under the provisions of a certificate during the summer months?

Ans. - Yes. For example: If a student learner begins his employment at the beginning of the spring semester (approximately January 1), his training may continue through the summer months, provided he is still an undergraduate student, and the summer work is under the auspices of the coordinator.

11. May a student learner ride as a passenger on a vehicle, not as a driver or driver's helper, but as a means of transport to get from job site to job site?

Ans. - Yes. If the student is not primarily engaged in the loading or unloading of the vehicle or as a driver or driver's helper, he may ride on the vehicle as a means of transportation.

12. Is a student learner subject to the Hazardous Occupations Orders, if under 18, whether the employer is paying the minimum wage or not?

Ans. - Yes--and if a student learner s to be employed in a hazardous occupation that carries an exemption (such as Hazardous Occupations Orders No. 5, 8, 10, 12, 14, 16 and 17) there must be a written agreement on file as described in Roman Numeral II under the heading "Student Learner" on the bottom of Page 7 and top of Page 8 of the Child Labor Bulletin No. 101.

FOREWARD

Our nation is undergoing a transition in which the marketing and distribution of the products and services of our farms and industries is performing an increasingly significant role.

Distribution of goods and services has come to be recognized as a vital segment of the dynamic economic structure which has evolved in Indiana. Employment in distributive occupations has risen much faster than has education for employment in these jobs. If Indiana is to continue to prosper and grow, her greatest natural resource, her people, must be developed fully. The expansion of Vocational Distributive Education in all areas of distribution, for all levels of achievement, to all levels of employment, in all geographical areas will contribute significantly to the total educational and economic growth of Indiana's people.

For the existing, and anticipated expansion of, Distributive Education programs in Indiana, this handbook is intended to serve as a valuable guide to assist the beginning as well as the experienced coordinator. It is also designed to serve as a ready reference for local administrators on current D.E. procedures and practices.

The Distributive Education Section of the Indiana State Plan
for Vocational and Technical Education

The State Plan has been developed by a state committee of professional D.E. people and is an agreement with the U.S. Office of Education that the Vocational Distributive Education program in Indiana will be conducted in accordance with the provisions as outlined in the Plan. The use of George-Barden funds and the Vocational Education Act of '63 funds for the State D.E. program is contingent upon the State's adherance to these provisions.

The total D.E. program in Indiana has been developed to agree with the criteria that have been established in the State Plan.

DISTRIBUTIVE EDUCATION SECTION

of the

INDIANA STATE PLAN

for

VOCATIONAL AND TECHNICAL EDUCATION

* Approved by the U.S. Office of Education, November 3, 1965

(This supercedes all previous D.E. excerpts from former Indiana State Plans)

DISTRIBUTIVE EDUCATION SECTION
of the
INDIANA STATE PLAN
for
VOCATIONAL AND TECHNICAL EDUCATION

8.2 Distributive Education

In addition to the provisions in section 1.0 to 6.0 of the State Plan, particularly those in section 2.0, the following special provisions apply to distributive education under the George- Barden Acts:

8.21 Objectives of instruction

Vocational Education in distributive occupations under the State Plan shall be designed to meet the needs of persons over 14 years of age who have entered or are preparing to enter a distributive occupat on.

8.22 Occupations to be served

A distributive occupation means an occupation that is followed by proprietors, managers, or employees engaged primarily in marketing or merchandising of goods or services. These occupations are commonly found in various business establishments such as retailing, wholesaling, manufacturing, storing, transporting, financing and risk bearing.

8.23 Program of instruction

8.23-1 Nature and content of instruction

(1) Content for distributive subject shall be derived from functions of distribution: selling, sales promotion, buying, operations, marketing research, and management. Product knowledge, service skills, communications, and calculations associated with attainment of occupational objectives shall be incorporated into the instructional program.

8.23-2 In preparatory programs conducted in the full-time school, the following conditions shall prevail:

(1) Only those who normally may be expected to complete a program of training should be enrolled.

(2) The schedule of enrollees and teacher coordinators should be adjusted to accommodate time requirements for supervised cooperative training and participation activities requiring specialized laboratory experience under individual training plans.

8.23-3 Participation activities shall be required in all preparator training.

(1) Classes utilizing supervised cooperative training should be limited to enrollees who will complete no less than 450 hours of regularly scheduled employment during a twelve month period. Such classes should meet the following conditions: (1) school approval of on-the-job training activities, (2) classes utilizing participation activities as identified in 8.23-2 (2) with credit recognition for proficiency in on-the-job assignments, (3) pay for work performed.

8.24 Types of classes

The regular instructional program is designed for full-time students, high school and post high school, whose employment goals represent a group of recognized occupations in a field or function of distribution.

8.24-1 Preparatory classes utilizing supervised cooperative training should be organized according to one of the following plans:

Plan A - a program covering two school years, providing an average of at least one class period per day of the regular schedule for vocational instruction in distribution.

Plan B - a program covering one school year, providing an average of at least two class periods per day of the regular schedule for vocational instruction in distribution.

Plan C - a program covering one school year, providing an average of at least one class period per day of the regular schedule for vocational instruction in distribution in classes limited to the cooperative group enrolling: (a) those who have completed one unit (two semesters) of vocational instruction in distributive subjects incorporating participation activities or (b) those who have completed at least two units (equivalency of four semesters) of instruction in a vocational program approved under the State Plan.

8.24-2 Preparatory classes incorporating participation activities in individual training plans should be organized according to one of the following plans:

Plan D - a program covering two school years, providing an average of at least one class period per day of the regular schedule for vocational instruction in distribution.

Plan E - a program covering one school year, providing an average of at least two class periods per day of the regular schedule for vocational instruction in distribution.

Plan F - a program covering one school year, providing an average of at least one class period per day of the regular schedule for vocational instruction in distribution, enrolling only those who have completed the equivalent of four semesters of instruction in a vocational program approved under the State Plan.

8.24-3 Instruction for full-time students whose occupational goals represent limited initial employment should be provided under intensive, modified or upgraded schedules when organized and approved as demonstration projects.

8.24-4 Instruction designed for persons whose occupational goals also require competencies developed through other vocational programs should be organized.

(1) under Plans C or F, or
(2) as a demonstration project, or
(3) as a separate class taught by a teacher coordinator or a special purpose teacher is one who has occupational competency on one or more specialized areas and holds a non-conventional teaching certificate.

8.25 Program for adults

Preparatory and supplementary classes for adults not available for full-time study should meet for no less than ten hours and lead to a specified occupational achievement or be part of a series of classes leading to an occupational goal.

8.26 Qualifications

8.26-1 Teacher in Preparatory Programs

(1) Education

(a) Professional

A baccalaureate degree from an institution of higher education of standard accreditation.

A minimum of 18 semester hours of credit in professional education always including student teaching, methods of teaching distributive subjects and at least two semester hours in the philosophy, organization and administration of vocational distributive education programs.

(b) Technical

A minimum of 24 semester hours in the technical field of distribution such as marketing; advertising; retailing; salesmanship; color, line and design; economics; management; and textiles and clothing, always including at least two semester hours in each of the following: marketing, advertising, retailing, and salesmanship.

(2) Experience

Two years of successful full-time employment in the distributive occupations or a minimum of 1500 clock hours of approved and supervised work in the distributive field under an approved teacher-training program or a combination equivalent thereto.

Additional approved practical experience over two years may be accepted in lieu of technical training at the rate of one year for three semesters hours with a maximum of nine semester hours allowed.

8.26-9 Teacher Coordinators in Preparatory Programs

Should meet same qualifications as teachers except that two semester hours in Techniques of Coordination are also required in professional education.

8.26-10 Local Supervisory Personnel

Should meet some qualifications as teacher-coordinators plus two years of experience in a distributive education program.

GENERAL GUIDELINES FOR DEVELOPING A LOCAL PLAN FOR A HIGH SCHOOL VOCATIONAL DISTRIBUTIVE EDUCATION PROGRAM

Any recognized public secondary school may be approved to organize a Vocational Distributive Education program and be eligible for reimbursement provided the school meets the requirements of the State Plan.

The essentials and requirements for a reimbursable Vocational Distributive Education program, as presented in this document, are designed to assist school administrators and teacher-coordinators in the preparation of their Local Plan.

The guidelines presented are not meant to be exhaustive, and the various provisions need to be adapted to local situations. The Program of Instruction identifies the various types of programs provided for in the Indiana State Plan. Each school should choose the program which best meets the needs of the D.E. students, the community, and the school.

The generalized provisions included in these guidelines were developed by Mr. Ralph D. Wray in cooperation with the Distributive Education Division of Indiana University and the Distributive Education Section of the Indiana Division of Vocational and Technical Education.

CHARACTERISTICS OF PROGRAM

LOCAL PLAN FOR _____ HIGH SCHOOL
FOR
VOCATIONAL DISTRIBUTIVE EDUCATION

This plan is a cooperatively developed working agreement between _____ High School and the Division of Vocational and Technical Education of the State Department of Public Instruction, which when approved becomes a contractual agreement and an instrument for evaluation.

OBJECTIVES OF DISTRIBUTIVE EDUCATION

To offer instruction in merchandising, marketing, and management in all areas of Vocational education.

To aid in the improvement of the techniques of distribution in all areas of vocational education.

To develop a broader understanding of the social and economic responsibilities of those engaged in distribution in a free, competitive society.

To provide job preparatory vocational training in the marketing and distributive occupations for which there is need for preemployment training.

To develop competencies in basic skills, social skills, and supervisory skills and an understanding of economic concepts and product or service knowledge.

PURPOSE OF DE IN _____ HIGH SCHOOL

The purpose of Vocational Distributive Education in _____ High School is a continued effort to satisfy the vocational, social, and personal needs of each student enrolled. The Distributive Education program will strive to develop skills and present knowledge that will prepare the student for gainful employment, and for advancing in the field of marketing, merchandising, and management, that he has chosen as his vocational career objective in a distributive occupation.

EVIDENCE OF NEED FOR THE PROPOSED PROGRAM

THE NEED FOR THE PROPOSED PROGRAM

Each school system should determine the needs of the community for a Vocational Distributive Education program. This can be accomplished by either one of two methods, or both.

1. The Community Survey will enable the administration and the future coordinator to look at all phases of the future program. The survey should be oriented to include information pertaining primarily to the availability of on-the-job training for students on the cooperative program, and will determine the interest of retail, wholesale, and service organizations in the establishment of a D.E. program in the local school. (See Appendix A)

In the actual school system, a preliminary to the physical survey should be a consensus of students' receptivity to the D.E. program. Their attitude will be a key to one's approach in introducing the program.

2. A documented report from the local office of the Indiana Employment Security Division which indicates the persistent job openings in distributive occupations in the area, and the need for a training program to develop skills for gainful employment in the job openings.

ADMINISTRATION PERSONNEL RESPONSIBILITIES

To cooperate with the employer to the fullest extent possible.

To provide the appropriate learning environment and instruction materials.

To provide the materials necessary to promote a successful program.

To strive to arrange schedules of classes in such a manner that DE students will have little difficulty in meeting requirements.

TEACHER-COORDINATOR RESPONSIBILITIES

To recognize that the occupational experience students receive is an essential supplement to classroom instruction but that such employment does not take the place of the instruction provided by the teacher-coordinator.

To continue to learn more about this discipline at every opportunity.

To counsel, guide and work for the improvement of the student.

To cooperate with the employer in all aspects of the training program.

To consult with the employer and plan individualized instruction needed by each trainee.

To assist in placing each student in a job most suitable for his interests and capabilities.

To continually strive to upgrade the entire program.

DUTIES OF TEACHER-COORDINATOR

To teach a preemployment class or classes. (In extreme cases, the preemployment or pre-co-op, classes may be taught by a qualified preparatory teacher, providing there is close cooperation with the teacher-coordinator and the subject matter taught orients the D.E. student to the world of work in the distributive occupations.)

To teach a related instruction class for the students enrolled in cooperative training or to provide instruction and supervision for students enrolled in a vocational project centered training class.

To teach other classes which may be assigned to him, but always being permitted to spend at least 30 minutes per week in coordination activities for each student enrolled in either cooperative training or in projects-method training.

To assist and promote adult education classes in distributive occupational training.

PROVISIONS FOR EXTENDED CONTRACT

It is recommended that the D.E. Teacher-Coordinator be placed on an extended contract of one month beyond the regular school year so that he may have adequate time to devote to coordination and follow-up activities, working with advisory committees, and in other activities contributing to the continued improvement of the program.

Experience has demonstrated this to be very valuable in the development of a sound program, especially in providing sufficient time for the effective placement of student-trainees. There are two periods in which most placement is done. One period is immediately at the close of school in the spring, and the other is just before school starts in the fall.

All of the additional time spent by the coordinator beyond the regular school year on the extended contract is reimbursable at the rate of 100% from vocational education funds.

QUALIFICATIONS OF A VOCATIONAL DISTRIBUTIVE EDUCATION TEACHER COORDINATOR

Teacher-coordinators shall be certified in accordance with the professional, technical and occupational experience requirements as outlined in sections 8.26-8 and 9 of the Distributive Education section of the Indiana State Plan for Vocational and Technical Education, and part (h) pages 30-31 of Bulletin 400 of the Division of Teacher Education and Certification.

Teachers in preparatory programs must meet the same requirements with the exception of the two semester hours in Techniques of Coordination.

A teacher-coordinator of a cooperative program is the approved teacher who teaches the related class and also coordinates the class work of the student-learner with his on-the-job experiences.

It is recommended that the teacher coordinator teach both the preemployment and the cooperative related classes.

Prospective teachers seeking approval as a certified Vocational Distributive Education teacher or teacher-coordinator should arrange to have official transcript(s) of records sent to the State Supervisor of Distributive Education, Division of Vocational and Technical Education,. 600 Old Trails Building, 309 West Washington Street, Indianapolis, Indiana 46204. (Social Security number to be included.)

In addition, the prospective teacher will need to submit two copies of D.E. Form V-52 pertaining to his occupational experience in distributive occupations.

Limited certification may be granted for a period of 1 year for instructional personnel who indicate a definite plan for meeting requirements for full certification. Renewal of limited certificates is contingent upon the completion of necessary courses to eliminate any professional and technical deficiencies.

The Distributive Education Teacher-Coordinator has had professional training in the Distributive competencies plus full-time occupational experience in marketing, merchandising, and management. He, or she, is eager to provide training in the distributive competencies either along as a total, singular function or jointly in cooperation with other vocational disciplines to better prepare young people for gainful employment. His professional training in coordination techniques and the methodology of providing relevant work experience makes it possible for him to coordinate on-the-job training activities for other vocational areas; provided there are trained teachers from the other vocational areas available to teach the related in-school classwork for their specific discipline.

Adult and evening school instructors shall be selected by the teacher-coordinator in cooperation with the Director of Adult Distributive Education, and shall be approved for Non-Conventional Certification by the State Supervisor of Vocational Distributive Education.

PROVISIONS FOR TEACHER-COORDINATOR ATTENDING STATE-CALLED WORKSHOPS

The teacher-coordinator shall attend the Annual Summer Conference for Vocational Distributive Education called by the State Supervisor of Vocational Distributive Education and other state-called workshops or student conferences in which he has student participants.

PROVISIONS FOR REIMBURSING TRAVEL EXPENSES FOR COORDINATOR

The teacher-coordinator shall be reimbursed at the rate of 50% for local travel expense incurred as a result of carrying out his coordination and supervision responsibilities.

Attendance at state-called conferences is reimbursable by the state at the rate of 100%; mileage and per diem will be allowed and reimbursed in full according to state travel regulations.

PROGRAM OF INSTRUCTION

PROGRAM OF INSTRUCTION

Each school system should choose the program of instruction which best meets the needs of the students, the community, and the school.

The regular instructional program is designed for full-time students, whose employment goals represent a group of recognized occupations in a field or function of distribution.

The career objective of each student-trainee enrolled in a Vocational Distributive Education program shall be a matter of record, and shall be indicated by S.I.C. numbers from the Standard Industrial Classification for Distributive Education.

There are two methods of providing relevant work experience for student-trainees enrolled in a Vocational Distributive Education program:
(1) The Cooperative Method and (2) The Projects Method

(1) THE COOPERATIVE (ON-THE-JOB TRAINING) METHOD

Preparatory classes utilizing supervised cooperative training should be organized according to one of the following plans:

Plan A - a program covering two school years, providing an average of at least one class period per day of the regular schedule for vocational instruction in distribution. (Schools utilizing this plan enroll both junior and senior students in vocational on-the-job training.)

Plan B - a program covering one school year, providing an average of at least two class periods per day of the regular schedule for vocational instruction in distribution. (Schools utilizing this plan should make the program available to senior students.)

Plan C - a program covering one school year, providing an average of at least one class period per day of the regular schedule for vocational instruction in distribution in classes limited to the cooperative group enrolling: (a) those who have completed one unit (two semesters) of vocational instruction in distributive subjects incorporating participation activities, or (b) those who have completed at least two units (equivalency of four semesters) of instruction in a vocational program approved under the State plan. (Schools utilizing this plan will provide a preemployment class involving participation projects for juniors and related instruction for seniors enrolled in vocational on-the-job training.)

GENERAL RELATED INSTRUCTION

The content of the instructional material is to be selected on the basis of the objectives of the program and is the joint responsibility of the local board of education, the school administrator, and the teacher coordinator. Periodic evaluations of the progress of the program are to be made by the State Supervisor.

PROVISIONS FOR INDIVIDUALIZED INSTRUCTION

The teacher-coordinator will consult with each employer and student to determine individual needs. Instruction can then be geared to the occupational needs and the career objective of the student.

Job study guides and manuals shall be utilized on an individual basis to aid in presenting material which will be more meaningful and are keyed directly to the on-the-job experiences of each student-trainee.

PROGRAM OF ON-THE-JOB TRAINING

Criteria for Selection of Training Stations

The following criteria shall be used in the preliminary selection of training stations:

1. Is the employer in sympathy with the idea of training?

2. Will he be willing to cooperate with the school in a cooperative program of school and on-the-job training?

3. Can he employ school students on a part-time basis.

4. Will he be willing to keep the students during the entire school year?

5. Does the business establishment provide prospective full-time employment for students after the completion of school?

6. Does this business have equipment and working conditions that will provide a good all-round training program and on-the-job work experience for student trainees.

7. Are desirable working conditions present that will not be detrimental to the student's physical, mental, or moral well being?

8. Is a training sponsor or supervisor present who can be assigned the job of helping the part-time worker?

9. Are conditions for pay of employees satisfactory?

10. Is the location of the business establishment satisfactory to the student and for coordination activities?

11. Will the employer really be interested in helping and training his student trainee to become an efficient worker in our economy?

12. Is the occupation one that requires skills, attitudes, and information that can be presented and developed in the classroom to supplement on-the-job experience?

TRAINING-SPONSOR RESPONSIBILITIES

(The training sponsor may be the owner or manager, or he may be a responsible individual appointed by management.)

To provide regular employment, (a minimum of 15 hours per week) throughout the school year for the student working in the training station.

To rotate the student's work assignments so that the student receives training in several aspects of the business.

To counsel with and direct the student regarding means of improving his performance.

To evaluate or rate the student at regular intervals so that the coordinator may better direct the student classroom instruction.

To pay the students at least the going wage for beginning employees.

To dismiss the student only for cause, and after consultation with the coordinator.

To confer with the coordinator on the student's progress.

To assist the coordinator in keeping up to date

RECOMMENDED EMPLOYMENT SCHEDULE OF TRAINEES

Students enrolled in the program are required a minimum of 15 hours per week of supervised employment and on-the-job training or sufficient hours of vocational project centered training. In situations utilizing on-the-job training, at least one-half of this work experience training should be during time that school is in session. Therefore, students shall be released in the afternoon for work experience training according to the agreed upon training schedules.

PROVISIONS FOR ON-THE-JOB TRAINING

The training-sponsor and the teacher-coordinator will agree upon a training program schedule prior to the on-the-job training. This will ensure a minimum of 15 hours per week of supervised employment and on-the-job training during the school year.

There shall be a training memorandum or agreement between the local school and the employing establishment which shall include the interrelationship and responsibilities of the student-learner, teacher-coordinator and the training establishment.

The course of instruction for each student-learner on the job is to be in the form of a step by step training plan which is in turn derived from a realistic analysis of the tasks, duties and responsibilities of the student-learner and his part-time occupation. The step by step training plan shall indicate what is to be learned and whether it is to be taught in the classroom or on the job.

The student learner shall be paid a beginning wage comparable to that paid other learners in similar occupations, and will be in accordance with all state and federal wage regulations.

PHYSICAL FACILITIES

The following equipment is proposed for equipping a classroom to be used for either a cooperative program or a projects-method program. Obviously, schools planning to use vocational project centered training classes will need more extensive equipment planne in accordance with the needs of the community and the students.

Rectangular tables (for students)

Armless chairs that stack

Teacher's desk and chair

Wash basin (for show card writing and display)

Bulletin boards (Instructional aids)

Chalkboards (Instructional aids)

Multiple drawer cabinet (one drawer for each student for job-study-guides and material storage)

Storage Cabinet

Bookcase (for reference books)

Magazine rack (for current publications in the areas of retailing and marketing)

Peg-board (for display purposes)

Tape-recorder (to be used for analysing sales presentations and demonstrations)

Cash-register (to aid in teaching students the proper use of the cash register)

Display case (to aid in the instruction concerning display and to allow the students to experiment in building creative and eye-catching displays)

Wrapping counter (to aid in the instruction concerned with wrapping merchandise and to allow students an opportunity to develop talents in producing a well wrapped package.)

Display window (located so that it will be visible from the main hallway. If this window is to display full-size mannequins the inside height should be at least 8 feet, depth 4 feet, and length according to available space)

Overhead projector (instructional aid)

A separate office and conference room should be provided for the teacher-coordinator. This room is needed for counseling and consultations. The office should be equipped with a telephone to allow the coordinator to maintain close contact with students, training stations, and the business community.

Carpeting is recommended on the classroom and office areas because of the valuable noise elimination, ease of maintenance, and appearance factors.

COURSE DESCRIPTION - PLAN C SAMPLE - COOPERATIVE METHOD

11th Year (Pre-Cooperative)

1st Semester	2nd Semester
Periods	Periods
1 Elective	1 Elective
2 SALESMANSHIP	2 MERCHANDISING
3 Elective	3 Elective
4 Lunch	4 Lunch
5 Requirement	5 Requirement
6 Requirement	6 Requirement
7 Requirement	7 Requirement

12th Year (Cooperative)

1st Semester	2nd Semester
Periods	
1 Requirement	1 Requirement
2 Elective	2 Elective
3 D.E. Related Class	3 D.E. Related Class
4 Lunch	4 Lunch
5 On-the-job	5 On-the-job
6 On-the-job	6 On-the-job
7 On-the-job	7 On-the-job

As an aid to counseling the student who has indicated an interest in the cooperative D.E. program, it is suggested that the following subjects from the general curriculum would be valuable in adding to the vocational competency of the student: (these may be taken prior to or concurrently with the D.E. courses).

Business Math	Business Law	Typing
General Business	Consumer Economics	Speech
Business English		

RELATIONSHIP BETWEEN COOPERATIVE AND PROJECT METHODS

Similarities

1. Both include school approval and involvement in vocational learning experiences - project training or cooperative training.

2. Both have clearly defined instructional goals with the major goal of preparation for gainful employment in a distributive occupation, according to individual career goals.

3. Both provide credit recognition for progress and proficiency in the vocational learning experiences of either project or cooperative training

4. In both adequate time is needed by the coordinator to relate classroom instruction to either project or cooperative training and vice-versa - coordination activities.

5. In both adequate time is needed for student participation in either project or cooperative training.

6. The learning experiences of both project and cooperative training should be related to occupational objectives.

7. Individual project training plans or individual cooperative training plans are recommended for both.

8. Both involve some occupational experience. (It is the primary avenue for vocational approach in the cooperative method.)

9. Both are enriched and supplemented by club activities which provide an opportunity for students to demonstrate and refine the competencies

10. Both are methods of vocational application to assure application to employment requirements.

11. For both, teaching techniques utilizing student participation enable the coordinator to relate classroom instruction to either project or cooperative training and vice-versa.

Differences

1. Greater school involvement and responsibility in the project method.

2. Greater necessity for the individual training plan in the project method.

3. Less credit may be given for project training than for cooperative training.

4. Occupational experience is the primary avenue of vocational application in the cooperative method; it is one type of project in the project method.

5. Club activities serve additionally in the project method as types of projects.

(2) THE PROJECTS METHOD

Schools planning to use vocational project centered training classes should also choose the program of instruction which best meets the needs of the students, the community, and the school.

Preparatory classes incorporating participation activities in individual training plans should be organized according to one of the following plans:

Plan D - a program covering two school years, providing an average of at least one class period per day of the regular schedule for vocational instruction in distribution.

Plan E - a program covering one school year, providing an average of at least two class periods per day of the regular schedule for vocational instruction in distribution

Plan F - a program covering one school year, providing an average of at least one class period per day of the regular schedule for vocational instruction in distribution, enrolling only those who have completed the equivalent of four semesters of instruction in a vocational program approved under the State plan.

The vocational project centered training classes should include both group and individual projects. In order to be more meaningful, a directed occupational experience should be included where possible as an individual project. This would consist of an actual employment experience in a distributive occupation related to the student's career objective for a specified period of time.

The projects-method program may be used as a pre-cooperative training program in the 11th year with cooperative training as the capstone course in the 12th year; or it may be used as a terminal program alone in the 12th year for:

(1) Small schools who do not have a business community large enough to support the cooperative program.

(2) Students who do not wish to take the time for cooperative training but who desire comprehensive training in the distributive education areas of marketing, merchandising and management

(3) Students who, because of ability level, are not ready to be placed on the labor market.

(4) Other specific adaptations are possible

In addition, the projects-method in Distributive Education serves as a valuable adjunct in providing the distributive competencies necessary for the marketing, merchandising, and management phases of the other vocational areas of Agriculture, Home Economics, Office, and Trade and Industrial Education.

Following are five essential elements that should be recognized in planning for the project method:

1. The project method seeks the same learning outcome as does the cooperative method

2. The project method extends classroom instruction into a laboratory environment

3. The project method provides learning experiences individualized according to occupational objectives and student differences

4. The project method gives the teacher-coordinator direct control of the pace and nature of laboratory activities assigned to individual students

5. The project method uses individual training records to document projects assigned and completed by trainees.

CLASSIFICATION OF PROJECTS (SAMPLES) THAT MAY BE USED FOR OCCUPATIONAL PREPARATION

A. Directed Observation - group and individual projects
   1. Field trips
   2. Viewing selected films and televised programs
   3. Street or floor counts
   4. Trade exhibits and museum visits
   5. Non-paid schedules of "over-the-shoulder" observations of personnel in distributive occupations in the employment situation
   6. Trips with management representatives to resources (preferably those in close proximity)
   7. Customer calls with sales representatives or with delivery services
   8. Attendance at shows and sales rallies
   9. Participation in Distributive Education Clubs of America judging competitions

      For example, the project of a student with a mid-management objective in general merchandise might be to observe the effect of weekly advertised promotions on sales procedures, stockroom and warehouse activities, layout, stock control, telephone order, and delivery schedules. A student planning a career in home furnishings might be assigned to a project to observe in a shop specializing in re-upholstering and furniture refinishing or to review and evaluate a film on furniture manufacturing as an employee training device.

B. Analysis and Evaluation (of appropriate situations and materials) - group or individual projects.
   1. Use of the incident process or case studies
   2. Creative marketing problems
   3. Interviews and surveys
   4. Trade journal reading
   5. Listening to tapes and records
   6. Comparing profit and loss statements

For example, a student whose occupational objective is in real estate might analyze the duration of rental living when both husband and wife are working. This project might be assigned in connection with a study of the consumer's influence on product availability or the functions of market research. An objective in apparel sales might suggest a project requiring regular study of a trade paper or magazine with interpretations made in relation to each unit in the curriculum.

C. Discussion - group projects
   1. Panel presentations and discussions
   2. Buzz sessions
   3. Committee work
   4. Conference discussions
   5. Brainstorming
   6. A Distributive Education Clubs of America meeting

A group of students preparing for the grocery field might undertake a project related to self-selection, present their findings in oral reports, and lead a group discussion focusing on management decisions about customer traffic patterns, shopping convenience, automation, pilferage, and suggestion sales. Students needing to gain facility in communications might be assigned projects utilizing buzz groupings to discuss such topics as characteristics of the trade area, customer differences, and product values in relation to the standard of living wage payment plans, uses or credit and job ethics.

D. Practice and independent study - individual and group projects
   (Practice in basic skills gathering and verifying facts and idea creation - individual or group)
   (Independent study assignments - desirable when an investigation of written materials would provide needed depth in a product area, for example.)

   Examples are:
   1. Maintaining an occupational diary
   2. Role playing job incidents with playback by a recording device
   3. Completing programmed materials developed in cooperation with trade associations or training departments of distributive organizations.
   4. Role playing decision-making by means of business games
   5. Developing a product promotion plan
   6. Answering advertisements
   7. Participating in employment interviews

   A student with a job objective in warehousing might be assigned a project based on programmed lessons in inventory controls while that of a student planning a career in industrial sales would require practice of sales representations on a tape recorder, thus permitting the trainee to hear his own performance objectively.

Simulated or Directed Occupational Experience

A. Simulated Occupational Experience - individual and group projects
   1. A school store
   2. A county fair
   3. A bazaar
   4. A franchised product
   5. A Distributive Education Clubs of America activity
   6. A seasonal buyer's market

B. Directed Occupational Experience - individual projects
   (Actual employment experience in a distributive occupation related to the student's career goal for a specified period of time.)

THE ADULT PROGRAM

Provisions For Supervision and Coordination

As a part of the adult evening program, training in marketing and distributive occupations shall be promoted. The program will be supervised by the local teacher-coordinator. Classes will be taught by competent instructors experienced in marketing activities.

Types of Classes

The Distributive Education adult program shall consist of short, intensive courses ranging from help for management to special sessions directed at supervisory sales and service personnel. Each program shall be tailored to meet the needs of the individual group, person, or business establishment.

PROGRAMS FOR YOUTH AND ADULTS WITH SPECIAL NEEDS

Specific programs are to be adapted to the needs of the enrollees, the school and the community.

ENROLLMENT IN THE PROGRAM

ENROLLMENT IN THE PROGRAM

Enrollment in either the cooperative method or the projects method program is dependent upon the Plan (A,B,C, or D,E,F) utilized by the local school corporation as a program of instruction. Cooperative method student-trainees must be eligible for work permits according to State and local regulations.

Selection Procedures

Students enrolling in Vocational Distributive Education shall be expected to declare a career objective. Students will be selected on the basis of their occupational needs and abilities to profit from the training.

Pre-requisites

Any senior enrolling in the cooperative program should have completed a preemployment course successfully during the junior year, or shall have completed four semesters of instruction in another vocational program approved under the State Plan.

PROVISIONS FOR LOCAL CLUB PROGRAM

PROVISIONS FOR THE LOCAL CLUB PROGRAM

Added to the classroom instruction and on-the-job instruction and application, the Distributive Education Club completes the total instruction program. The broad purposes of the club are vocational understanding, civic consciousness, social intelligence and leadership development.

The Distributive Education trainee misses many of the normal social activities of school life. Therefore, social activities should be included in the club program.

Because the business community is involved in civic activities and Distributive Education students are closely associated with the business community, civic activities shall be included in the local club program.

One of the objectives of the Distributive Education program is to develop socially and professionally well-rounded citizens. This objective can be partially achieved through benevolent activities within the DECA program.

The club shall embark on several worthwhile projects such as: (1) Annual Employee-Employer Appreciation Banquet, (2) community service projects, (3) attendance at conferences as well as other civic, educational, and service projects. This will make fund raising activities essential.

The club will also take part in professional activities as opportunities allow.

The Distributive Education Club shall be based upon three principles:

(1) The club shall be utilized as a teaching method
(2) The club shall be conducted as co-curricular
(3) The club purposes shall be educationally sound and identifiable.

The sponsor of the local DECA club shall be the teacher-coordinator.

PROVISIONS

FOR

LOCAL ADVISORY COMMITTEE

PROVISIONS FOR ADVISORY COMMITTEE

An advisory committee shall be established in an initial effort to obtain advice to improve the Vocational Distributive Education program. Nine members shall be chosen from the community; the teacher-coordinator shall serve as a member; and the vocational director or superintendent shall also serve. Members shall be chosen on the basis of the following qualifications. Members must have had recent, successful, firsthand, practical experience in the distributive occupations. They should have the respect and confidence of their associates. Members must be able to keep in close contact with school officials. This means they should be available to meet when requested. Candidates shall also be chosen on the basis of intelligence, integrity, keen and balanced mind, courage and unselfish spirit. They should be potentially responsible, civic minded, and cooperative committee members.

How Selected, Who Appoints

Advisory committee members shall be selected by the teacher-coordinator and approved by the superintendent and school board. Members shall serve for a period of one year. At the end of the year, members shall be either reappointed or replaced.

General Duties and Responsibilities

To provide the school administration with advice on the types of courses in marketing and distribution needed to satisfy the day and evening training needs of the community.

To help in the work of community surveys by determining the data to be gathered and by supporting the studies and gaining the best community reaction to them, as well as by halping to evaluate the returns from the studies.

To help plan courses and establish ways for keeping instruction practical and functional.

To help set up standards for entrance into vocational distributive courses and to assist in obtaining jobs for graduates who have successfully completed their training.

To assist the teacher in relating his instruction to the particular needs of the community.

To recommend applicants for training on the basis of the qualifications required by the organization in which the student is to be taught; help the school conform to the state wage and hour laws; recommend and help to set up the local training standards. The committee should discuss working agreements, changes in job training status and all other student-training program problems.

To offer suggestions and advice in determining wage rates, training stations, types of training, and aid in the general promotion of the program.

PROVISIONS FOR SURVEYS

AND

FOLLOW-UP STUDIES

PROVISIONS FOR SURVEYS AND FOLLOW-UP STUDIES

Surveys shall be conducted as the need becomes apparent. The objectives and scope of surveys shall depend upon the needed information and purpose.

An annual follow-up study of June graduates from the program will be made each fall to determine the value and effectiveness of the vocational training received by the student-trainees. Results of this study are to be submitted to the State Supervisor of Vocational Distributive Education.

Surveys and follow-up studies may be conducted solely by the teacher-coordinator or may be conducted jointly by the teacher-coordinator and the guidance department.

PROCEDURES FOR LOCAL EVALUATION

PROCEDURES FOR LOCAL EVALUATION

Periodic analyses of occupations for which training is being given will be used to determine if the content of courses being offered is effective or needs revision. Outside consultants will be utilized.

Classroom Instruction

Advice and cooperation of the various occupational groups concerned will be used in evaluating both specific and related instruction. Instruction shall also be examined to determine if this phase of the training is effective in developing marketable skills, abilities, understandings, attitudes, work habits, and appreciations to the point of enabling the trainee to get and hold a job in the occupation chosen for his career objective. Instruction shall also be expected to reveal continuous research by the teacher.

On-The-Job Training

The work experience phase of the training will be evaluated on the basis of being educationally defensible. On-the-job training must provide a variety of learning experiences that will challenge the individual-trainee in order to be worthwhile. The teaching must be of such nature that the student-learner will possess skills suitable for entering and succeeding in the occupation upon graduation. Each on-the-job training experience will be periodically evaluated on an individual basis.

REPORTS AND FORMS

REPORTS

Required statistical and descriptive reports of activities shall be submitted by the coordinator to the local school administration and the State Supervisor of Vocational Distributive Education.

FORMS

Sample copies of each of the various forms used by the local school such as application for admittance to program, evaluation forms, training agreements, schedule of training experiences, etc. are included. (See Appendix B,C)

(The samples included are not intended to serve the needs of every program in every community. They are merely indicative of those which have been used effectively in various communities in the State.)

RESPONSIBILITIES

AND

PROVISIONS FOR REIMBURSEMENT

RESPONSIBILITIES

Local School

To operate a distributive education program in accordance to the agreements set forth in this local plan.

To revise this local plan as the need to do so becomes apparent.

Vocational Division
State Department of Public Instruction

To notify the school of revisions in the State Plan which require modifications in the local plan.

To reimburse the school in accordance with state reimbursement procedures.

Distributive Education Division
Indiana University
Indiana State University

To assist the school in the promotion of marketing and distribution programs in both the high school and adult evening programs.

To assist the teacher-coordinator in keeping current on changes in instructional materials, publications, methods and techniques, and other aids.

PROVISIONS FOR REIMBURSEMENT

Reimbursement by the Vocational Division of the State Department of Public Instruction will be recommended according to a schedule to be agreed upon and attached to this plan.

Indicate the amount of the total salary (including extended contract) of the teacher-coordinator.

Using equipment request form DE 746 indicate the items of equipment and the dollar amount for the proposed program.

A P P E N D I X A

(COMMUNITY SURVEY)

COMMUNITY SURVEY

To provide a sound basis for starting a Cooperative Distributive Education program, it is advisable to determine (1) the needs of the community and (2) the community's willingness to cooperate with the school in the program.

A survey will enable the future D.E. Coordinator, or the school, to plan the initial phases of the program more effectively.

The following is a sample survey and may be revised, or adapted, to any school's needs.

(L E T T E R H E A D)

DATE: _____

TO: MANAGER OR PERSONNEL DIRECTOR

_____
(Name of store)

Many men and women have entered the world of commerce in a hap-hazard, accidental, disorganized way. The distributive activities of marketing, merchandising, and management require more than the accidental applicant.

_____ is considering a Distributive
(Name of school)
Education program to expand its vocational curriculum. This survey is being conducted to determine your interest in participating with the school in a Distributive Education program.

DISTRIBUTIVE EDUCATION is a vocational training program in which school and business cooperate to provide specialized training for high-school seniors who are considering a career in business after graduation from high school. It is intended for young men and women who have a career objective in a distributive occupation and who can meet the qualifications set up for entrace into the program.

D.E., as it is commonly referred to, combines the best in high school education with the best in business training experience to enable our young people to become better workers, better citizens, and better persons. A D.E. trainee in the senior year spends the morning in school carrying a bssic school program, and spends the afternoon under the supervision of local stores selected as training establishments. This program brings the business world into the classroom, and the classroom into the business world -- to bridge the gap between theory and actual practice.

Interested? Would you be kind enough to complete the information sheet attached?

Your cooperation will be greatly appreciated. Your early response will be equally important -- for it will expedite the preparation of the survey results. Would you be able to complete the form by _____? The survey is confidential and will not be shown to other community businesses. If you wish, I shall stop by to get it, or you may mail it in the stamped, addressed envelope provided.

Thank you.

(COOPERATIVE FORMS)

DISTRIBUTIVE EDUCATION TRAINING MEMORANDUM

Name of trainee _____

Name of business firm _____

Address of business firm _____

The purpose of this memorandum is to set forth a plan for training the student, who is interested in receiving coorelated classroom and job instruction in the important field of distribution. The objective of the plan is to organize the training on the best possible basis, so that maximum learning and advancement in efficiency may be achieved by the student. An outline of the work experiences and a course of study paralleling these experiences has been planned jointly by the employer and coordinator as shown on the second page of this memorandum.

The student agrees to work and study diligently, both when receiving business experience and when attending school. The student also agrees to take advantage of every opportunity to improve in efficiency, knowledge, and personality in order to qualify to continue in his chosen occupation as a full-time employee at the end of the training period. It is understood that the trainee will observe the same regulations which apply to other employees.

The trainee will work a minimum of fifteen (15) hours per week, one-half of these hours (7½) will be on school time (12:30 to 4:00 p.m.), and one-half (7½) on the trainees own time after 4:00 p.m. at night, Saturday, or Sunday.

The Employer agrees to assist the schools in giving the student well-rounded training by assigning the student to several phases of work experience during the training period. Training sponsors, usually department heads, may be appointed to direct the student's job training as each phase of the work is assigned.

In addition to providing practical instruction and experience, the employer agrees to pay the student according to the following plan:

1. The beginning wage will be ____per____for____hrs. per week. (Minimum 15 hrs.)
2. A wage adjustment based upon the abilities of the student and consistent with existing employment conditions in the occupation will be given each___ _____.
3. The trainee will receive a _____% commission on gross sales.

The coordinator will assist the employer in carrying out the continuous training of the student, and will also conduct the classroom instruction and correlate this instruction with the job training received by the student. The coordinator has explained the benefits of Distributive Education training to the parents or guardians of the student, and has secured their permission for the student to receive the classroom instruction and the business experience.

The training period begins on _____19___, and extends through the scholastic year ending_____19____. This plan has been reviewed and approved by the Advisory Committee. It may be terminated, for just cause, by any person named on the memorandum, with the understanding that due notice will be given to all interested parties.

For one semester of successful participation in the cooperative program, the student-learner will earn _____ units of high school credit.

The coordinator will visit the training station at regular intervals to observe the student-learner on the job, to discuss and evaluate his job progress with his employer and job trainer, and to find out what related instruction is needed at a particular time.

DISTRIBUTIVE EDUCATION INFORMATION SHEET

General Information

Distributive Education, commonly referred to as DE, identifies a program of education. DE students learn and earn in the program by spending part of the day in class and part of the day on the job.

The cooperative program is not designed to develop distributive specialists, but rather to provide balanced, comprehensive, instructional programs in all areas of distribution and marketing to aid in improving techniques of distribution, and to help the student develop and understand the social and economic responsibilities of those engaged in distribution.

In his training phase of the program, the student will be engaged in an occupation in marketing, merchandising goods or services. These occupations may be found in various business establishments--including without being limited to--retailing, wholesaling, manufacturing, storing, transporting, financing, and similar enterprises.

The DE class locally is a part of the public school system and operates through high schools and junior colleges. It is NOT a program separate from the regular school curriculum.

DE For the Student Who Plans On Entering College

DE students meet the graduation requirements and do receive a high school diploma. DE credits are accepted by most colleges and universities as elective credits. DE students entering college can profitably pursue careers in marketing, management, personnel, salesmanship, advertising, insurance, private business, and many other related occupations.

A Typical Day for a DE Co-op Student

MORNING----3 or 4 class periods in regular in-school subjects, one of which is the related DE class where the student studies the following:

* Factors affecting marketing, including research, advertising, merchandising, location, customer services, government regulations
* Various financial aspects of distribution, including structure, credit and records
* Place of the consumer in the marketing process.

AFTERNOONS----"on-the-job" training.

The DE student spends an average of 15 hours a week under a "training plan" in a distributive occupation. He secures practical training and experience through actual employment in a business establishment under the supervision of the DE coordinator and a training sponsor appointed by his employer. The job is actually an extension of the "in-class" program, for which the student receives the going rate of pay plus school credit.

Benefits of "On-The-Job" Training

In many cases, the student after graduation, who has been DE trained, has an opportunity to become a full-time employee where he has received his "on-the-job" training. Considering that today a high percentage of the graduates become distributive employees, the DE student has a distinct advantage.

The DE Employer

The local businessmen in your community are willing and anxious to cooperate with the distributive education program. Many of you know your local businessmen and their families. They live in your community and take an active part in community affairs. They are anxious to have the community be one in which they are proud to rear their families. Their distribution facilities operate in the community and are an intimate part of the environment in which the people work, live, play, and worship. These are the men who offer "on-the-job" training to the DE student.

What Is The Future In Distribution

The distributive future is dynamic. Facilities have grown faster than the population with the tremendous expansion of all types of marketing organizations.

****

TO THE PARENTS OF _____ HIGH SCHOOL SOPHOMORES

The _____ Chamber of Commerce would like to bring to your attention a program at _____ High School offered to juniors and seniors --- known as Distributive Education.

There have been many men in the mercantile world who have started in a haphazard accidental, disorganized way. The Chamber of Commerce has an interest in common with the business education (or vocational) department of _____ High School -- we want to inform the parents of young men and women of high school age that marketing, merchandising, and distributive activities require more than the accidental applicant, and that it provides more prosperity then many people realize.

DISTRIBUTIVE EDUCATION is a program of occupational training. It is intended for young men and women who want a career in a distributive field and who can meet the qualifications set up for entrance into the program. D.E., as it is commonly referred to, is a combination of two kinds of schooling -- high school and the school of experience. A D.E. student begins the program in the junior year with one class each semester. A D.E. trainee in the senior year spends the morning in school carrying a basic school program and spends the afternoon under the supervision of local stores selected as training establishments.

DISTRIBUTIVE EDUCATION combines the best in high school education with the best in business training to enable our young people to become better workers, better citizens, and better persons. This program brings the business world into the classroom and the classroom into the business world -- to bridge the gap between theory and actual practice. This is a nation-wide program open to all students interested in obtaining a saleable skill in retailing, wholesaling, or a service occupation. A student enrolled in Distributive Education may gain full credit for entrance into most colleges if he is interested in pursuing a degree in business administration.

FACTS ABOUT DISTRIBUTIVE EDUCATION

PERIOD OF EMPLOYMENT: A student will be hired by the business firm that is participating with the Distributive Education program for the entire school year.

HOURS AND WAGES: A student enrolled in the Distributive Education program must work a minimum of 15 hours a week, half of which must be during regular school time. The wage received for his or her on-the-job instruction at this firm is arrived at by the employer and the student, and is in compliance with federal and state wage regulations.

SUPERVISION: The Distributive Education program is a school organized and supervised program. Each Distributive Education student will work under the direct supervision of a store sponsor and teacher-coordinator will make periodical visits to each business establishment to observe student progress.

ON-THE-JOB INSTRUCTION: All students will be working in carefully selected business establishments that will serve as training stations to the Distri-

butive Education program. Each student upon entering the program, will have the opportunity to select, as nearly as possible, the type of business he desires to be trained in. While working for this firm as a Distributive Education student, he will be trained in various phases of that particular business operation.

CLASSROOM INSTRUCTION: D.E. classes provide the in-school segment of the Distributive Education program. In the junior year, this class meets one period each day during which time a wide variety of business subjects are studied. This is a pre-employment training class that orients the D.E. student to the academic discipline of distribution. The basic areas covered are: marketing, salesmanship, retailing, business organization and management display, merchandising, and advertising. During the senior year, individual instruction is given in the D.E. class to each student that relates directly to the area in which he or she is employed.

CREDITS EARNED: A Distributive Education student receives four units of credit (one per semester during the junior and senior year) for his D.E. classes and two units of credit for his on-the-job instruction work experience (one each semester of the senior year). For his total school program, he receives the same credit as other students.

JUNIOR YEAR
D.E. CLASSES (2 credits)
D.E. 1 and D.E. 2

-Orientation to D.E.
-Store Services
-Salesmanship
-Advertising
-Display
-Personality Development
-Job Analysis
--Credit and Finance
-Store Organization
-Management
-Economic Concepts

SENIOR YEAR
D.E. CLASSES (2 credits)
D.E. 3 and D.E. 4

-Individual Related instruction

SENIOR YEAR
ON-THE-JOB INSTRUCTION (2 credits)
in local firms

(Supervised Instruction)
D.E. 5 and D.E. 6

-Merchandise Information
-Retailing
-Buying and Pricing
-Learns to work with and for people
-Experiences accepting responsibility
-Develops personality and poise
-Opportunity for full time employment
-Job rotation in actual situations
-May use earnings to help finance further education

Very soon now the guidance counselors will be discussing 11th grade programs with sophomores. If your son or daughter has an interest in the vocation of marketing, merchandising, or distribution or in any of the related fields such as advertising, display, personnel work, buying, -- encourage him to ask questions of the counselor about Distributive Education during his conference. Learn how D.E. provides an excellent terminal education or fits into a background for a college course in marketing or business administration.

If you would like more information about the program, call_____ High School, Phone _____, and ask for_____, Coordinator of the Distributive Education program

Sincerely,

Secretary , Chamber of Commerce

NEWSLETTER

To all Distributive Education Student Employer's:

The purpose of this newsletter is threefold. First, I would like to express my appreciation for your wonderful cooperation with the D.E. Program. You are the vital link between theory in the classroom and practice from on-the-job experience.

Second, there has been a growing feeling in the community that the D.E. Program includes only the school and the work station. One vital link has been left out--Distributive Education Clubs of America activities. The most efficient combination would be a one-third relationship between the school, work, and club activities.

Third, I would like to express the purposes of DECA so you may judge the worthiness of our complete program. D.E. students have common objectives and interests. Each is studying for a specific career objective in marketing and distribution. Club activities have a powerful, psychological effect upon the attitudes of students and, for many, DECA is the only opportunity which they have to participate in social activities of the school and to develop knowledge of the responsibilities of citizenship.

DECA Chapters are to DE class members what a civic or professional organization is to a group of businessmen. Chapter activities are recognized as a part of the total educational program because of their development of leadership ability, professional attitudes, better citizenship characteristics, and social growth of the individual. DECA Chapter activities are always centered in the school. These Chapter activities serve the teacher-coordinator as a teaching tool by creating interest in all phases of marketing and distribution study.

The DECA Chapter is the showcase for student achievement and progress. Through its activities, students with an interest in marketing and distribution are attracted to the DE Program. No set pattern of operation is prescribed for any local Chapter; however, the majority plan activities which include social, civic, professional, and benevolent activities and adopt projects which provide for school and community betterment.

Finally, DECA activities teach the members to serve as leaders and followers.

Sincerely yours,

D.E. Coordinator

FOR
STATE REPORTING FORMS

Form D.E. - 1 - Agreement for Reimbursement in
in Vocational Distributive Education

Three copies of this form are due in the State Vocational Office on October 1 and April 1. Reimbursement for the time devoted to vocational D.E. activities by the D.E. teacher coordinator (project-method, related instruction, coordination) and the coordinator's extended contract are reported on this form. The total salary on the back of the form must agree with the salary reported during the fiscal year, July 1 - June 30, in (1) on the front of the form. The schedule of the coordinator must be shown with those periods circled for which reimbursement is claimed. Please pay particular attention to statements 1 through 6 on the back of the form when signing this Agreement. The approved TOTAL VOCATIONAL SALARY on the April 1 report is to be reported in the appropriate column on the Distributive Education section of FORM E at the end of the fiscal year.

FORM D.E. - 2 - Student Enrollment in either the Cooperative or the Projects-Method Program

Each student enrolled in a Vocational Distributive Education program, either cooperative or projects-method, must indicate a Career Objective which becomes a matter of record by title and Standard Industrial Classification (S.I.C.) number. In reporting enrollment for a projects-method program, only the career objective is necessary on D.E. 2. In reporting enrollment for a cooperative program, it is necessary to complete all columns on the front of D.E. 2 plus the first 5 columns on the back for the October report--- all columns on the back are to be completed for the April report. For cooperative student-trainees, it is not necessary that their Present Employment (job title and D.I.C. number) agree with their Career Objective (job title and S.I.C. number). New programs that are initiating a Plan C program beginning with pre-cooperative in the 11th year (and are not using the projects-method) are to report their junior enrollment by name, sex, and career objective , as a matter of record. All existing cooperative programs are to report enrollment in the 11th year pre-cooperative classes by name, sex, and career objective. Three copies of D.E. 2 are due in the State office on October 1 and April 1.

FOUR copies of FORM D.E.-4 are to be submitted to:

INDIANA VOCATIONAL TECHNICAL COLLEGE
c/o Program Analyst
627-641 Architects and Builders Building
333 N. Pennsylvania
Indianapolis, Indiana

at least TWO WEEKS prior to the first scheduled class meeting. Upon approval of the proposed course by the State Supervisor of Distributive Education, one copy of D.E.-4 will be returned to the school corporation initiating the program, one copy will be retained by the State Division of Vocational Education, one copy will be provided the State Adult D.E. Coordinator, and one copy will be sent to the IVTC. Normally these are evening classes and are conducted on a short-term basis, utilizing the physical facilities of the public school, and the services of professional call-staff personnel. A course outline for the course should be submitted with the report. These short-term courses are financed by a combination of enrollment fees and reimbursement. This form covers a general description of the course and a proposed budget, both of which must be approved in order to receive a reimbursement.

STANDARD INDUSTRIAL CLASSIFICATION for USE in DISTRIBUTIVE EDUCATION

In reporting S.I.C. numbers on FORMS D.E. 2, D.E. 2 (Supplement), or D.E. 5, use only the major classification numbers that are boxed.

STANDARD INDUSTRIAL CLASSIFICATION

for USE in

DISTRIBUTIVE EDUCATION
OE-82013

U.S. Department of Health, Education, and Welfare

Anthony J. Celebrezze, Secretary

Office of Education
Francis Keppel, Commissioner

DIVISION F. WHOLESALE AND RETAIL TRADE

Retail Trade

*/52/ Lumber, Building Materials, Hardware, Farm Equipment

5211-Lumber yards
5212-Building materials dealers
522- Heating, plumbing equipment dealers
523-Paint, glass, wallpaper stores
524-Electrical supply stores
5251-Hardware stores
5252-Farm equipment dealers

/53/ General Merchandise

531--Department stores
Establishments normally employing 25 or more people and engaged in selling some items in each of the following lines of merchandise:

1. Furniture, home furnishings, appliances, radio and TV sets
2. A general line of apparel for the family
3. Household linen and dry goods

An establishment with a total sales of less than $5 million, in which sales of any one of these groupings is greater than 80 percent of total sales, is not classified as a department store.
An establishment with total sales of $5 million or more is classified as a department store even if sales of one of the groups described above is more than 80 percent of total sales, provided that the combined sales of the other two groups is $500,000 or more.

533-Limited price variety store
5392-Dry goods and general merchandise stores
Establishments which meet the criteria for department stores, but have fewer than 25 employees.
5393-General stores
Establishments primarily selling a general line of merchandise of which the most important line is food, and the most important subsidiary lines are notions, apparel, farm supplies, and gasoline. (Usually known as a country general store)

/54/ Food

541-Supermarkets, grocery stores, delicatessen stores
5422- Meat markets
5423-Fish markets
543- Fruit store, vegetable market
544-Candy, nut, confectionery stores
545- Dairy products store
5462-Retail bakeries-manufacturing (some or all of products baked on premises)
5463-Retail bakeries-non-manufacturing(do not bake any products they sell)
5491-Egg and Poultry Dealers (limited line of groceries frequently carried)
5499-Other-specialized lines, e.g., coffee, spice, health foods

* Numbers boxed are those used in annual report form.

/55/ Automotive Dealers and Gasoline Service Stations

551-Passenger car dealers, franchised
552-Passenger car dealers, non-franchised
553-Tire, battery, accessory dealers
559-Aircraft, boat, motorcycle dealers, others

/554/ Gasoline Service Stations

/56/ Apparel and Accessories

561- Men's, boys' clothing stores
562-Women's ready to wear stores
5631-Millinery Stores
5632-Lingerie Stores
5633 Hosiery Stores
5634-Other specialty stores (women's)
564-Children, infants' wear stores
565-Family clothing stores
5662-Men's shoe stores
5663-Women's shoe stores
5664-Childrens shoe stores
5665-Family shoe stores
567-Custom tailors
568-Furriers, fur shops
569- Miscellaneous apparel

/57/ Furniture, Home Furnishings, and Equipment

5712-Furniture stores
5713-Floor covering stores
5714-Drapery, curtain, upholstery stores
5715-China, glassware, metalware stores
5719-Miscellaneous home furnishings stores (specialized lines--lamps, blinds and window shades, picture frames, etc.)
572-Household appliance stores
5732-Radio and television stores
5733-Record shops, musical instrument stores

/58/ Eating and Drinking Places

Note: Unless food services are operated as leased departments, restaurants, and lunch counters operated by hotels, for example, are classified in Group 70 and by department stores in Group 53.

5812-Restaurants, cafeterias, caterers, railroad dining-cars
5813-Drinking places

/59/ Other Retail Stores

/591/ Drugstores

592-Liquor stores
593-Secondhand stores, antique shops
5942-Book stores
5943-Stationery stores
5952-Sporting goods stores
5953-Bicycle shops
5962-Hay, grain, feed stores
5969-Other farm supply stores garden stores
597-Jewelry stores
5982-Coal and wood dealers
5983-Fuel oil dealers, liquified petroleum(LP) gas dealers
5984-Ice dealers
5992-Florists
5993-Cigar stores, stands
5994-News dealers, news stands
5996-Camera, photographic supply stores
5997-Gift, novelty, souvenier shops
5998-Optical goods stores
5999-Typewriter, luggage, hobby toy, religious goods stores, pet shops; other

Nonstore Retailers

/532/ Mail-order houses

/534/ Merchandise vending machine operators

/535/ Direct selling (house-to-house) organizations

Wholesale Trade

/501/ Motor Vehicles, Automotive Equipment

5012-Automobiles, other motor vehicles
5013-Automotive equipment
5014 - Tires and tubes

/502/ Drugs, Chemicals, Allied Products

5022-Drugs, drug proprietaries, druggists' sundries
5028-Paints, varnishes
5029-Other chemicals, allied products

/503/ Dry Goods, Apparel

5032-Dry goods, piece goods, notions
5035-Apparel and accessories, hosiery and lingerie
5039-Footwear

/504/ Groceries and Related Products

5042-Groceries, general line
5043-Dairy products
5044-Poultry, poultry products
5045-Confectionery
5046-Fish, sea foods
5047-Meat, meat products
5048-Fresh fruits, fresh vegetables
5049-Other groceries and related products

/505/ Farm Products--Raw Materials

Establishments primarily engaged in wholesale distribution of farm products raw materials, most of which are used in manufacturing industries

/506/ Electrical Goods

5062-Electrical merchandise, general line
5063-Electrical apparatus and equipment, wiring supplies, construction materials
5064-Electrical appliances, television, radio sets
5065-Electronic parts, equipment

/507/ Hardware; Plumbing and Heating Equipment and Supplies

5072- Hardware
5074-Plumbing and heating equipment, supplies
5077-Air conditioning equipment, refrigeration, supplies

/508/ Machinery, Equipment, Supplies

5082-Commercial and industrial machinery, equipment, supplies
5083-Farm machinery and equipment
5086-Professional equipment, supplies
5087-Service-establishment equipment, supplies
5088-Transportation equipment, supplies, (except motor vehicle supplies)

/509/ Miscellaneous Wholesale

5091-Metals, minerals
5092-Petroleum bulk stations, terminal
5093-Scrap and waste materials
5094-Tobacco, tobacco products
5095-Beer, wine, alcoholic beverages
5096-Paper, paper products
5097-Furniture, home furnishings
5098-Lumber, construction materials
5099-Other, e.g., farm supplies, jewelry, flowers, and nursery stock

DIVISION H. SERVICES

/70/ Hotels, Camps, and Other Lodging Places

7011- Hotels-year round
7012-Seasonal hotels
7013-Motels and tourist courts
702-Rooming and boarding houses
7031-Trailer parks
7032-Sporting and recreational camps
704-Other, e.g.,lodging houses on membership basis

/72/ Personal Services

7211-Power laundries, family and commercial
7212-Laundries, except power and self-services
7213-Industrial launderers, linen supply
7214- Diaper service
7215-Self-service laundries
7216-Cleaning, dyeing plants
7221-Photographic studios
7231-Beauty shops
7241-Barber shops
7251-Shoe repair shops, shoe shine parlors, hat cleaning shops
7261-Funeral services, crematories
7271-Cleaning, pressing shops, (valet shops), garment repair
7272-Fur repair, storage
7299-Other miscellaneous personal services; e.g.,porter service, clothing rental

/73/ Business Services

7311-Advertising agencies
7312-Outdoor advertising services
7319-Miscellaneous advertising; e.g., shopping news service
7321-Mercantile and consumer credit reporting agencies; adjustment and collection agencies
7331-Duplicating, addressing, mailing mailing list, stenographic services
7332-Blueprinting, photocopying services
7341-Window cleaning
7342-Disinfecting, exterminating services
7349-Miscellaneous services to dwellings, other buildings
7351-News syndicates
7361-Private employment agencies
7391-Research, development, testing laboratories
7392-Business and management consulting services
7399-Other miscellaneous business services;e.g., telephone answering, equipment rental, sign painting shops, interior decorating

/75/ Automobile Repair, Automobile Services, Garage

(Auto repair departments maintained by establishments engaged in the sale of new automobiles are classified as Retail Trade.)

7511-Automobile, truck rentals, without drivers
7521-Parking lots
7522-Parking structures
7531-Top, body repair shops
7535-Paint Shops
7536-Glass replacement, repair shops
7538-General automobile repair
7539-Automobile repair shops not elsewhere listed
7541-Automobile services, except repair; e.g., washing, towing

/76/ Miscellaneous Repair Services

Note: Repair departments in retail stores are not included in the repair classification unless operated as leased departments.

762-Electrical repair shops
763-Watch, clock, and jewelry repair
764-Reupholstery and furniture repair
769-Other repair services

/76/ Motion pictures

781-Motion picture production and distribution
782-Motion picture service industries
783-Motion picture theaters, drive-in theaters

/79/ Amusement and Recreation Service (partial listing)

656-Operative builders

DIVISION D. MANUFACTURING

Note: Include enrollees who are employed by a manufacturing establishment who perform a distributive function or occupation.

For example:

202-Dairy products
205-Bakery products

Establishments processing products for home service delivery are included in Division D.

363-Household Appliances
Company Sales Representatives

FORM D.E.- TR - 6 - Travel Expense Claim

Only those schools with approved D.E. programs will be reimbursed for the D.E. coordinator's travel and/or per diem. Travel and per diem are reimbursed in accordance with State regulations - 8¢ per mile, $10.00 per diem ($2.50 per quarter) in-state, $14.00 per diem ($3.50 per quarter) out-of-state. Requests for travel and per diem to attend out-of-state professional meetings must be submitted to the State Supervisor of Vocational Distributive Education for prior approval. Local travel for coordination and supervision is reimbursed at the rate of 50% (no per diem is allowed) - state-called meetings are reimbursed at the rate of 100% for travel and/or per diem. All housing receipts and registration fee receipts must be attached to one copy of the travel claim.

To be reimbursed for the D.E. coordinator's travel and/or per diem, all claims must be submitted to the State Office on FORM D.E. - TR - 6 by the 15th of the month following travel (i.e., all travel for coordination, state-called meetings, or approved out-of-state meetings in September must be reported by October 15, etc.).

One approved copy of the D.E.-TR-6 will be returned to the school corporation. The amount of approved travel and per-diem on record is to be reported in the appropriate column on the Distributive Education section of the FORM E report at the end of the fiscal year.

D.E. 746 - Request for Approval of Anticipated Purchase of Equipment Under the 1963 Vocational Education Act

Form DE 746 is to be used for requesting approval of anticipated purchases of equipment for Vocational Distributive Education under the 1963 Vocational Education Act. The school corporation seeking reimbursement for equipment purchases, first, must have an approved Vocational Distributive Education program, either Part-Time Cooperative or Preparatory Non-Cooperative, in accordance with the Indiana State Plan for Vocational and Technical Education. Reimbursement is at the rate of 50% Federal funds with matching state and/or local funds.

PROCEDURE

The following procedure will be followed in reimbursing equipment purchases by local school corporations through the State Vocational Office:

1. Have an approved Vocational Distributive Education program

2. Submit 2 copies of Form DE 746 to the State Office, listing anticipated purchases (see SPECIFIC section). Please omit brand names on the anticipated purchase request.

3. After receiving approval by the State Office, accept bids locally (if amount of the purchase order requires bids), and issue purchase orders.

4. Submit the purchase orders to the State Office

5. The items of equipment and dollar amount of the purchase order will be checked against the original, approved request for the anticipated purchase of equipment.

6. A voucher then will be issued to the school corporation on the basis of the purchase orders not to exceed 50% of the original total dollar request.

7. After the equipment has been purchased, the paid invoices are to be submitted to the State office at the end of the regular year: (DEC. 31)

Equipment for instruction in the reimbursable Vocational Distributive Education program shall mean durable equipment that is necessary for, and used directly in, the instructional process, rather than equipment that is merely accessory and subordinate to the instructional process. The equipment is to remain in the DE work laboratory.

Furniture, fixtures, and equipment that might be used in any classroom are not reimbursable.

Equipment used for administrative purposes is not reimbursable.

D.E. FORM V-52 SUPPLEMENT - Request for Evaluation of Credentials Related to Vocational Education in Distribution and Marketing

One of the requirements in the certification pattern for a D.E. teacher coordinator is 2 years successful full time employment in a distributive occupation, or 1500 clock hours of supervised work experience in the distributive field under an approved teacher-training program, or a combination of both. This occupational experience is to be reported on D.E. form V-52. Non-conventional certification (for instructors in post-high and adult evening programs) requires 3 years successful full time employment.

For an evaluation of credentials, please submit information according to the following procedure: (In-state applicant only)

1. Fill out two copies of Form V-52 complete with required signatures. (The Teacher Trainer signature is necessary for those applying for Non-Conventional certification-this signature is not necessary for those applying for conventional certification which requires an official transcript.)
2. Provide official transcripts of all college and/or university courses which have been acquired by the applicant if conventional certification is requested.
3. Send the two completed copies of Form V-52 and all official transcripts (if required) to the State Supervisor of Vocational Distributive Education.

DO NOT SEND MONEY TO THIS OFFICE

In the event there are deficiencies in Occupational Experience and/or academic requirements, recommendations will be made to satisfy the necessary additional requirements in order to comply with the certification pattern as set forth in the INDIANA STATE PLAN FOR VOCATIONAL AND TECHNICAL EDUCATION and BULLETIN 400 of the DIVISION OF TEACHER EDUCATION AND CERTIFICATION.

If there are no deficiencies, the approved credentials will be returned and the procedure for applying for certification to the Division of Teacher Education and Certification will be explained at that time. The teacher-coordinator's certificate will be issued only by the Division of Teacher Education and Certification.

GLOSSARY

GLOSSARY

BASIC JOB CURRICULUMS	-Types of preparatory curriculums which emphasize fundamental techniques in sales and sales-supporting services; and essential marketing concepts, qualifying social competencies, and basic skills in computations and communications; available to prepare enrollees for the elementary or basic level distributive occupations, involving minimal employment responsibility.
Career Development Job Curriculums	-Types of preparatory curriculums which emphasize the functions of marketing, merchandising, and management within the discipline of distribution; available to prepare students for the career development job level, which involves competencies and responsibilities beyond those required for the basic job level and less advanced than those needed by a specialist in distribution
Club Activities	-Activities of the Distributive Education Clubs of America which provide opportunities to demonstrate and to refine the competencies required in employment; they supplement and enrich the cooperative method and the project method in achieving vocational application
Combination Plan	-Organizational pattern for preparatory instruction which combines the cooperative plan, involving regularly scheduled part-time employment, and the project plan, focusing on individually selected activities, both of which relate to career goals.
Competency Areas of Instruction	-Classification of the preparatory curriculum into areas of study identified with the competencies needed in distributive employment; areas are competency in marketing, the discipline; competency in technology; competency in social skills; competency in basic skills; and competency in economic concepts.
Cooperative Method	-Coordination of classroom instruction with on-the-job instruction and application
Cooperative Plan	-Organizational pattern for preparatory instruction which involves regularly scheduled part-time employment that gives students an opportunity to experience theory in practice while developing competencies through training on a job related to their career goals.
Cooperative Training	-Learning experiences encountered in on-the-job instruction and application during regular part-time employment.

Distribution	-The second step in a series of economic processes which bring goods and services from those who make them to those who use them; includes all the methods by which goods are sent from producers to consumers; may be used synonymously with marketing.
Distributive Education	-A program of vocational instruction in marketing and distribution designed to qualify those enrolled for gainful employment in distributive occupations or in occupations in which a distributive function appears, according to their individual career goals; includes preparatory and supplementary programs.
Distributive Occupation	-An occupation that is followed by proprietors, managers, or employees engaged primarily in marketing or merchandising of goods or services. These occupations are commonly found in various business establishments, such as retailing, wholesaling, manufacturing, storing, transporting, financing, and risk bearing.
Marketing	-The performance of business activities directed toward and incident to the flow of goods and service from producer to consumer or user
Occupational Objective	-Distributive occupation selected by a student as his career goal, based on the Standard Industrial Classification and determined through vocational guidance counselling involving teacher-coordinator and guidance department: may be broadly tentative or specifically committed.
Participation Activities	-Learning experiences which focus on employment activities and decision-making situations typical of specific occupational objectives; they include cooperative training, project training, teaching techniques utilizing student participation, and activities of the Distributive Education Clubs of America.
Preparatory Instruction	-Vocational Education in marketing and distribution provided in preparatory programs on a full-time basis to prepare youth and adults over fourteen years of age for a distributive occupation which has been selected by the student as his occupational objective; curriculums for preparatory instruction include basic job curriculums, career development, job curriculums, and specialist job curriculums; may be organized following a cooperative plan, a project plan, or a combination plan.

Preparatory Program	-A plan of instruction provided on a full-time basis to prepare youth and adults over fourteen years of age for a distributive occupation which has been selected by the student as his occupational objective
Project	-A significant practical unit of activity having educational value and aimed at one or more definite goals of understanding; used to describe any non-cooperative, organized learning activity that has a definite objective to be accomplished in a specified length of time.
Project method	-Coordination of classroom instruction with a series of individually selected activities or projects related to students' occupational objectives.
Project Plan	-Organizational pattern for preparatory instruction in which a series of individually selected activities gives students an opportunity to experience theory in practice while developing competencies through assignments related to their career goals
Project Plan	-Organizational pattern for preparatory instruction in which a series of individually selected activities gives students an opportunity to experience theory in practice while developing competencies through assignments related to their career goals
Project Training	-Learning experiences involved in carrying out individually selected assignments or projects.
Specialist Job Curriculums	-Types of preparatory curriculums which emphasize specific functions, product areas or service fields at mid-levels of employment responsibility; available to prepare students for distributive specializations in functions, product areas, or service fields.
Supplementary Instruction	-Vocational education in marketing and distribution provided in supplementary programs on a part-time basis for adults wishing to refresh and update competencies needed in their employment and for those seeking new and specialized competencies necessary to continue employment or advancement in responsibility; includes the curriculums of updating adult training and specialized adult programs; offered in short-term units and in certificate curriculums for employed adults who attend day or evening classes on a part-time schedule.

Supplementary Program	-A plan of instruction available on a part-time basis to adults wishing to refresh and update competencies needed in their employment and for those seeking new and specialized competencies necessary to continuing employment or advancement in responsibility
Teacher-Coordinator	-Distributive education teacher who is responsible for the operation of a preparatory program, involving vocational guidance and counselling; public relations; curriculum planning and organization; classroom instruction; and application of instruction to employment requirements through the cooperative method or the project method.
Teaching Techniques Utilizing Student Participation	-Teaching techniques focusing student involvement which supplement the cooperative method and the project method in providing vocational application; they include directed observation; the incident process or case studies; discussion techniques such as conference discussion, panel discussion, buzz sessions, and brainstorming; practice techniques, such as role playing; and independent study, such as programmed instruction.

OUTLINE FOR A LOCAL PLAN
in
VOCATIONAL DISTRIBUTIVE EDUCATION

Each school desiring to participate in a Vocational Distributive Education program approved for reimbursement by the Division of Vocational and Technical Education shall submit a local plan for its program

The local plan is to be a written plan, developed cooperatively as a working agreement between the local school corporation and the Division of Vocational and Technical Education. The local plan, when approved, becomes a contractual agreement and an instrument to be used in evaluating the program and should be signed by responsible officials.

> Note To Developer Of Local Plan: Not all of the items in the following outline are applicable to every plan for instructional programs. Disregard those that may not be applicable and be sure to include all that are applicable.

The LOCAL PLAN shall include:

I. CHARACTERISTICS OF PROGRAM

1. Type of program

   Designate type of program -- i.e., regular high school, post high school (junior or community college, one-and two-year terminal programs in colleges and universities, 13th and 14th year of high school) adult evening school, area vocational school, or persons with special needs.

2. Purposes and objectives

   Describe the general purposes and objectives of the proposed curriculum or offering

3. Identify the types or categories of students who will be accomodated by the proposed program of study such as:
   a. Youth in high school-Grade level
   b. Persons who have completed or left high school and who are available for full-time study
   c. Persons who have already entered the labor market and who need training or retraining
   d. Persons who have academic, socioeconomic, or other handicaps that prevent them from succeeding in regular vocational education programs

II. EVIDENCES OF NEED FOR THE PROPOSED PROGRAM

1. State and explain justification of proposed program, based on local community survey or documented report from local office of the Indiana Employment Security Division.

III. PROVISIONS FOR SUPERVISION AND ADMINISTRATION OF THE PROGRAM

1. Personnel involved
2. Line and staff responsibilities of personnel shown by an organizational chart
3. Duties and responsibilities applicable to personnel. Indicate provisions for extended contract time prior to and subsequent to the regular school year.
   a. Preparatory teachers
   b. Teacher-Coordinators
4. Qualifications of Personnel-Academic and Occupational
   a. Preparatory Teachers
   b. Teacher-Coordinators
   c. Adult Programs
5. Provisions for attendance of Teacher-Coordinator at state-called workshops and other professional meetings
6. Reimbursement for travel expenses of Teacher-Coordinator
   a. In city
   b. Out-of-town

IV. PROGRAM OF INSTRUCTION

1. On-the-job Training
   a. Plan A,B, or C as outlined by the State Plan
   b. Content of general related instruction
   c. Provisions for individual instruction
   d. Instruction based on occupational needs
   e. Criteria for selection of training stations
   f. Recommended employment schedule of trainees
   g. The training station agreement
   h. Procedure for a well-rounded program

2. Project-Methods Training
   a. Plan D, E, or F as outlined by the State Plan
   b. Course description
   c. A description of the classroom laboratory, including equipment, facilities, and supplies
   d. The time allotment or schedule
   e. The projects and experiences to be used for occupational preparation
   f. The provision for instructional materials

3. The adult program
   a. Provisions for supervision and coordination
   b. Provisions for instruction
   c. Provisions for courses or other educational experiences

4. Programs for youth and adults with special needs
   a. Groups to be served
   b. Types of programs
   c. Provisions for instruction
   d. Provisions for courses or other educational experiences

V. ENROLLMENT IN THE PROGRAM
1. Who may enroll
2. Selection procedures
3. Prerequisites

VI. PROVISIONS FOR LOCAL CLUB PROGRAM
1. Sponsor
2. Participation at regional, state, and national level

VII. PROVISIONS FOR LOCAL ADVISORY COMMITTEE
1. Members
2. Selection and appointment
3. Duties and responsibilities

VIII. PROVISIONS FOR SURVEYS AND FOLLOW UP STUDIES
1. Who conducts the survey
2. Purpose

IX. PROCEDURES FOR LOCAL EVALUATION
1. Classroom instruction
2. On-the-job performance
3. Services available through local guidance department

X. REPORTS AND FORMS
1. Describe provisions for periodic statistical and descriptive reports of activities by the coordinator to the administration and the state supervisors
2. Submit one copy each of the various forms used by the local school for the operation of the program such as student application form for admittance to the program, evaluation forms, training agreement, schedule of on-the-job training experiences, and survey forms.

Submit the Local Plan for a Vocational Distributive Education program together with exhibits, to:

*VOCATIONAL AGRICULTURE; *PROGRAM PLANNING; *EDUCATIONAL OBJECTIVES; *GUIDELINES; *STATE PROGRAMS
OHIO

After completion of a 5-year program plan, the state's vocational agriculture teachers and state staff members agreed that another 5-year program plan should be developed. Teachers submitted suggestions compiled and reviewed by the state staff, for revision of guiding statements and goals. This publication lists guiding statements and objectives under the following broad headings: (1) planning and developing local programs, (2) local school relationships, (3) high school teaching and curriculum, (4) supervising occupational experience in agriculture, (5) advising the Future Farmers of America, (6) guidance, (7) young and adult farmer program, (8) physical facilities, (9) public relations, and (10) professional improvements. State goals were established for each objective and space provided for the establishment of local district goals. (JM)

VOCATIONAL AGRICULTURE IN THE NEXT FIVE YEARS

Ohio Vocational Agriculture teachers and staff members cooperatively planned their first state five year program in 1958. At the conclusion of the first five years in 1963, it was felt by the staff and the Executive Committee of The Ohio Vocational Agriculture Teachers Association that many benefits had been derived from the direction provided through this plan and that another for the ensuing five years should be developed. In preparation for this new program teachers were asked, during district meetings in the fall of 1962, to revise guiding statements and goals for the program for the coming five years. By January 1, 1963, the suggestions from all districts had been compiled and reviewed by members of joint staff of teacher education and supervision.

This publication contains a list of these goals for each area of the vocational agriculture program.

This statement of goals should be regarded as only one of several desirable instruments in planning local programs in vocational agriculture. It should supplement rather than supplant evaluation of local programs, long time plans, appraisal of community resources, and involvement of lay people in program planning and development.

Our Opportunity

We have a strong force for the improvement of agriculture in Ohio in the energies of 350 teachers, supervisors, and teacher educators wholeheartedly directed to the achievement of these goals. Vocational agriculture has a history of meeting the needs of the times and adapting to changes in Ohio and the Nation. The accomplishments of this can help us to meet our responsibility for providing for every community in which we serve the best possible program of agricultural education.

We have had many well planned vocational agriculture programs through the years. The recent intensive work in this area has been done because we recognize

that sound planning must precede sound programs. During the past year we have identified the major components of a complete program of vocational agriculture as including relationships of school, faculty; program planning; classroom teaching and curriculum; providing occupational experience; adivising the FFA chapter; guidance and counselling; teaching adults and young farmers; providing physical facilities; developing public relations; and planning for professional improvements. For each of these major components we have identified certain goals for which we believe can be met during the next five years. These goals based upon the judgement of teachers and staff are reproduced in this publication.

The goals contained herein should serve as a guide for teachers in planning local programs and also serve as a guide for district chairman and officers of the Ohio Vocational Agriculture Teachers Association in planning professional activities on a district or state basis. For the state supervisory staff and the teacher education staff these goals should serve a similar purpose. The major purpose for all groups is that of giving a sense of direction to those who need to know the direction which we as a profession are taking.

R. J. W. 1/7/63/500

PLANNING AND DEVELOPING LOCAL PROGRAMS

Guiding Statement: The local program of vocational agriculture should meet educational needs in agriculture and should be based upon, and evaluated in terms of, clearly stated objectives. Continuing community study and involvement of those affected by the programs, under the leadership of the teacher, are essential and should result in a written long term department program.

Objectives:	Goals for 1968 % of Teachers of Depts. State Goals	District Goals
1. Conduct annual systematic evaluation of the departmental program. Involve a state staff member at least once every five years.	100	____
2. Utilize lay committees in planning and carrying out the program.	75	____
3. Study and analyze "Facts on Farming" supplemented by local surveys and other similar information as a means of identifying agricultural education needs.	100	____
4. Maintain an up-to-date written long-time departmental program.	100	____
5. Coordinate the local program with those of other departments and agricultural and educational agencies in the area.	100	____

Additional Objectives and Goals:

_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____

LOCAL SCHOOL RELATIONSHIPS

Guiding Statement: Teachers of vocational agriculture should be effective members of their faculties in developing local school programs which offer maximum educational opportunities for the community.

Objectives:	Goals for 1968 % of Teachers of Depts. State Goals	District Goals
1. Assume appropriate responsibilities which contribute to the development of the total school program.	100	____
2. Share in the development of written school policies including those for the vocational agriculture department.	100	____
3. Participate actively in professional organizations.	100	____
4. Contribute to effective relationships among the faculty, school administration and state staff.	100	____
5. Involve specialized professional personnel such as county supervisors, guidance personnel, and curriculum specialists in local programs.	100	____

Additional Objectives and Goals:

_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____

HIGH SCHOOL TEACHING AND CURRICULUM

Guiding Statement: The department should provide high quality teaching and a curriculum which offers maximum educational opportunity for each student to develop competincies in farming and other agricultural occupations. The agricultural curriculum refers to the total educational experience under the direction of the teacher including classroom and shop work, FFA activities, and supervised occupational experiences.

Objectives:	Goals for 1968 % of Teachers or Depts. State Goals	District Goals
1. Teach in a challenging and enthusiastic manner and make practical application of the information taught.	100	____
2. Prepare appropriate written daily lesson plans for each class.	100	____
3. Have students use class notebooks to record important information and plans of practice not included in the record book.	100	____
4. Develop and maintain an adequate and comprehensive departmental library including current books, bulletins, reports, sample specimens, and other teaching aids.	100	____
5. Provide opportunity for students to become self-directing individuals.	100	____
6. Use a formal testing procedure following each unit of instruction.	90	____
7. Plan and continually revise a course of study for each class on the form, "Curriculum for Vocational Agriculture."	100	____
8. Segment the planned course of study for each class on the form, "Daily Teaching Schedule for Vocational Agriculture."	85	____
9. Teach a unit on career opportunities in agriculture.	____	____
Additional Objectives and Goals:		
_____	____	____
_____	____	____

SUPERVISING OCCUPATIONAL EXPERIENCE IN AGRICULTURE

Guiding Statement: Supervised occupational experience for students in vocational agriculture should provide purposeful individualized and group experience in farming and in other agricultural occupations. The nature and extent of experience should progress with the ability of the student, providing for both occupational exploration and proficiency. Effective experience necessitates continuous, cooperative effort on the part of students, parents, employees, and teacher.

Objectives:	Goals for 1968 % of Teachers or Depts. State Goals	District Goals
1. Guide students with farming programs to have an average of at least two production projects per year with a minimum of 20 man work units.	80	____
2. Have students broaden their occupational experience by including appropriate improvement projects and supplementary practices.	100	____
3. Encourage students to conduct continuation projects when desirable.	100	____
4. Visit each high school student at least six times per year.	95	____
5. Arrange for an average of at least 25 on-farm instructional visits per month.	100	____
6. Assist students on placement to secure at least 400 hours of actual supervised work experience. The total hours of experience should extend over at least a 6 month period.	75	____
7. Utilize records of supervised occupational experience in classroom teaching and individual counseling.	85	____
8. Have all students complete the occupational experience selected.	90	____

Additional Objectives and Goals:

_____	____	____
_____	____	____
_____	____	____

ADVISING THE FFA

Guiding Statement: The teacher should advise and guide an active FFA Chapter which provides members with experience necessary for effective leadership and citizenship and develops interest and pride in agriculture.

Objectives:	Goals for 1968 % of Teachers or Depts. State Goals	District Goals
1. Provide opportunity for every member to participate in at least one FFA leadership activity.	100	____
2. Have a written program of activities, including a budget.	100	____
3. Participate in the State Chapter Contest.	100	____
4. Conduct programs which receive Superior ratings in the State Chapter Contest.	75	____
5. Provide a continuous training program for chapter officers and members.	100	____
6. Have chapter officer participation in a county, district, or state officer training program.	100	____
7. Secure a minimum of one donor per chapter to the Ohio FFA Foundation.	70	____
8. Have a State Officer visit each chapter once every three years.	100	____
9. Secure attendance of all FFA members and their parents at the parent and son meeting or banquet each year.	90	____
10. Have the chapter represented and participating in the FFA Camp program each year.	100	____
11. Cooperate with other chapters in at least one altruistic activity each year.	90	____
12. Have delegates at State FFA Convention each year.	100	____
13. Have each chapter participate in three awards activities.	100	____
14. Chapter complet all applications for National Chapter Contest.	50	____

GUIDANCE

Guiding Statement: The teacher should actively participate in the school guidance program. This includes counseling with students individually to help them define problems and secure information needed to make wise decisions.

Objectives:	Goals for 1968 % of Teachers or Depts. State Goals	District Goals
1. Work closely with local and county guidance counselors in developing an effective program of guidance in agriculture.	100	____
2. Hold at least two planned individual conferences sessions in the classroom with each vocational agriculture student.	100	____
3. Conduct an effective counseling program with students, parents, and others concerned.	100	____
4. Attend at least one workshop or class on guidance and counseling techniques over this five year period.	100	____
5. Assist students in locating appropriate jobs and further training opportunities in the field of agriculture.	100	____
6. Provide continuing assistance to former students through the development and use of follow-up records.	75	____
7. Provide prospective students with information concerning vocational agriculture and career opportunities in the field.	100	____
8. Collect an adequate library of occupational information to aid in serving students.	100	____
9. Have an average of 15% of graduates attend the College of Agriculture.	75	____
10. Develop a pre-vo-ag counseling system with 8th grade.	100	____
11. Check cumulative records of all students.	100	____
12. Provide a folder on courses in agriculture for guidance counselors.	100	____
13. Arrange for parents and/or cooperative farmers to attend an agricultural occupation experience meeting.	60	____
14. Develop a file of information on agricultural occupations.	100	____

YOUNG AND ADULT FARMER PROGRAM

Guiding Statement: Every vocational agriculture teacher should provide programs of education in agriculture for post high school persons, and should encourage rural people to further their education by participating in existing agricultural education programs at the local, county or state level. The instruction be based upon the needs of the enrollees, and should contribute to their efficiency in agriculture or provide a better understanding and appreciation of rural life.

Objectives:	Goals for 1968 % of Teachers or Depts. State Goals	District Goals
1. Provide both adult and young farmer programs in departments of vocational agriculture		
a. single teacher departments	50	____
b. multiple teacher departments	80	____
2. Have a chartered young farmer association in every department which offers a young farmer instructional program.	100	____
3. Conduct an organized, coordinated series of instructional meetings dealing with the agricultural education needs of those enrolled.	100	____
4. Provide individual, special interest group, and class instruction on a year-round basis.	100	____
5. Visit all young and adult enrollees at least once each three months.	100	____
6. Identify scholarships and promote attendance in continuing educational programs in agriculture in Ohio.	100	____

Additional Objectives and Goals:

_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____

PHYSICAL FACILITIES

Guiding Statement: Facilities for vocational agriculture should be carefully planned, maintained, and properly utilized to adequately provide the needed instruction in agriculture.

Objectives:	Goals for 1968 % of Teachers or Depts. State Goals	District Goals
1. Provide in every school adequate classroom and shop facilities in accordance with the bulletin "Facilities for Vocational Agriculture."	100	____
2. Have a planned procedure for maintaining classroom and shop facilities.	100	____
3. Provide an adequate annual budget for supplies, books, equipment, tools, visual aids, etc., as suggested on the recommended lists.	100	____
4. Maintain the standard Agdex filing system.	100	____
5. Develop land laboratories (including greenhouses and related adjuncts) in departments as needed.	100	____
6. Use the safety color code on shop facilities and equipment.	100	____
7. Develop in students and teachers pride in their school facilities and a desire to improve them.	100	____

Additional Objectives and Goals:

_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____
_____	____	____

PUBLIC RELATIONS

Guiding Statement: Public understanding and desirable attitudes toward the program of vocational agriculture should be achieved through cooperative efforts of teachers, administrators and the state staff.

Objectives:	Goals for 1968 % of Teachers or Depts. State Goals	District Goals
1. Provide farm and civic organizations with programs which explain vocational agriculture purpose and programs.	60	___
2. Exhibit at local and county fairs.	100	___
3. Exhibit at Ohio State Fair.	65	___
4. Present six or more radio programs of public interest.	80	___
5. Publish 36 or more news articles each year.	60	___
6. Present at least four television programs annually.	25	___

Additional Objectives and Goals:

_____	___	___
_____	___	___
_____	___	___
_____	___	___
_____	___	___
_____	___	___
_____	___	___
_____	___	___
_____	___	___
_____	___	___
_____	___	___
_____	___	___

PROFESSIONAL IMPROVEMENT

Guiding Statement: Teachers of vocational agriculture should continue to grow professionally through participation in individual and group programs of professional improvement, exemplification of high ethical standards and leadership in professional organizations.

Objectives:	Goals for 1968 % of Teachers or Depts. State Goals	District Goals
1. Assume appropriate responsibilities for the improvement of co-workers and the profession.	100	____
2. Develop a personal program for professional improvement.	100	____
3. Participate regularly in selected non-credit technical and professional offerings.	100	____
4. Attain a Master's Degree or its equivalent with ten years of service.	60	____
5. Enroll in college credit courses at least once in five years.	90	____
6. Recruit an adequate supply of high caliber prospective teachers by having each department enroll an average of one student in Agricultural Education.	100	____

Additional Objectives and Goals:

VT 001 692
Handbook for Home Economics Teachers.

Milwaukee Public Schools, Wis.
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 65 45p.

MANAGEMENT; SCHOOL SAFETY; *HOME ECONOMICS EDUCATION; *HIGH SCHOOLS; *PROGRAM ADMINISTRATION; *ADMINISTRATIVE POLICIES; *MANUALS

This handbook was written for teachers and personnel involved in management of a home economics department. It wasfounded on the belief that effective management contributes to the basic purpose of the home economics education--the achievement of well-being in personal and family life. The handbook contains basic information on policies and procedures as well as general guidelines for effective department management. Hopefully the information will facilitate and strengthen communications among teachers and administrative personnel. The document contains a chart and philosophy of management for the teacher and department chairman. The chapters emphasize: (1) safety in the classroom, (2) opening and closing the department, (3) maintaining department facilities, and (4) managing department business. The appendixes contain sample requisition forms, etc. (MS)

PREFACE

This handbook, as originally written and now revised, is addressed to teachers and administrative personnel involved in the management of a home economics department.

The information in the handbook has been compiled and organized in the belief that effective management contributes to the basic purpose of home economics education -- the achievement of well-being in personal and family life. In addition to the general guidelines for effective department management, the handbook contains basic information on policies and procedures which are used to obtain instructional materials and services necessary to the home economics educational program in the Milwaukee Public Schools. Since situations vary, teachers are encouraged to adapt and supplement this information to best meet the needs represented in the local school.

It is hoped that the information in the handbook will facilitate and strengthen the communication among teachers and administrative personnel. Every teacher, whether new or experienced, may use the handbook as an aid for improving and enriching the home economics program.

PHILOSOPHY OF MANAGEMENT

Management is a process whereby one plans, controls, and evaluates the use of resources to achieve goals. Success in achieving goals is more rapid if the functions of each step in the management process are recognized. Gross and Crandall illustrate what management is through the use of the following diagram.*

This same concept of management can be applied to the home economics department when resources are used to attain educational objectives. The teacher assumes the managerial role as she creates an environment that promotes effective learning. The application of the managerial process puts into effect one of the major concepts included in home economics education.

---

* Gross & Crandall. MANAGEMENT FOR MODERN FAMILIES, page 6. New York: Appleton-Century-Crofts, Inc., 1963.

THE ROLE OF THE TEACHER

The role of the teacher in home economics cannot be overemphasized. The professional qualities as well as personal attributes, habits, and appearance of the home economics teacher reflect her own feelings and influence the attitudes of others toward home economics.

Every teacher needs to accept the responsibilities and obligations identified with being a professional person in the field of teaching. A brief description is given of some of the general competencies which may be considered fundamental in the role of an effective home economics teacher.

- Shows a genuine interest in people and their welfare.
- Recognizes and understands the implications which social and technological changes have for family living.
- Interprets the home economics program with an approach based upon a sound philosophy of education.
- Builds curricula and helps to establish conditions under which students can develop their potentialities.
- Presents a poised, well-groomed appearance.
- Displays maturity in thought and action.
- Exemplifies high ideals in personal actions and habits.
- Believes in and practices good human relations with students, other teachers, school administrators, and with other people in the community.
- Manages resources in order to achieve a balance between her professional and personal life.
- Continues to self-evaluate her professional efforts.

THE ROLE OF THE DEPARTMENT CHAIRMAN

In each secondary school, one home economics teacher is appointed by the principal to serve as the department chairman, subject to approval by the Superintendent. Such appointments are to be reviewed annually. The chairman has the direct responsibility to the principal and the home economics coordinator in professional and instructional matters related to home economics within the individual school. While the department chairman is directly responsible for effective management of administrative and instructional aspects of the department, these responsibilities will be shared with the other home economics teachers. Good relationships among teachers are enhanced when there is the sharing and extending of mutual help so that each teacher is able to perform to her greatest potential.

The following general functions of a department chairman may serve as guidelines for home economics teachers and chairmen.*

- Through planning conferences and meetings and such other ways as developed with the principal, aids the principal in orienting teachers into the instructional program of the department; gives such assistance to the new teacher as may be possible.

- Plans with the department staff for the use of city-wide curriculum materials such as teaching guides, resource units, content outline, audio-visual listings.

- Works with the department staff in the study and selection of textbooks and supplementary instructional materials consistent with established procedures.

- Works with the department staff in planning the budget and initiating requisitions for instructional supplies and equipment; submits departmental recommendations to the principal.

- Coordinates the use of community resources in the subject area.

- Plans with the department staff, in cooperation with the Director of Guidance, to stimulate student interest in the subject.

---

* Milwaukee Public Schools, "The Role of the Department Chairman in Milwaukee Secondary Schools." Mimeographed Bulletin, Division of Curriculum and Instruction, March 3, 1959.

- Encourages systematic research for appraising the subjects offered in the department with the view of improving the instructional program.

- Participates in meetings

    1. Departmental staff meetings
    2. Interdepartmental meetings of chairmen as scheduled by the principal.
    3. City-wide meetings of subject area department chairmen.

- Studies trends and plans with other chairmen of the subject area for city-wide curriculum improvement under the leadership of the Superintendency; works under the principal's guidance in implementing plans and procedures developed through the Superintendency.

Additional functions may be identified which are unique to the goals of home economics education and to a particular school.

SAFETY IN THE CLASSROOM

The following suggestions may be helpful to the home economics teacher who is responsible for the safety of students working under her leadership and guidance:

- Remain in the classroom while students are present.
- Allow students access to rooms and equipment only when there is adequate adult supervision.
- Anticipate and correct situations which may cause accidents.
- Locate the fire extinguisher and fire blanket and explain the use of these items to the students.
- Guide students in the correct use of all equipment.
- Understand the code covering teacher liability.
- Know simple first-aid treatment and the procedures to follow in emergency situations.
- Report completely and accurately any accident, using the form which is available in the local school office.

Lessons in safety can be integrated into opportune learning situations. Taking responsibility for self <u>and</u> <u>others</u> indicates a growing maturity.

OPENING AND CLOSING THE DEPARTMENT

Opening and closing the department are important aspects of management. Proper attention to general management responsibilities establishes desirable standards throughout the entire year.

The preservation of materials and good sanitation practices determine the type of responsibilities to be assumed within the department. Department chairmen and teachers may wish to develop a check list of responsibilities which are necessary and appropriate for the opening and closing of the home economics department in their school. Learning experiences can be planned around the tasks to be done so that students can assist in organizing the department. This provides the students with opportunities in properly caring for equipment and applying management techniques that can be transferred to the home.

In closing the department the responsibilities are very similar, but in reverse of those necessary for the opening of the department. The teachers and students are responsible for leaving the facilities in a clean and sanitary condition. Particular attention needs to be given to the appropriate care and storage of food supplies and equipment as a precaution against household pests.

The summer school program requires the use of facilities, books, supplies, and equipment. The chairman of the department during the regular school year is responsible for seeing that the instructional materials and equipment are available for summer use. Summer school teachers and students are then responsible for the proper use and care of the department.

MAINTAINING DEPARTMENT FACILITIES

The appearance of the rooms in the home economics department reflects the educational program being carried out in the school. Acceptable standards need to be recognized and maintained for their contribution to an effective teaching-learning environment.

Department maintenance is a detailed responsibility that faces every teacher. Through the management of time and money, and most of all through the cooperative use of energy and ideas, the job becomes not only possible, but can also provide valuable learning experiences for the students. Students who are encouraged to recognize the jobs involved in department maintenance are willing to share in the work and assume responsibility in keeping the department clean, usable, and attractive. The teacher and her classes can do much to save time and energy through the use of preventive housekeeping. Equipment, supplies, and management methods can be utilized to protect the department facilities so that future cleaning is simplified.

Just as students and teachers must cooperate to manage the department, so must the teacher and school engineer cooperate if department maintenance is to be well done. The teacher needs to be familiar with the regular janitorial services provided in the local school. However, the basic responsibility for the overall appearance of the rooms must be assumed by the home economics teachers.

SCHOOL REPLACEMENT PLAN FOR APPLIANCES

An agreement exists between the Board of School Directors and the public utility companies of Milwaukee concerning the purchase and replacement of appliances. Significant factors in this agreement are:

- Original purchases of major appliances and small appliances are made from the gas company and the electric company.

- At regular intervals the appliances are replaced with new models. Electrical appliances are exchanged on a biennial basis. (Appendix N) Replacement of gas appliances usually occurs every third year.

- Specifications for the appliances are handled at the Administration Building. No requisitions are necessary for the exchange, however, teachers may submit a written request for changes in the size of appliances, additional items, or the elimination of certain appliances. Upon administrative approval, the requests are forwarded to the Purchasing Division.

- No charge is made for service which does not involve the replacement of parts. A telephone call to the Purchasing Division requesting service is sufficient. The Home Service Department, Milwaukee Gas Light Company may be contacted directly regarding service to gas appliances.

- Requests for repair which include damage to appliances or replacement of parts must be written on a repair requisition. The cost of this service is charged to the repair fund of the school requesting service.

The home economics teachers share the responsibility for wise use and care of appliances which are in the schools. The condition of the equipment when it is exchanged reflects the management practices within each of the schools. The department chairman should assume the following responsibilities concerning appliances on the school replacement plan:

- Examine each piece of equipment when it is delivered and promptly report any damage to the Purchasing Division.

- Retain delivery slips for use when appliances are checked for future exchange.

- See that all home economics teachers and students have the opportunity to read and understand the manufacturer's instructions regarding the use and care of the various appliances.

- Check all appliances which are to be returned for cleanliness and/or damage. A school will be notified two or three days prior to the exchange.

- Collect all small appliances in one place and check them against the original delivery slips at the time of exchange. This facilitates the work of the driver who delivers and picks up the appliances.

MANAGING DEPARTMENT BUSINESS

The management of department business is a cooperative enterprise shared by the chairman and teachers. The use of good business management contributes directly to the achievement of class goals. The material in this section offers special information on business procedures which contribute to the effective management of a home economics department.

ANNUAL BUDGET

A well-planned budget is essential to the management of an effective home economics department. Each department is financed by an allotment from the school board based on a yearly budget submitted by the department chairman. The budget year extends from January 1 through December 31. Items requested in the budget for a given calendar year may be ordered after January 1. Therefore, needs must be anticipated almost a year in advance since only those items which have been requested in the budget may be purchased. All budget requests are subject to the approval of the principal of the school and the staff of the Division of Curriculum and Instruction.

Budget requests are completed by department chairmen in March and April for the following year. The following guidelines should be considered when determining the annual budget:

- The number of students now enrolled in home economics courses and anticipated enrollments.
- Expenditures of the previous year or years.
- The focus and goals of each course.
- Expendable equipment and supplies required for all areas of the home economics program.
- Current upkeep of the department including needs for maintenance, repair, and replacement.

General Procedures

- Confer with the accountant or the secretary to determine the adequacy of the previous budget. Each school accountant keeps a record of expenditures and the balance for each division of the departmental budget.

- Discuss and determine the budget needs with all home economics teachers in the department.

- Consult the principal regarding variations in the budget requests. The total instructional budget of the individual school is under the administration of the principal.

- Discuss anticipated needs and budget requests with the home economics supervisors in a conference at the school or at the Administration Building.

Junior and senior high schools submit departmental budget requests to the school accountant using the form supplied by the school. Elementary schools submit budget requests to the Home Economics Office, Secondary Curriculum, on a form supplied by that office.

Budget Divisions

- Supplies usually refers to items which are consumable or breakable. The items usually cost $15.00 or less. Some examples are:

  food
  silverware
  child study play materials
  fabric samples
  china and glassware

- General Service includes professional cleaning of rugs, furniture, curtains, etc. Although this division is indicated in the departmental budget, the request becomes part of the general service budget for the individual school.

- Equipment refers to durable, lasting pieces. Some examples are:

  furniture
  electrical equipment
  book cart
  movable chalk board

- Replacement equipment includes the items which replace worn or outdated equipment.

- Additional equipment includes an increase in the equipment already on hand and new items which are needed for effective teaching-learning situations. The cost of the equipment must include any special installation service which might be required.

- Major repairs to the physical structure of the department and remodeling of any portion of the department are initiated by the department chairman and the principal of the individual school.

- Book requests in the secondary schools are submitted to the school librarian; in the elementary schools, the requests are submitted to the Home Economics Office. Funds must be requested for the purchase of:

    1. Books, pamphlets, and other printed materials to be used as references for home economics classes.

    2. Supplementary sets of textbooks for classroom use.

    3. Professional books for teacher advancement.

The book budget does not include funds for adopted textbooks. The adopted texts are provided to the students in the seventh and eighth grades. These books are ordered from the supply catalog. Adopted texts for grades 9-12 are purchased by the students.

Periodicals are provided under two-year contracts, 1965-1967, 1967-1969, etc., - for all departments and for the school library. Periodicals are processed by the librarian prior to the general budget requests on the alternate-year basis. Elementary schools make requests for periodicals on a purchase requisition and send the request to the Home Economics Office, Secondary Curriculum.

REQUISITIONS USED FOR ORDERING INSTRUCTIONAL MATERIALS AND SERVICES

Most instructional materials and services are supplied to home economics departments only upon the presentation of a written request. The request which is submitted on a requisition is reviewed by the principal of the school and by the staff of the Division of Curriculum and Instruction. There are four types of requisitions, - stock, purchase, book, and repair.

Stock Requisitions

Stock requisitions are used for merchandise which has been purchased in quantity and is stored at the School Board warehouses. Each school office has a catalog which lists all of the items available from the warehouses. Copies of the Home Economics section of the catalog are furnished to the home economics teachers. (Appendix O) Additional copies of the Home Economics section as well as copies of other sections in the catalog may be ordered on a stock requisition.

The following guidelines may facilitate efficient ordering of stock items:

- Check the anticipated delivery dates in the school office each September. The dates may vary from year to year.
- Establish procedures of ordering which meet the needs of all home economics teachers within the department.
- Develop a schedule for ordering to facilitate the routine office procedures.
- Allow from two to four weeks for the processing of stock requisitions.
- Check the department inventory to avoid duplication and overstocking of items. Merchandise must be ordered in appropriate quantities to provide for effective use.
- Examine all sections of the stock catalog for items which could be used by the home economics department. Several instructional supplies can be found in sections labeled General, Art, Industrial Arts, Lunchroom, etc. Items ordered from other sections of the catalog are coded and charged to the home economics budget.

- Indicate number, quantity, and the complete description of each item. (Appendix A)

- Submit the order to the school secretary who types the information on the stock requisition. (Appendix B)

- If items are marked "out" when the stock order is received, the items may be purchased in small quantities from the grocer. The following month reorder from the stock catalog.

Stock requisitions may also be used to pick-up items from the local school. This may include items such as the following:

- Incorrect items which have been sent from the warehouse on a previous stock order.

- Supplies and equipment which are worn and no longer usable.

- Obsolete books.

The list of items to be picked up should be given to the school secretary with instructions to place a checkmark in the box indicated "pick-up" on the requisition. (Appendix C)

Purchase Requisitions

Purchase requisitions are used to obtain supplies and equipment which are not carried in stock. Examine the catalog thoroughly for the availability of an item before making out a purchase requisition. The following procedures should be used for all general purchase requisitions:

- Give a concise description of the desired equipment or supplies indicating size, color, model number, approximate cost, and any additional distinguishing features. If possible suggest the company furnishing the supplies or equipment. (Appendix E.)

- Follow routine procedures for the processing of requisitions.

The department chairman must sign the paying and receiving copy of each purchase order and send it to the Purchasing Division. (Appendix H.)

Locally Purchased Items -

Occasionally, a teacher may need to purchase certain items from a local store where she may select specific merchandise. The procedures followed are:

- Visit the store and select the desired merchandise.

- Record the description of the article, the local store name, and the name or number of the salesperson. The Milwaukee stores are usually willing to hold merchandise until a purchase order is received from the Purchasing Division.

- Prepare the purchase requisition at the local school for routine processing. (Appendix F)

Delivery of the merchandise is made by the store if they have that service; otherwise, the teacher would need to pick up the merchandise.

Distilled water may be ordered on a purchase requisition. The minimum order which will be delivered is two cases. There are six half-gallons in one case. The number of empty bottles being returned to the company should be indicated on the paying and receiving copy of the purchase order as an allowance is given for the empty bottles. The Purchasing Division is not aware of the credit which should be allowed unless the number of empty bottles is indicated. (Appendix H)

Dry-Cleaning and Special Laundry Service -

Requests for dry-cleaning service are written on a purchase requisition. The pick-up date and the service required must be indicated on the requisition. (Appendix G) Special laundry service would also be written on a purchase requisition giving the same information as for dry-cleaning. See page 20 for information regarding regular laundry service.

Government Surplus Commodities -

Purchase requisitions may be used to order certain government surplus commodities for the home economics department. The commodity items must be ordered in full package lots and will be delivered with the lunchroom order.

The complete inventory of government commodities changes each month. Certain items are usually available every month. Departments with adequate storage may wish to order the following commodities:

Butter	32 - 1# cartons
Cheese (Processed)	6 - 5# cartons
Flour (All-Purpose)	5 - 10# cartons

Many of the commodities are packaged and distributed in lots which are too large for effective use in the home economics classroom. The list of available commodities appropriate for classroom use is sent to the department chairmen for the following month. The regular procedures are used to prepare the purchase requisition.

Book Requisitions

Book requisitions are used for books, pamphlets, and other printed materials. (Exception - coupons for government publications may be ordered from stock or obtained from the librarian.) The following guidelines may facilitate the departmental requests:

- In January the librarian of each secondary school notifies each department of the book fund allocation.
- Information regarding desired books or pamphlets is given to the department chairman.
- The chairman submits the order to the librarian using the form supplied by the librarian.
- Elementary teachers give their orders to the school secretary indicating the title, author, publisher, number of copies, and approximate price.
- The librarian and secretary prepare the requests on the book requisitions which follow the regular procedure for processing of requisitions. (Appendix D)
- Book requisitions are used for orders of more than $2.50. Orders for pamphlets which total an amount less than $2.50 may be ordered through a special library fund.
- Book fund allocations must be used prior to November 1.
- The department chairman should check with the librarian at periodic intervals during the year regarding the amount of money remaining in the department book fund.
- Additional information on books and periodicals is contained in the Budget section.

Repair Requisitions

All items for which repair is needed require a written repair requisition with the exception of electrical and gas equipment purchased on the replacement plan. (See School Replacement Plan.)

Because the quality of instruction in specific cases is directly dependent upon equipment which operates effectively, a concerted and cooperative effort must be made by teachers, secretaries, school engineers, and repair men to keep such equipment operating efficiently.

The signature of the teacher in charge, an engineer or secretary is essential before any piece of equipment may be removed for repair. Likewise, a signature is essential when equipment or parts of equipment are received.

Emergency repair requests may be initiated by the teacher through a repair requisition and a telephone call to the Purchasing Department requesting and confirming a repair order.

The Purchasing Department will make the confirmation after receiving the number of the requisition. They will also expect the written request naming the person at the Purchasing Department who confirmed the emergency request. ("Confirmed by_____.")

Sewing machines, garbage disposals, and miscellaneous pieces of equipment needed daily will require this type of attention. (Appendix J)

Routine repair requests for items which require periodic upkeep may be made by department chairmen. Vacation periods or certain periods throughout the day when equipment is not in use may be specified as a convenient time for routine repair. Sewing machines, some electrical equipment, knives and scissors, etc., may be considered for routine repair. (Appendix I)

A request for sharpening scissors and knives may be made during the summer. (Appendix K) Pinking shears are not included because the cost is greater than the purchasing of new ones. Pack scissors and knives separately, mark box with number and name of items, and send to the school office for museum pick-up.

Processing Requisitions

A minimum of two weeks is usually necessary for the processing of all requisitions. The following routine procedures apply to the processing of requisitions:

- Requisitions are coded and typed on proper forms by the school secretary.

- Requisitions are reviewed and signed by the school principal or accountant.

- Requisitions are included in the mail for the Administration Building which is collected by the Museum Delivery twice a week.

- Requisitions are checked for proper coding by Budget Control.

- Requisitions are reviewed and signed in the Home Economics Office, Secondary Curriculum.

- Stock requisitions are sent to the warehouse to be filled and delivered to the school.

- Repair requisitions are handled by the Repair Division.

- Purchase requisitions are forwarded to the Purchasing Division and a purchase order is made out for the merchandise. The paying and receiving copy of the purchase order is signed by the department chairman after the merchandise has been received. (Appendix H) The paying and receiving copy must be returned to the Purchasing Division so the vendor may be reimbursed.

INSTRUCTIONAL MATERIALS AND SERVICES NOT REQUIRING REQUISITIONS

Written requisitions are not required for some instructional materials and services. However, certain procedures must be followed for satisfactory and efficient service. Guidelines are given for the following major items used by the home economics department.

Perishable Foods

- Only perishables and items not carried in stock may be purchased from the grocery. Staples are more economically ordered from stock on a stock requisition.

- Each home economics department is responsible for the selection of a grocery.

- The grocery which has served a school in previous years should be retained by the school. Securing a neighborhood grocery which gives credit and delivers supplies to the school is not an easy task. However, if food or service is unsatisfactory, a change in grocers may be made. The suggested change must be approved by the Home Economics Office.

- The home economics teachers need to cooperate with the local grocer by planning weekly or semi-weekly orders.

Dairy Products

- The Purchasing Division receives bids and makes selections of dairies for schools with lunchrooms.

- Announcements of the dairy servicing a given school will be sent by the Purchasing Division to the school office or department chairman prior to the opening of school in September. The lunchroom and home economics department order from the same dairy. Orders can be telephoned directly to the dairy.

- All dairy products must be ordered from the selected dairy. Only elementary schools not having a lunchroom may order dairy products from the grocery.

Eggs

- Information is sent to the secondary schools specifying the company which will supply eggs for the following month.

- A notice is sent to department chairmen when a different company receives the contract to supply eggs.

- Orders are telephoned directly to the company and must be for at least ½ case which is fifteen dozen eggs. If a department cannot use or store the above amount of eggs, the orders for eggs would need to be placed with the grocery.

Regular Laundry Service

- Only the schools which have no washer and dryer in the home economics department should use professional laundry service.

- Check in the school office for the laundry which has been designated by the Purchasing Division.

- Telephone the laundry directly with the request for laundry service. No requisition is needed for the regular laundry requests. (See page 15 for special laundry requests.)

- A delivery ticket must accompany the finished laundry when it is returned to the school.

- Check the completed order, sign the delivery ticket and send it to the Purchasing Division via Museum Delivery.

Films and Filmstrips

The titles and descriptions of available films and filmstrips may be found in catalogs from the Milwaukee Public Schools, Milwaukee Public Museum, University of Wisconsin, and various commercial suppliers.

- The person in charge of instructional resources in each school should be consulted for the procedures to use when ordering films and filmstrips.

- Check with the building director before ordering a film or filmstrip for which there is a charge.

- Order films and filmstrips well in advance of the date for showing.

- Secondary schools may purchase current educational filmstrips. Filmstrips are ordered on a purchase requisition from department funds and retained in the department.

- Because of the expense, films are not to be purchased by individual departments. If a valuable film comes to the attention of a teacher, she can notify the Home Economics Office. A request will be sent to the Instructional Resources personnel for ordering and previewing the designated film. If approved, the film will be purchased for the Museum Film Library.

- Requests may also be made to have sets of filmstrips placed in the Museum Film Library.

Processing Delivery Slips

- All delivery slips should be checked for accuracy. This should be the responsibility of one person in the department.

- Every delivery slip must be signed by the teacher. The teacher must sign her full name. Using a stamp or initials is not sufficient. (Appendix L)

- Delivery slips from each of the vendors should be grouped separately and sent via Museum Delivery each week to the Home Economics Office, Administration Building. This procedure avoids the possible loss of delivery slips and unnecessary delays.

- Only the delivery slips which the home economics department has the responsibility for payment should be sent to the Home Economics Office. This includes all the bills which are for supplies used for educational purposes in the classroom.

- The teacher should keep a record of the purchased supplies and their cost to answer questions that arise occasionally at the Administration Building.

- At the end of every month, each vendor sends a monthly invoice of all purchases to the Home Economics Office. (Appendix M) The invoices are checked against the delivery slips and processed for payment.

- Promptness is imperative! Home economics teachers and vendors must have all delivery slips and statements sent to the Home Economics Office at the end of each month. The secretary must have the delivery slips checked by the tenth of the following month so the vendors may receive prompt payment.

*DENTAL ASSISTANTS; *PROGRAM DEVELOPMENT; CURRICULUM; STUDENT TEACHER RATIO; CERTIFICATION; ACCREDITATION (INSTITUTIONS); CLINICAL EXPERIENCE; *HEALTH OCCUPATIONS EDUCATION; *STANDARDS

Offered in a collegiate institution and leading to an Associate in Arts degree, the curriculum should include about 32 units of instruction in the dental assisting major, 14-20 units of related courses, and 10-19 units of general education. Early in the program, the student should receive an orientation clinical experience and later advanced clinical experience. The instructor-student ratio in these experiences should not exceed one to 16 in dental clinics or one to 12 in private dental offices. A planned orientation of dental students, practicing dentists, and employed dental assistants in advance of the student experience is important. An advisory committee including dentists and dental assistants should assist with planning, inaugurating, and implementing the program which should be evaluated continuously by the staff and the advisory committee in terms of current dental practices. The Council on Dental Education's accrediting program should be continued and students should be encouraged to seek certification by the American Dental Assistants Association. Included are an outline of recommended courses, a sample curriculum, and suggested course descriptions. (JK)

- Background Information
- Length of Program
- Articulation with Council on Dental Education Requirements
- Major, Related and Other Courses
- Sample Dental Assisting Curriculum
- Summary and Recommendations

PURPOSE

The purpose of this paper is to present a junior college administrator's point of view on dental assisting education that is based primarily upon (1) the results of a curriculum survey of 22 California junior colleges having dental assisting programs and (2) a subsequent series of state conferences and meetings on dental assisting education. The paper is limited to curriculum considerations and, therefore, excludes such topics as finance, equipment and facilities.

BACKGROUND INFORMATION

Expansion rates in dental assisting education programs in California junior colleges are somewhat parallel to the unprecedented development of the junior college movement throughout the state. Junior colleges, appropriately, reflect local needs, educational philosophies and demands. It is natural then, that dental assisting programs grew, under local control, to meet the needs perceived in each dental community. "It is not surprising, therefore, that a wide variety of curricula, facilities, and amounts of financial support appeared over a twenty-year period."[1]

Such a statewide diversity created a situation where norms were difficult to establish or recognize. Problems were encountered by college administrators and advisory committee as they attempted to determine the trends of their programs in relation to other programs in the state. Still other problems were encountered in transferring students or teaching personnel from one program to another.[1]

It was apparent that custom and the economic pattern of the various geographical areas determined the extent to which local dentists made use of assistants; what tasks the assistants were required to perform; what knowledges they needed. The equipment and techniques used by local dentists had their effect on the equipment used in the school; the amount and types of administrative duties assigned to the assistant in the dental office was reflected in

junior college dental assisting education programs[1]; and, of course, the influence of the Council on Dental Education of the American Dental Association's "Requirements for Approval of Educational Programs for Dental Assistants"[2] made its mark.

A pilot survey revealed that most of the colleges conducted four-semester programs leading to the Associate in Arts (A. A.) degree. However, as requirements for these degrees differed, time alloted to dental assisting courses also differed. A wide variety and proliferation of courses, units, and topic titles was also revealed.

In view of the above divergencies and of the need for a source of information and assistance that dental assisting advisory committees and college personnel needed in order to make curriculum decisions, a state Survey was made.[3]

The purpose of the Survey was to provide data that would assist in constructing a "model" of an adequate dental assisting program.[1] "Blocks" of curriculum content for such a "model" were constructed and edited by an ad hoc committee of dental assisting instructors, dentists and selected college administrators from throughout California. Further refinements and recommendations were made by the State Advisory Committee on Dental Assisting Education.[4] This official body was appointed jointly by the California Department of Education's Bureau of Industrial Education and the Education Committee of the California Junior College Association in 1966.

LENGTH OF PROGRAM

ADA- approved institutions for training dental assisting students in California are predominantly found in the junior colleges. Although there are a few two- and three-semester programs, the majority (15 of the 22 schools in the Survey) are four semesters in length. In addition, several proprietory (non-ADA approved) schools offer training of a few weeks' duration.

ARTICULATION WITH COUNCIL ON DENTAL EDUCATION REQUIREMENTS

On the matter of articulation of the forthcoming California recommendations[4] and the Council on Dental Education requirements[2], it appears that three broad areas are involved: (1) subject matter per se, (2) scope and sequence of that subject matter and (3) the degree of student competence to be expected.

A study of the two sets of recommendations reveals that the California plan not only meets all of the Council's[2] requirements but is even more extensive in several areas. The California recommendations spell out the curriculum content in greater detail and provide a pattern of courses that is more definitive and more adaptable to a collegiate setting.

If it can be assumed that there will be a need for greater competencies in the dental assistant of the '70's (both in performance skills and background from which to profit from continuing education), the Council on Dental Education, in terms of subject matter alone, may want to consider re-wording or adding a series of statements to its present requirements[2] so that it will include or place more emphasis on the following:

A. "Pre-clinical Sciences"

Terminology, dental assistant employment opportunities and job demands, introductory human anatomy and a more extensive delineation and treatment of "tooth form, function and relationships".

B. "Clinical Sciences"

Dental Specialties, solo and group practices ("knowledge and ability to assist the dentist in any routine or office procedure" appears to be concerned with only the solo, general practioner); basic physical and chemical properties of dental materials; systems of measurements; safe practices in the care and use of both supplies and equipment; more extensive treatment on the kinds and uses of dental laboratory models; biological effects of radiation and radiography and film evaluation rather than mere "ability to use x-rays"; insurance; credit and collections; correspondence; human relations, applied psychology, receptionists' duties and techniques; jurisprudence, including implications for auxiliary personnel, for patients and for dental records; legislation, including the state's labor code (if any), Workmen's Compensation, Social Security and unemployment insurance.

As to scope and sequence, any set of guidelines that are written may leave this matter wholly to the training institution. The State Advisory Committee[4], however, made some value judgments based on a pragmatic combination of both logical and psychological approaches to learning, on their personal experiences and on the opinions of various dental assisting instructors. If we are to be at all concerned with what might be termed "education economics", then the Committee's attempt to create a series of well-planned, orderly, efficient and effective learning experiences appears to be in order. These will take the form of a recommended series of courses with classroom, laboratory and clinical experiences and presented later in the paper.

One of the problems constantly facing me as an educator and technical education administrator is the general lack of preciseness which I find in attempts to express levels of expected achievement. A common weakness in trying to guarantee certain minimum competencies in trainees is to design a curriculum that is based solely on topics to be covered in a given period of time. Inherent in such practice is a series of hidden and oftentimes unrecognized assumptions. These include common backgrounds, motivations and learning capacities of students; common instructional abilities on the part of our teachers; common availability and utilization of various instructional media. Yet in spite of the obvious errors in such assumptions, we continue to ignore the matter. For all practical purposes we are then saying that time equals competence and use time as the fundamental criterion in expressing our desired educational goals, accomplishments and behaviors.

Evidence of this kind of practice includes such familiar "standards" as "the 104-hour course", "the course of study should be one academic year in length", "12 hours of chemistry", etc. Time, like teachers' materials or like educational facilities, is one performance resource but is not in itself a measure of accomplishment.

The alternative is to think in terms of performance criteria rather than in terms of time criteria. In a performance curriculum we define precisely what we want to happen and organize a curriculum in such a manner that each task to be learned is defined in terms of specific levels of achievement. As a student

progresses toward the ultimate aims of a unit, a course and a curriculum, his achievement is readily determined against the achievements that were defined for that unit, that course and that curriculum. The student continues to study the theory and to practice the skills until he can master the concepts and the tasks involved. Only such a curriculum design will prevent teachers from retreating to the rationalizations and platitudes that plague contemporary education. Only the implementation of such a curriculum design will guarantee a reliable educational product.

An attempt to develop performance criteria (also referred to as "behavioral objectives") was made in August, 1967 at a conference at Lake Arrowhead, California. Groups of dentist, dental assisting instructors and educators were assigned dental assisting curriculum "blocks" and challenged to develop instructional objectives similar, in essence, to those formulated by Robert Mager[5]: (1) identify the nature of the expected student performance; (2) define the conditions under which the performance is to take place and; (3) state the standards of competence that are to be expected.

Thus, such a vague instructional criterion as "knowledge of dental insurance" might be revised to read:

> "The student will identify and demonstrate her ability to complete pre-paid dental care forms according to the specifications of the organization involved."

Another example might be the replacement of the phrase "knowledge and ability to take x-rays" with:

> "The student will be able to demonstrate current techniques of patient positioning, film placement, angulation and exposure to obtain desired density according to dental practice standards".

Although admittedly there are many objectives that are not now readily defineable, reason dictates that we should identify and define those which we can. The final recommendations and guidelines of the State Advisory Committee[4] will include generous samples of performance criteria statements and, in addition, it is anticipated that knowledgeable dental assisting instructors will use, refine, and expand on those statements.

MAJOR, RELATED AND OTHER COURSES

In arriving at a recommended pattern of dental assisting, related science, related business and general education courses, the State Advisory Committee[4] utilized a number of sources of information. The primary source, however, was a statistical analysis of the tabulation of Survey responses[3].

After studying the data, analyzing the competencies desired in a dental assistant and working out a series of courses and course content, it was the considered judgment of the Committee that the resulting curriculum should be two academic years in length and lead either to an Associate in Arts (A. A.) or to an Associate in Science (A. S.) degree.

The method used in constructing the curriculum was as follows. First, the topics in the Survey[1] were re-arranged to correspond with the "Blocks" of subject matter developed by the various groups referred to in the "Background Information" section above. An elementary statistical treatment involving the range, mean and median was then determined for hours of lecture, laboratory, and total hours of lecture and laboratory for each "Block."

Figure 1 shows the recommended courses and units in the major together with the number of hours per week devoted to lecture, lab and the total. It also shows the total hours recommended for each course in the major.

The Committee based its recommendations on a semester of 18-weeks' duration. The number of hours recommended for lecture and laboratory experiences, therefore, are multiples of 18. Semester units of credit follow the typical collegiate practice of granting one unit of credit for each hour of lecture per week or 3 hours of laboratory work per week. In some courses the weekly hours of laboratory resulted in a number greater or less than 3 or a multiple thereof, but the over-all total for the major is a multiple of 3.

Figure 1 also indicates areas of instruction considered important to the training of competent dental assistants; namely, business, oral and written communication skills, natural sciences and psychology. Recommendations for exact courses and units in these areas were avoided. It was greed that local institutions and their dental assisting advisory committees were in a

better position to make such decisions. The same rationale was extended to general education and to state and local requirements.

In summary, the recommendation consists of 32 units (1011 hours) of classroom, laboratory and clinical instruction in the dental assisting major, from 14 to 20 units of related courses and from 10 to 19 units of general education including state and local requirements. The recommended associate degree curriculum contains 60 to 65 semester units of credit.

SAMPLE DENTAL ASSISTING CURRICULUM

Figure 2 shows a possible combination of the various courses in a four semester sequence including prerequisites for admission to the program. It is followed by suggested catalog descriptions of the dental assisting course.

[Note: The "Preliminary Draft" of the Survey[1] and the final document (to be published January, 1968) includes recommended outlines for these courses.]

STATE ADVISORY COMMITTEE FOR DENTAL ASSISTING
CALIFORNIA STATE DEPARTMENT OF EDUCATION
SACRAMENTO, CALIFORNIA

SUGGESTED DENTAL ASSISTING COURSE DESCRIPTIONS

DA 50 INTRODUCTION TO DENTAL ASSISTING 2 Units

Prerequisites: Admission to Dental Assisting Program.

History of dentistry, professional organization, ethics, terminology, health and grooming, employment and job demands.

Lecture 2 hours

DA 52A BIO-DENTAL SCIENCES 3 Units

Prerequisites: Admission to Dental Assisting Program.

Introduction to general anatomy, head and neck, teeth and supporting structures, pathology of hard and soft tissues.

Lecture-Laboratory 4 hours

DA 52B BIO-DENTAL SCIENCES 3 Units

Prerequisites: DA 50, 52A.

Introduction to microbiology, sterilization and disinfection, diet and nutrition related to dental health, pharmacology.

Lecture-Laboratory 4 hours

DA 54 DENTAL MATERIALS 2 Units

Prerequisites: DA 50, 52B(may be taken concurrently)

Basic physical and chemical properties of dental materials, classification of materials--gypsum products, impression materials, cements, metals, porcelains, abrasives, chemicals.

Lecture 1 hour Laboratory 3 hours

DA 56A PRACTICE ADMINISTRATION 2 Units

Prerequisites: DA 50, 52A

Jurisprudence; human relations; psychology; office procedures including reception

duties, bookkeeping, correspondence and filing. Visits to private dental offices with participation in selected office activities.

Lecture-Laboratory 4 hours

DA 56B PRACTICE ADMINISTRATION 3 Units

Prerequisites: DA 56A

Continuation of DA 56A. Emphasizes forms, credit and collections, insurance, supplies and inventory.

Lecture-Laboratory 4 hours

DA 60A DENTAL RADIOGRAPHY 2 Units

Prerequisites: DA 52A, 52B

History, principles, biological effects of radiation, films, exposure and processing techniques, evaluation, mounting.

Lecture 1 hour Laboratory 3 hours

DA 60B DENTAL RADIOGRAPHY 2 Units

Prerequisites: DA 60A

Continuation of DA 60A. Emphasizes films, exposure and processing techniques and evaluation.

Lecture 1 hour Laboratory 2 hours

DA 62A DENTAL OPERATORY PROCEDURES 3 Units

Prerequisites: DA 52B, 54

Pre-operative procedures; instruments; function, care and maintenance of equipment; patient care; introduction to operative and post-operative procedures.

Lecture 2 hours Laboratory 3 hours

DA 62B DENTAL OPERATORY PROCEDURES 2 Units

Prerequisites: DA 62A

Continuation of DA 62A. Anesthetics, restorative dentistry, prosthetics, endodontics, oral surgery, periodontics, pedodontics, orthodontics, dental health education, emergency and first-aid, operative and post-operative procedures.

DA 64A DENTAL LABORATORY PROCEDURES 2 Units

Prerequisites: DA 52B, 54

Principles of safety, care and maintenance of equipment, types and uses of impression trays.

Lecture 1 hour Laboratory 3 hours

DA 64B DENTAL LABORATORY PROCEDURES 2 Units

Prerequisites: DA 64A

Preparation and uses of dental waxes and impression materials, models, removable protheses, dental laboratory functions and dental laboratory case preparation.

Lecture 1 hour Laboratory 2 hours

DA 70A SUPERVISED CLINICAL EXPERIENCE 2 Units

Prerequisites: Concurrent registration in DA 60A, 62A, 64A

Practical dental assisting experience with instructor supervision in such locations as dental schools, clinics, hospitals, and selected private practices.

Lecture 1 hour Laboratory 3 hours

DA 70B SUPERVISED CLINICAL EXPERIENCE 2 Units

Prerequisites: DA 70A

Continuation of DA 70A with emphasis on practical experience in private dental practices.

Laboratory 7 hours

SUMMARY AND RECOMMENDATIONS

We have reviewed the efforts of a cross-section of persons interested in dental assisting education as they worked in a variety of settings and with a variety of resources over a period of time. We have also seen how the results of these efforts were used by the California State Advisory Committee on Dental Assisting Education to arrive at a plan for the education and training of future dental assistants that is consonant with the demands of modern dental and ecucational practices. Built into the plan are the ingredients necessary for effecting a smooth, easy transition to the acquisition of new competencies as the art and science of dentistry and education advance and as legislation permits.

In order to implement effectively the plan that is outlined in this paper, it is recommended that:

1. The program of instruction should be offered in a collegiate institution and lead to an Associate in Arts (A. A.) or Associate in Science (A. S.) degree.

2. Curriculum prerequisites should be of a nature that will assure high school graduates a reasonable chance for success both in the program and on the job.

3. Performance criteria, courses and course content should follow the patterns outlined in this paper.

4. The curriculum should provide for about equal amounts of (a) general education and related "pre-clinical" subjects and (b) specialized dental assisting courses.

5. Early in the program, and prior to advanced clinical experience, the student should receive orientation experience in a dental school, clinic or private office.

6. Advanced clinical experience should involve a variety of educational experiences in both dental clinics and selected private offices.

7. Supervision of students in clinical experiences should not exceed a supervisor/instructor-student ratio of more than 1:16 in dental clinics or 1:12 in private dental offices.

8. A planned program of orientation for dental students, practicing dentists and their dental assistants should precede the clinical experience of dental assisting students.

9. A knowledgeable and competent advisory committee with dentist and dental assistant representatives should be appointed to assist with the planning, inauguration and implementation of each program. (See statement, pp. 20-21, on "Function and Composition of Advisory Committees".)

10. The Council on Dental Education's practice of accrediting dental assistant training programs should be continued for it represents a distinct service to dental assisting education.

11. The educators in accredited dental assisting institutions encourage and provide the opportunity for each student to apply for the certification examination provided by the Certifying Board of the American Dental Assistants Association.

12. The program should be evaluated continuously by staff and local advisory committees in terms of current dental practices.

*ADVISORY COMMITTEES; *EDUCATIONAL IMPROVEMENT; *VOCATIONAL EDUCATION

The place of the advisory committee is discussed in this booklet. The committee is defined and its functions listed with suggestions for selecting the members. The operation of the advisory committee is set forth as essentially that of a consultant role as well as a communication link between the community and the school. The advisory committee and its relation to the school should be outlined by the director of vocational education or the school representative. Committee members should visit the school to observe training and facilities. The school administration should evaluate the advice of the committee, and use it for upgrading or developing new vocational programs. (MS)

Conclusion 8

THE ADVISORY COMMITTEE

Organization and Function in Vocational Education

Foreword

The advisory committee is a communication link between the community and the school. The school should know the community's wants and needs. The advisory committee is in a position to supply this information.

Vocational education needs close cooperation with the community. It trains students for specific jobs and productive lives. It needs the experienced evaluation of workers in the field to be sure that its training courses and equipment are up to date and that its preparation for life work is useful.

Vocational education personnel feel that the advisory committee is a very important part of the program and its activities. A strong advisory committee can do much in helping the school build strong, responsible citizens.

Advisory Committee

An advisory committee is a group of representative laymen, recognized and respected experts in their own fields of work, who assist educational personnel in building sound programs based on the real needs of a community.

Types of Advisory Committees

General Advisory Committee

A general advisory committee, serving a local board of education, provides advisory services in determining objectives and broad policies in connection with types of vocational services that are needed in the area served by the local school. The number of members may vary according to the crafts represented in the program.

Craft Advisory Committee

A craft advisory committee is organized to advise local school administrators regarding instructional programs for a specific craft or occupation. A craft committee, representing only one trade or vocational subject, may have four to six or more members.

Area vocational schools may have larger committees as it is especially necessary for them to have adequate geographical representation from various sections of their service areas.

In order to promote free discussion by the committee, no more than one or two noncommittee members should be invited to attend any given session.

Function of the Advisory Committee

The advisory committee should become completely familiar with the aims and objectives of vocational education and the field of training they are to advise.

- Members of the committee may profitably study and discuss regulations relating to various types of training, including: cooperative part-time, evening school, part-time extension, day trade, and apprentice training.
- The school administration needs the advice of the committee as to the types of courses needed to satisfy day and evening training needs of a community.
- Advisory committees need to check existing vocational training to see that it fits life situations.
- They can assist public schools in maintaining up-to-date, effective programs of vocational education that meet student and community needs.
- Advisory committees may assist in preparation of courses of study, setting up standards, securing proper equipment, taking community surveys, and publicizing school programs.
- They should determine when additional equipment or instructional material is needed to keep training up to date.
- Standards for entrance into vocational courses should be established by advisory committees.
- Advisory committees should assist in determining the number of students to train for a particular field of work.
- They should support school administrators in appropriation requests by influencing state and federal legislation.
- Graduates who have successfully completed their training should be aided in employment placement by the advisory committee.

Selection of Advisory Committee Members

A regular system of appointing advisory committee members should be planned. Members who are appointed for a definite term of office generally serve from one to three years. Terms should be staggered to assure experienced personnel on committees.

The advisory committee should be made up of equal representation from employer and employee groups. The school may be represented by the director of vocational education, the administrator, or an instructor in a particular trade.

Operation of Advisory Committees

The school board (the group in which local authority is vested) retains full responsibility for its vocational program. The advisory committee acts in a consultant capacity, responsible for making recommendations and suggestions to school authorities who are empowered to act upon the advice offered. The advisory committee has no authority to delegate or to legislate.

The chairman may be elected from the group of laymen, or the school representative may act as chairman. The chief duty of the chairman is to preside at all meetings. He usually appoints subcommittees and represents the committee in other groups.

The school representative may serve in three capacities. He may act as secretary; he may serve as

general consultant; he may be chairman. One of the most important duties of the school representative, in cooperation with the committee chairman, is the preparation of an agenda for every meeting. He must state the exact problems of the vocational program and present them clearly to the committee for discussion and advice.

Common practice is to send copies of minutes of meetings to individuals and agencies involved and to all interested persons.

Recommendations of the advisory committee should be in writing to avoid any misunderstanding or loss of memory. A record of all recommendations should be kept on file.

The number of meetings each year and time of meetings should be established by the group as a committee. Meetings may be called at regular intervals or as needed. A regular once-a-month meeting may be in order for craft advisory committees. The initial meeting of the committee should lead to the adoption of a program of work for the current school year. Meetings should be called only to determine or implement programs of work.

The advisory committee should be governed by a constitution and by-laws to create an atmosphere of permanence and purpose in the group. A constitution should include only provisions necessary for efficient committee operation. Each member should have definite duties and responsibilities. Advisory committees should be informal and flexible, changing procedure according to circumstances, and working in an atmosphere of friendly cooperation.

The Advisory Committee and the School

The director of vocational education or the school representative should instruct committee members in functions and objectives of vocational education. General operating policies of the State Plan and Federal Acts dealing with vocational education should be explained.

Committee members should be kept fully informed as to progress of the training in which they are interested.

Committee members should visit the school to observe training, facilities, special assemblies, and social gatherings.

Function of lay persons on the committee is to assemble and interpret first-hand information concerning community needs and function of the school officials to recognize these needs as being definite, then proceed in organizing materials and proper teaching methods.

Conclusion

School administration should listen to the advice of the committee, evaluate it, and use it to up-grade existing programs and to develop new ones. Advice of the committee should be sought frequently about problems familiar to them. If the suggestions of the committee members are sensible and sound, they should be adopted whenever possible.

Vocational Education Act of 1963 (cont.)	Manpower Development and Training Act (cont.)
5. At least 3% of a state's allotment must be used for ancillary services including: - Teacher Education, Supervision - Vocational Guidance - Curriculum Materials - State Administration and Leadership - Program Evaluation - Research	d. Youth (17-21) if completely separated from the public school and in separate classes from adults. These programs are provided for: - youth centers in urban areas - youth who are socio-economically handicapped.
6. Ten per cent of the Federal funds appropriated are reserved for the United States Commissioner of Education to make special grants for research, experimental and pilot programs.	3. Training allowances, administered by the Employment Service, are paid to eligible trainees meeting certain qualifications. If training is away from the place of residence, subsistence and travel allowances are paid in addition to training allowance.
7. The Act provides a work study program for full-time students (15-21) who meet certain requirements, to help them stay in school through part-time employment either by the local educational agency or some other public agency or institution.	4. Costs of these programs are financed with 100% Federal funds through June 30, 1966. After that date, the vocational training phase must be matched - 10% State or local funds (in cash or kind) with 90% Federal funds. Training and subsistence allowances will remain at 100% reimbursement.
8. The Act calls for an evaluation of the total vocational program by January 1968 and every five years thereafter.	5. Training program is on a full-time basis for length of time needed, up to 104 weeks. 6. This program has been extended to June 30, 1969.

GENERAL PROVISIONS OF SOME RECENT

Public Law 88 - 210
Part A
Vocational Education Act of 1963

Purpose: To maintain, extend and improve existing Vocational Education programs; to develop new programs; and to provide part-time employment for youth who need it to continue their vocational training on a full-time basis.

Some Provisions

1. All new money from the Act and 10% of money for Home Economics under the Smith-Hughes and George-Barden Acts must be used for occupational training.

2. Funds are appropriated for Vocational Education rather than for specific areas.

3. Persons eligible to receive vocational training are:

   - High school students
   - Persons who have completed or left high school (including those in 13th-14th year program)
   - Persons in labor market who need training or retraining
   - Handicapped persons (academic, socio-economic, or other).

4. The Act provides funds for area school facilities, including construction and equipment.

Public Law 88 - 214
Amended by Public Law 89 - 15
Manpower Development and Training Act

Purpose: To provide occupational training or retraining to unemployed and underemployed persons.

Major Provisions

1. This is a cooperative program administered jointly by the Employment Service and Vocational Education.

   - Employment Service determines occupational training needed, selects the trainees, takes care of placement and follow-up of trainees, and administers all allowances paid to trainees.

   - Vocational Education is responsible for the training program and assists with the follow-up and evaluation of trainees.

2. Trainees include:
   a. Adults who are
      - unemployed
      - have been wage earners at least two years
      - are heads of households
   b. Women who are not heads of households, but are supplementary wage earners
   c. Single members of family without dependents where head of household is unemployed

LAWS AFFECTING VOCATIONAL EDUCATION

Public Law 88 - 452 Economic Opportunity Act	Public Law 89 - 10 Elementary and Secondary Education Act - 1965
Purpose: To create new opportunities and expand existing ones for young people to obtain work, education, and training.	Purpose: To strengthen and improve educational quality and opportunities in the nation's elementary and secondary schools.
Title I YOUTH PROGRAMS	Title I EDUCATION OF CHILDREN OF LOW-INCOME FAMILIES
Part A: Job Corps to provide education, work experience, and vocational training in conservation camps and residential training centers for youth (16-21) from low-income families.	Provides financial assistance to local educational agencies to provide educational programs for children of low-income families.
Part B: Work-training programs to help youth (16-21) stay in school and gain work experience.	Title II SCHOOL LIBRARY TEXTBOOKS, AND OTHER INSTRUCTIONAL MATERIALS
Part C: Work study program to provide employment opportunities to enable low-income youth to enter or continue college-level education.	Provides money for such items as books, periodicals, magnetic tapes, records, and other printed and published materials. Each state develops own plans for use of these funds considering state laws and needs of children and teachers for such materials.
Title II COMMUNITY ACTION PROGRAMS	Title III SUPPLEMENTARY EDUCATIONAL CENTERS AND SERVICES
Part A: Provides grants for financing anti-poverty programs carried out on a community level.	This is a five-year program to provide special personnel, equipment, and other costly educational services not normally available, such as guidance and counseling, remedial instruction, school health services, language and science labs, etc.
Part B: Provides grants to states for basic education and literacy training to adults (18 and over).	
Part C: Provides for a clearing house to help place needy children in foster homes.	

Economic Opportunity Act (cont.)

Title III SPECIAL PROGRAMS TO COMBAT POVERTY IN RURAL AREAS

Part A: Grants and loans to low-income rural families

Part B: Assistance to migrant workers and families

Part C: None

Part D: Indemnity payments to dairy farmers who have suffered loss in the use of government chemicals

Title IV LOANS TO ASSIST SMALL BUSINESSES

Title V WORK EXPERIENCE PROGRAM FOR UNEMPLOYED FATHERS

Title VI ADMINISTRATION AND COORDINATION

Includes V I S T A program

Administration of Act

Title II, Part B, is administered through the Adult Education Division of the State Department of Education. All other parts of the Act are administered by other agencies or groups.

Elementary and Secondary Education Act - 1965 (cont.)

Title IV EDUCATIONAL RESEARCH AND TRAINING

Authorizes the establishment of a series of national and regional educational laboratories, providing support of educational research, development, dissemination and training.

Title V STRENGTHENING STATE DEPARTMENTS OF EDUCATION

Provides funds for the development, improvement, or expansion of programs and projects to improve the effectiveness of State departments in such ways as educational planning on a state-wide basis, the identification of educational problems and needs, and the evaluation of educational programs.

Criteria, Standards and Policies for Vocational Business and Office Education. Today's Preparation for Tomorrow's Jobs. Working Draft.

West Virginia State Dept. of Education, Charleston. Business Education Service
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 65 16p.

*OFFICE OCCUPATIONS EDUCATION; *STATE STANDARDS; *ADMINISTRATIVE POLICY; SECONDARY EDUCATION; POST SECONDARY EDUCATION; ADULT VOCATIONAL EDUCATION; *STATE FEDERAL SUPPORT; *PROGRAM GUIDES; EDUCATIONAL FACILITIES
WEST VIRGINIA

Criteria, standards, and policies for the organization and operation of business education programs to qualify as vocational units in West Virginia are provided. Types of programs include high school, post-secondary, adult and those for persons with socioeconomic or other handicaps. Each high school or post-secondary student receiving instruction in vocational classes must have declared in writing an occupational objective. Each high school program shall provide a minimum experience of six units of credit in vocational business and office education courses. High school classes shall consist of a minimum of 15 and a maximum of 25 students. Post-secondary and adult classes shall consist of a minimum of 12 and a maximum of 30 students. Suggested specimen curriculums are outlined. The cooperative work-training program, recommended physical facilities, teacher's qualifications, and allocation of federal and state funds are included. West Virginia Department of Education
Bureau of Vocational Education
Business Education Service

CRITERIA, STANDARDS AND POLICIES FOR VOCATIONAL BUSINESS AND OFFICE EDUCATION

I. Purpose

The purpose of vocational business and office education programs is to provide persons over 14 years of age, who have the ability to profit from the instruction, with marketable skills, knowledge and attitudes to enter a business occupation. The program is also designed to provide for refresher courses and courses for upgrading skills which may lead to promotion or advance positions. The instruction must be of such quality that persons completing the program are employable and capable of succeeding in the occupation for which they have prepared.

II. Occupations to be Served

Vocational business and office education shall be defined as those programs preparing individuals for occupations which are related to the facilitating functions of the office in either public or private enterprises. Many office occupations may be classified under one of the following types:

A. Stenographic, typing, filing and related occupations
B. Computing and accounting occupations
C. Material and production recording occupations
D. Information and message distribution occupations
E. Accounting, auditing, budget and management analysis
F. Data processing occupations

III. Types of Programs for Students That May be Offered

A. HIGH SCHOOL STUDENTS who spend the full day in school. (This includes students who work part-time in supervised cooperative work-training programs.) Each student receiving instruction in vocational classes shall have declared in writing an occupational objective.

B. POST-SECONDARY STUDENTS who enroll on a full-time basis in preparation for entering the labor market. An occupational objective, in writing, shall have been declared by each student.

C. ADULTS who are already employed but who wish to take refresher courses, prepare for new positions, or advance to higher level positions.

D. PERSONS WHO HAVE SOCIO-ECONOMIC OR OTHER HANDICAPS that prevent them from succeeding in regular vocational business and office education programs.

IV. Class Size, Time and Schedules

A. High School Classes

1. Class Size - A minimum of 15 students is required to start a vocational business or office education class or program. An enrollment of at least 10 students must be maintained in such classes. Enrollment in vocational business and office education classes should not exceed 25 students.

2. Time - Vocational business and office education classes shall meet on a regular 55-minute class period basis or for double periods where course content is integrated--cutting across two subject-matter areas.

NOTE: No program in vocational business and office education shall be approved that is not at least one year in length. It is recommended that courses in the 11th and 12th grades be offered in combinations or in blocks or time, consisting of two or three class periods.

3. Schedules - Each program shall arrange course offerings in a logical sequence and shall provide a minimum experience of six units of credit in vocational business and office education courses.

NOTE: Students should normally be enrolled in vocational business and office education classes during both the 11th and 12th grades. However, in exceptional cases it may be possible to have vocational classes during the 12th grade only or to start vocational study earlier than the 11th grade.

B. Post-Secondary and Adult Education Classes

1. Class Size - A minimum of 12 students will be required to organize and maintain a vocational business and office education class on the post-secondary or adult level.

The maximum enrollment shall be determined by the course taught and the physical facilities available, but in no case shall a class exceed 30 students.

2. Time - Post-Secondary classes in vocational business and office education classes should be on the same time basis as those on the high school level.

Classes organized for upgrading persons for higher level positions should be three hours in length per class meeting.

V. Curricula and Programs

A. High School

1. Curricula - An individual school may choose to provide a vocational business and office education program designed to prepare workers for a single cluster of closely related

occupations such as typist, clerk or clerk-typist only; or a school may choose to provide vocational preparation in several business or office occupational areas. The program would vary with school size and number of teachers employed.

For each area in which a school wishes to offer a vocational program of studies, a list of those courses students would pursue should be specified. There may be certain subjects that would be a part of more than one specialized curriculum.

Each student shall earn a minimum of six credits in business education subjects. This includes credit earned in cooperative work-training programs.

The curriculum proposed to be taught must be submitted to the State Supervisor of Vocational Business Education for approval. The curriculum shall list the courses to be taught and an outline showing the principal content areas (or subject-matter units) to be included in the course.

Should a teacher decide that any particular student is unable to master the program of study which he is pursuing, the teacher should recommend that the student transfer to a different program--one that is aimed toward a different occupational objective. When such a transfer is made, the record of the student's declared objective should be changed accordingly.

NOTE: It is quite possible that a change in the student's program within the vocational business and office education curricula may fulfill the needs for student success.

2. Programs - Outlined below are suggested specimen programs. The content areas are those that seem pertinent to vocational competency in a specified area of preparation.

   It is recommended that course work be integrated and that a time block of two or three class periods be used during grade 12.

   During grade 12 a significant amount of time should be spent in office-type assignments or in a supervised work-training program. Work-training programs may be cooperative work-and-study programs in business, government, non-profit institutions or in school offices.

   Where the supervised cooperative work-training program is not utilized, the school should provide a classroom laboratory with a simulated office environment and office-type assignments.

Electives: Data Processing, Business Law, Salesmanship, Retailing, Advertising, Business English, Typewriting II

d. Data Processing

NOTE: Highly specialized instruction for data processing skills cannot be offered at every high school. However, this could be done in regional or area vocational centers serving the high school, the post-secondary school and the adult program.

10th Grade	11th Grade	12th Grade
General Business Typewriting I	Bookkeeping I Data Processing I	Data Processing II Office Machines

Electives: Business Law, Clerical Office Practice or Vocational Office Training, Advertising, Business English, Typewriting II, Business Math, Bookkeeping II

B. Cooperative Work-Training Program

VOCATIONAL OFFICE TRAINING

Supervised work-training programs may be provided for students who are at least 16 years of age and who are enrolled in vocational business education classes. This type of program may be offered on both the high school and post-secondary level.

Such classes shall be organized through cooperative agreements (preferably in writing) between the school and employers who provide the on-the-job learning experiences. Such arrangements shall provide for:

1. The legal employment of student-learners in conformity with Federal, State and local laws and regulations in a manner not resulting in exploitation of such student-learners for private gain.

2. An organized program of training on the job for each student-learner.

3. Supplemental related vocational instruction in the school.

Cooperative work-training programs in vocational business and office education programs shall:

1. Be appropriate to the students' vocational objectives.

2. Be of sufficient duration to develop competencies necessary to fit students for employment in their declared occupational fields.

3. Be supervised by a member of the school staff who is qualified under the State Plan for Vocational Education.

Students who are participating in supervised cooperative work-training programs may be grouped together in the same classes, even though they have varying occupational objectives, provided each student follows a carefully developed study plan. These study programs should state clearly course objectives, subject-matter content and probable student experiences. They should also specify which knowledge and skills are to be taught in the classroom and which are to be taught on the job.

When students engage in cooperative work-training programs, they must work an average of 15 clock hours per week. They must also enroll in at least one vocational business subject that meets at least one class period per day. (It may meet for two or three class periods per day.)

When high school students participate in a supervised work-training program along with at least one vocational business subject, they may earn 2 units of credit per year for successful completion of this combined training.

The supervisor of a cooperative work-training program in vocational business and office education shall be referred to as a

"teacher-coordinator", and the class shall be referred to as "Vocational Office Training."

C. Post-Secondary

Post-Secondary programs in vocational business and office occupations are essentially of two basic types:

1. Preparatory programs for persons who wish to qualify for initial positions.

2. Upgrading programs for employed personnel who wish to qualify for higher level positions.

Curricular programs at the post-secondary level shall be planned to meet the recorded career objectives of the students who are enrolled in those classes. A definite program of study shall be developed for each class group designed to move them forward toward qualifying for their declared occupational objectives.

The curricula offered in the post-secondary program will follow the same general pattern as those suggested for the high school and shall extend into such areas as management, small business organization, administrative specializations and other allied fields in related occupations.

For each occupational area of vocational business and office education in which a school wishes to offer a vocational program of studies, the courses or subject-matter areas that students may pursue shall be listed, outlined and described. The proposed curriculum must be submitted to the State Supervisor of Vocational Business Education for approval.

D. Advisory Committee and Community Survey

There shall be a local advisory committee for vocational business and office education program to consist of at least three business men and at least one member of the vocational business education staff. This committee shall consult with and advise the vocational business education teachers and administrative officers of the school regarding the study and work-training program in vocational business and office education for their community.

A business occupations survey should be made of the business community for indications as to where the graduates are most likely to find employment.

VI. Physical Facilities

A. Classrooms and Laboratories

The dimensions of classrooms and laboratories may vary considerably according to the different types of instruction to be offered. The space provided will determine the maximum number of students that may be accommodated. Table A indicates the recommended number of students and square feet of floor space per student for most vocational business and office education classes.

TABLE A

Subject	No. Students	Square Feet Per Student
General Classroom	24 - 30	25
Typewriting Laboratory	24 - 30	30
Stenographic Laboratory	20 - 24	30
Bookkeeping Laboratory	20 - 24	30
Multi-Purpose Classroom	20 - 24	40
Retailing Laboratory	20 - 24	45
Office Machines Laboratory	20 - 24	45

NOTE: Typewriting, multi-purpose and office machine rooms should be equipped with an electrical outlet for each work station with a master switch operated by a key and lavatory facilities in the classroom or laboratory.

At least 25 running feet of chalkboard should be available in the bookkeeping, business mathematics and shorthand laboratories. In the office machines and typewriting laboratories 15 running feet of chalkboard will be adequate. Bulletin boards should be located in a prominent place in the classroom so that they may be seen and examined by the students.

B. Offices and Storage

1. Faculty Office - The Vocational Business Education Department should contain adequate office space for the head of the department. It is recommended that a small conference room be located adjacent to this office space for guidance and counseling and advisory committee work.

2. Storage - Adequate storage for supplies, spare equipment and audio-visual materials should be provided.

VII. Equipment, Furniture and Supplies

Up-to-date teaching materials such as records or tapes correlated with the textbook being used and materials for preparing posters, bulletin boards and transparencies should be provided. The following is a recommended pattern for a well-equipped vocational office machines laboratory, electronic shorthand laboratory, bookkeeping-accounting classroom, typewriting laboratory and a data processing laboratory.

VOCATIONAL OFFICE MACHINES LABORATORY

NOTE: The equipment listed below serves twenty-one students simultaneously on a rotating plan.

Office-Style Typewriting Problems

3 Elite type electric typewriters
3 Clerical desks - 24" x 40" x 28"
3 Adjustable posture chairs, with casters

Machine Transcription

3 Manual or electric typewriters
3 Secretarial desks - 30" x 55" x 30", with typewriter well or side pull out
3 Adjustable posture chairs, with casters
1 Dictating-transcribing machine
2 Transcribing machines

Ten-Key Adding-Listing Machine

2 Electric 10-key adding-listing machines
1 Electric 10-key printing calculator
3 Machine tables - 20" x 38" x 28"
3 Side or swivel chairs - 16" or 17", with casters

Full-Keyboard Adding Machine

3 Electric full-keyboard adding machines
3 Machine tables - 20" x 38" x 28"
3 Side or swivel chairs - 16" or 17", with casters

Key-Driven Calculator

3 Electric key-driven calculators
3 Machine tables - 20" x 38" x 28"
3 Side or swivel chairs - 16" or 17", with casters

Rotary Calculator

3 Electric 8-column automatic rotary calculators
3 Machine tables - 20" x 38" x 28"
3 Side or swivel chairs - 16" or 17", with casters

Duplicating Machines and Accessories

1 Stencil duplicator, electric, with storage cabinet
1 Illuminated drawing board, with stylus guides and shading plates
1 Fluid duplicator, manual or electric, with storage cabinet
1 Photo-copying machine, with storage cabinet
1 Elite type electric typewriter, long carriage - 18" to 20"
1 Selectric typewriter, 16" carriage, with several different type elements
1 Manual typewriter
3 Tables - 24" x 40" x 28"
3 Adjustable posture chairs - 16" or 17", with casters
1 Collating table - 24" x 70" x 30"
1 Collator (optional)

Other Equipment, Furniture, Appliances and Supplies

1 Interval timer
1 Stop watch
2 Desk trays
2 Pencil sharpeners
1 Paper cutter
2 Four-drawer file cabinets (one with lock)

1 Receptionist - secretarial desk and chair, with casters--class assistant station
1 Teacher's desk and chair, with casters
1 Projection screen
2 Wastebaskets
1 Paper punch
2 Staplers
1 Long-arm stapler
1 Hanging file cabinet (for used stencils)
1 Filmstrip and slide projector combination (with films and suitable slides)
1 Opaque projector
1 City Directory
1 Postal Guide
1 Postage scales
3 Dictionaries

Miscellaneous Supplies

Paper clips, rubberbands, thumbtacks, rulers, correction fluid, correction tape, carbon paper, master units, stencils, erasers, colored pencils, mimeograph ink, ink pads for mimeograph machine, protective covers for machines, adding machine tape, type cleaner, etc.

VOCATIONAL SHORTHAND LABORATORY

NOTE: Advanced vocational shorthand should have a typewriting laboratory available for machine transcription.

24 Student stations with straight-back chairs
24 Electronic multiple listening stations with individual controls
1 Console for transmitting dictation material
1 Portable overhead projector
1 Projection screen
1 Controlled reader and complete set of teaching aids
2 Pencil sharpeners
1 Stop watch
1 Four-drawer file cabinet with lock
2 Staplers
2 Desk trays
2 Wastebaskets
1 Unabridged dictionary and stand
1 Teacher's desk - 32" x 54" x 30" and chair, with casters
Records and/or tapes (to correlate with textbook)
Specialized tapes and records for legal, medical and scientific dictation
Grease pencils for use with overhead projector
6-8 Legal, medical, scientific and technical shorthand dictionaries
6-8 Student dictionaries
6-8 Shorthand dictionaries
6-8 Secretarial handbooks

VOCATIONAL BOOKKEEPING AND ACCOUNTING LABORATORY

24 Bookkeeping stations with straight-back chairs, desks should be 20" x 36" x 28"
4 Electric 10-key adding-listing machines

2 Tables for adding-listing machines - 20" x 72" x 28"
1 Portable overhead projector
1 Projection screen
1 Set of bookkeeping slides (to correlate with textbook)
1 Set of bookkeeping charts (to correlate with textbook)
1 Four-drawer file cabinet with lock
2 Desk trays
2 Pencil sharpeners
2 Staplers
2 Wastebaskets
1 Teacher's desk - 32" x 54" x 30" and chair, with casters
1 Opaque projector

VOCATIONAL TYPEWRITING LABORATORY

35 Electric typewriters (30 for class use, 1 demonstration machine, 4 replacement machines)
30 Typewriting tables - 32" x 40" x 28" and adjustable posture chair
30 Copyholders
1 Demonstration stand
1 Teacher's desk - 32" x 54" x 30" and chair, with casters
1 Paper cutter
1 Unabridged dictionary with stand
3 Staplers
1 Long-arm stapler
2 Pencil sharpeners
1 Interval timer
1 Stop watch
2 Four-drawer file cabinets (one with lock)
1 Projection screen (roll-up, spring type)
1 Record player
1 Tape recorder
2 Wastebaskets
Records, discs, belts and/or tapes to correlate with textbook
6-8 Student dictionaries
6-8 Secretarial handbooks

In typewriting rooms a variety of heights of tables should be provided. The distribution of tables among the various heights should approximate the following:

Typewriting Tables

20% of the tables 27 inches high
60% of the tables 28 inches high
20% of the tables 29 inches high

Chairs for Typewriting

20% of the chairs 16 inches high, with casters
60% of the chairs 17 inches high, with casters
20% of the chairs 18 inches high, with casters

VOCATIONAL DATA PROCESSING LABORATORY

12 Student stations (wiring tables or work tables) with straight-back chairs
9 Printing keypunches

3 Verifiers
1 Accounting machine
1 Sorter
1 Collator
1 Reproducing punch
1 Interpreter
1 Teacher's desk - 32" x 54" x 30" and chair, with casters
Air conditioning for data processing laboratory

NOTE: Sufficient control panels for the various machines, movable wires and control panel cabinets must be supplied for the teaching of functional wiring principles.

VIII. Teacher's Qualifications and Governing Policies

A. High School

1. A teacher of vocational business and office education classes must meet the following qualifications.

   a. A bachelor's degree with a minimum of 45 hours in business and office education.

   b. A valid West Virginia teacher's certificate.

   c. One year (2,000 hours) of occupational experience in office work.

2. No vocational business and office education teacher may teach more than 5 one-hour class periods. When a vocational business and office education teacher's schedule requires more than three different preparations, four class periods shall constitute a maximum load.

3. Each teacher of vocational business and office education classes shall keep up to date by participating in summer school courses, in-service training programs, state conferences, and special workshops or seminars which are under the sponsorship of the Vocational Business Education Service.

4. Each teacher-coordinator of a cooperative work-training program must have taught two years in a business education department using a valid certificate.

5. Each teacher-coordinator engaged in a cooperative work-training program shall be scheduled for at least two class periods of each school day for performing program development, placement, supervision and coordinating activities. These shall be the last two periods in the daily schedule.

6. No teacher-coordinator should supervise more than 25 students who are working an average of 15 hours per week.

7. For a teacher-coordinator who supervises 20 or more students who are working, three class periods (in addition to his supervision) shall constitute a full teaching load.

8. The teacher-coordinator shall be employed for three weeks beyond the regular school term; one week shall be for the purpose of attending summer workshops, conferences, etc. The teacher-coordinator must devote full time to the program during the period of extended service.

9. The local board of education shall provide approved mileage reimbursement for transportation expenses for each teacher who supervises students working in the cooperative work-training program.

B. Post-Secondary

1. In general, the same qualifications and governing policies for high school teachers of vocational business and office education classes apply to teachers of post-secondary classes with the following additional requirement:

A teacher of any vocational business or office education class at the post-secondary level must have a master's degree in business education or have entered a master's degree program.

C. Adult

1. In general, the same qualifications for high school teachers of vocational business and office education classes apply to teachers of adult classes in the field of vocational business education.

NOTE: Teachers to be used for special assignments must be qualified through occupational experience, teaching or training to conduct the special instructional assignments. The above requirements for very specialized adult classes may be waived as long as qualified instructors are employed for these special classes.

IX. Youth Organizations

A member of the state advisory staff assigned to vocational business education shall act as the state adviser for the business education youth group which will compliment the vocational instruction offered for business and office occupations in a manner similar to that found in other vocational programs.

This youth organization - Future Business Leaders of America - shall be sponsored locally by a qualified and certified vocational business education teacher.

Membership in the Future Business Leaders of America local chapter shall be restricted to bona fide vocational students enrolled in vocational business and office education courses.

X Allocation of Federal and State Funds

Vocational business education funds may be used only to reimburse on vocational business education programs for students who have recorded vocational objectives in vocational business and office education.

It is recommended that vocational business education classes be organized to qualify as vocational units as soon as possible.

Classes - The following classes may be classified as vocational business education and related subjects: Advertising, Bookkeeping, Business Math, Business English, Data Processing, Office Practice, Office Machines, Retailing, Salesmanship, Shorthand and Transcription, Advanced typewriting and Vocational Office Training.

NOTE: Elementary Typewriting may qualify as a vocational class only when all of the students enrolled have declared office occupational objectives.

Salaries - Salaries for qualified and certified teachers of vocational business and office education classes may be reimbursed at the rate of 50 percent matching funds or less. Combined fractions of different teacher's time in vocational business education classes may also qualify for reimbursement.

Equipment - Federal and State monies may be used to buy additional equipment in order to upgrade present programs and/or to institute new programs.

Reimbursement to County Boards of Education will be based upon criteria derived from data obtained from each requesting educational agency. Definite ratio for reimbursement is determined annually and depends upon several factors--demand, amount of money available, proration of program types, etc.

Funds for equipment will be prorated on a reimbursement basis of 50 percent matching or less to be used for the purchase, repair and maintenance of approved instructional equipment, and specialized furniture and office equipment. Examples are as follows:

1. Electric adding and calculating machines
2. Duplicating equipment
3. Transcribing machines
4. Electronic shorthand and typewriting systems
5. Audio-visual equipment
6. Teaching materials and supplies

Reimbursement may also be made where local school boards enter into lease-rental agreements on office equipment rather than purchasing equipment.

Travel - Reimbursement for travel of teacher-coordinators of work-training programs shall be made up to 100 percent of approved local travel at a rate not to exceed that established for state employees.

Workshop and Conferences - Full travel and subsistence (100 percent reimbursement) will be paid for actual expenses to qualified supervisors, coordinators and teachers of vocational business and office education classes, in accordance with state reimbursement schedules, for attendance at in-service workshops, institutes and conferences planned for personnel improvement and upgrading that are called by area supervisors or the State Supervisor of Vocational Business Education.

XI. Memorandum of Understanding

A memorandum of understanding for a vocational program operation will be submitted by each educational agency desiring to participate in a vocational business and office education program. The intent of the Memorandum of Understanding is to provide a quality vocational education program.

The local educational agency agrees that the instructional program, selection of teachers, required records and reports shall be in accordance with the West Virginia State Plan for Vocational Education. The local educational agency will provide sufficient funds to operate the classes in a manner that provides for adequate vocational instruction.

The state educational agency will assist in providing supervision and in-service education activities designed to improve the quality of instruction.

It is understood that reimbursement on any program will be discontinued whenever that program fails to meet the requirements of the State Plan or when instruction is inadequate. This Memorandum is subject to revision upon agreement between local and state educational agencies involved.

FOREWORD

This report was prepared by staff of the Wisconsin State Board of Vocational, Technical and Adult Education. Contributions are acknowledged from the Wisconsin Department of Resource Development, and the Wisconsin State Employment Service.

Wisconsin Schools of Vocational, Technical and Adult Education have made tremendous strides since the days of the 1909 Interim Committee which recommended the establishment of the system to the 1911 legislature.

Important legislation passed into law by the 1965 Wisconsin Legislature has created new challenges to the citizens of Wisconsin to "Broaden the educational opportunities for the youths and adults of Wisconsin."

The years immediately ahead will see, because of changes in Wisconsin law, the most radical change and improvement in the administration of vocational, technical and adult education in our state's history. Such sweeping change will mean greatly increased demands upon the administration and staff of the State Board of Vocational, Technical and Adult Education. In addition to already substantial efforts to expand programs as needed by our citizens and the employment market, to maintain balance between the traditional craft training and the requirements of modern technology, and to extend service to disadvantaged, unemployed and underemployed, and other special need groups; we can see clearly that thousands of hours of time must go into the planning, interpretation, and implementation of the new state law.

C. L. GREIBER

INTRODUCTION, HISTORY AND PHILOSOPHY

This report describes the history, philosophy, types of schools, programs, and projected plans of the Wisconsin State Board of Vocational, Technical and Adult Education with emphasis on the full-time one and two year non-degree and two-year associate degree programs.

Introduction

Vocational education is as old as man himself. In a broad sense, all education contributes to vocational competency, but vocational education in this report refers to that part of a student's instruction intended specifically to fit the student for work and does not refer to instruction leading directly to a baccalaureate or professional degree.

This report uses the term "Vocational Education" broadly to refer to all formal instruction for both youth and adults, at the post high school level, and out-of-school levels, which prepares individuals for initial entrance into, and advancement within, an occupation or group of related occupations. References to technical education are used to focus attention upon a phase of vocational education having certain unique characteristics usually requiring more rigorous science and mathematics background and more exacting skills. "Adult Education" refers to that education designed for adults who are not enrolled in elementary or secondary schools. Adult Education may be either general, vocational or technical. General education may be part of a vocational or technical curriculum, terminal for self enrichment, or preparatory for transfer toward a baccalaureate degree.

Statement of History

An Interim Committee under Dr. Charles M. McCarthy, a native of Massachusetts, was established in 1909 to study the problems of young workers. The recommendations of this committee became law in the legislature of 1911, creating the state system of vocational schools.

Section 41.13 of the Wisconsin Statutes as amended relates to the State Board of Vocational, Technical and Adult Education, and directs it to "have control over all state aid given to schools of vocational, technical and adult education.....determine the organization, plans, scope, and development of vocational education." This chapter also designates the State Board as the agency to administer federal legislation aiding and affecting vocational education in the state. The statute provides that the Board shall have 11 members; three to be farmers, three employees, three employers, plus the State Superintendent of Public Instruction and a member of the Industrial Commission. The board establishes policies and selects a State Director, who directs the state staff required to carry out the policy directives of the Board.

The state staff supervise programs operated by local vocational, technical and adult schools. Currently there are 64 local boards, 23 of them operating vocational evening schools, 41 of them operating vocational, technical and adult schools offering a fuller range of both day and evening programs. In addition the state staff supervises work in vocational agriculture in 270 high schools and vocational homemaking in 140 high schools.

Programs supervised by the State Board include only those which train for employment or for useful occupations in the home. Local programs of an avocational, recreational, or craft nature are entirely locally supported, and receive no state support. In the period 1950-1964 enrollments in the State Board supervised programs in vocational, technical and adult schools more than doubled, increasing from 70,000 in 1950 to nearly 148,000 (aided), in 1964-65. Additionally, over 31,000 young people and adults were enrolled in the high school agriculture and homemaking programs supervised by the State Board staff. This totals nearly 180,000 students, ranging from part-time instruction at beginning vocational levels to full time students in advanced industrial and business technologies.

In the year's since the establishment of the vocational system in Wisconsin in 1911, federal acts administered by the Board include the basic Smith-Hughes Act (1917) which marks the first effort of the federal government to support vocational education. This work was extended by Title I of the George-Barden Act, in 1946, which provided more funds and broadened the areas of study. In 1956 Title II of the George-Barden Act was passed, providing funds for vocational training in the health occupations. In 1958, the National Defense Education Act, providing federal funds for educating highly skilled technicians needed in defense industries, substantially affected the programs and equipment of Wisconsin Vocational Schools on a continuing basis.

The Area Redevelopment Act of 1961, and the Manpower Development and Training Act of 1962 placed more responsibility on the system for training and retraining unemployed or underemployed workers in depressed areas or victims of technological change. Nearly 80% of the workers who completed these programs in our state are now gainfully employed in the field for which they were trained.

In 1962, responsibility was given the Board for administration of programs under the Civil Defense Education Act. Passage of the Vocational Education Act of 1963 made substantial changes in the groups who could be served and permitted flexibility in the use of federal funds. This Act permits use of funds for the following purposes:

(1) Vocational education for persons attending high school;

(2) Vocational education for persons who have completed or left high school and who are available for full time study in preparation for entering the labor market;

(3) Vocational education for persons who have already entered the labor market and who need training or retraining to achieve stability or advancement in employment;

(4) Vocational education for persons who have academic, socioeconomic or other handicaps that prevent them from succeeding in the regular vocational education program;

(5) Construction of area vocational education school facilities;

(6) Ancillary services and activities to assure quality in all vocational education programs, such as teacher training and

supervision, program evaluation, special demonstration and experimental programs, development of instructional materials, and State administration and leadership, including periodic evaluation of State and local vocational education programs and services in light of information regarding current and projected manpower needs and job opportunities.

The Economic Opportunity Act of 1962 places a responsibility on the State Board in providing Adult Basic Education under Title II-B and such other education and training required under other titles of the Act.

Philosophy and Objectives

The Wisconsin Schools of Vocational, Technical and Adult Education are organized and operated for the purpose of developing and maintaining such educational opportunities and services for young people and adults as to enable them to become occupationally competent, to better understand their responsibilities of citizenship, home and family life, to improve their health, and to help them appreciate those things which will enrich their lives.

Following are the basic concepts underlying Wisconsin vocational, technical and adult education:

1. Educational opportunity shall be provided for all the people:
   The people in a democracy, regardless of social or economic level, should have equal educational opportunities available to them.

2. Educational needs of people, as they continue throughout life, change and vary:
   As each person matures and meets the actual problems of his life, he acquires new needs and interests. As individual economic problems differ and as conditions and practices in industry change, the problems and responsibilities of intelligent citizenship also become increasingly difficult and involved.

3. Not all educational needs are met today by traditional school organization:
   Many of the basic educational needs of Wisconsin's citizens are being well met by the elementary and high schools, the colleges and the university of the state. There still remains the need for education to make a more skilled, confident and purposeful citizenry. This need can and should be met by the Wisconsin Vocational, Technical and Adult Schools.

4. Education for productive work is one of the greatest needs:
   Education for life work, training that enables the individual to earn a living in a socially useful manner, is important to all people in Wisconsin. It is also basic to the total prosperity of the state. The good things in our lives today

have been made possible by the work of men. Further productivity will depend upon wider knowledge and improved skills. The Wisconsin Vocational, Technical and Adult Schools stand ready to develop those skills, knowledges and attitudes necessary in a rapidly changing society.

5. National strength and national defense are dependent upon the productive capacity of all the people:
Nations today are not dependent for their protection upon military force alone. They are strong only to the extent that their people have resourcefulness, productive skill and the common understandings that undergird their unity. The Wisconsin Vocational, Technical and Adult Schools can and do contribute to the productivity of the people and to the strength of the nation.

Although the basic philosophy remains about the same as time marches on, the programs and curriculums change to meet changing needs of people and business and industry.

PROGRAMS AND PROGRAM DEVELOPMENT

Comprehensive programs in depth and unique techniques in the development of these programs are characteristic of the Wisconsin system of vocational, technical and adult education.

Programs

The primary purpose of the Wisconsin Schools of Vocational, Technical and Adult Education is to provide educational opportunities for individuals throughout their lifetime. Since these needs vary and change, the vocational, technical and adult schools are called upon to provide a wide range of educational programs and services.

These schools attempt to meet the varied needs of people through the following types of programs:

1. The junior college
2. The technical institute
3. One and two-year vocational programs
4. Special vocational programs
5. A variety of special educational services

Through advisory committees, vocational, technical and adult education is made responsive to the needs of all the people. The basic pattern of these educational services made generally available include:

a. General continuation
b. Occupational preparation
c. Occupational extension
d. Home Economics and Family Living
e. Related instruction for apprentices
f. Adult education of a civic, cultural and avocational nature
g. Vocational-technical programs
h. Education for the retired adult
i. Adult high school
j. Adult counseling and guidance
k. Special rehabilitation and homebound educational service.

Please refer to the attached State Board's publication "Opportunities Through Education in Wisconsin Schoolsoof Vocational, Technical and Adult Education" for further details on descriptions of programs and locations of schools.

Program Development

To develop and conduct the various types of programs needed to meet the needs of people, agriculture, business and industry various methods, techniques, and procedures are used.

A local school which desires to develop a new program submits a proposal to the State Board where it is reviewed with the State Advisory Committee.

Many other schools, other than those shown on the chart, offer one and two year programs in these fields of study. Please refer to the following pages for schools offering these, and other programs. Information on special types of programs will be found on the last pages of this bulletin.

Programs, courses, classes and curriculums are planned on the basis of local, statewide, regional, and national needs with each school, program unit, and curriculum offering planned to meet an appropriate part of the overall needs. In addition to public relations efforts, programs maintain effective functional relationships with employers, employee groups, agricultural groups, and other agencies, through appropriate utilization of approximately 300 occupational advisory committees and Joint Apprenticeship Committees composed of employers and employees. These committees function on both the State and local levels. Names and records of activities of these committees are on file at the State Board and local school offices.

Ad Hoc Committees are also used during developmental phases of programs. A liaison committee composed of representatives from the State Board of Vocational, Technical and Adult Education and the Wisconsin State Employment Service facilitates the responsiveness of training programs to business and industrial needs.

The employment service provides labor force and occupational information; conducts area and statewide occupational surveys, skill surveys and studies of individual occupations or clusters of occupations on a statewide or area basis.

The State Board and local schools also conduct local occupational need and occupational content studies. Follow-up studies are conducted on a local level to assist in curriculum planning. Many studies are conducted cooperatively.

The initiation of these studies may be suggested or requested from various sources, including instructors, administrators, curriculum personnel, employers, employees, labor unions, and various governmental, public or private business and industrial associations and organizations at all levels.

Various teacher workshops, seminars and other professional improvement activities are conducted on local and state levels to facilitate the development and improvement of instructional programs.

The Wisconsin Schools of Vocational, Technical and Adult Education do not create job opportunities; they attempt to provide appropriate education and training for jobs that exist or are likely to emerge in a rapidly changing technological society.

PROJECTIONS

Plans for the future should be based on realistic projections of factors affecting that future whenever possible.

This section pertains to projections of future labor force needs for Wisconsin, enrollment potentials, staff personnel needs, and the need for additional space and facilities. Much of the information has been developed by other state agencies.

I. The Future Labor Force Needs for Wisconsin

Proper planning of future vocational education programs requires consideration of a forecast of the state's future manpower needs. The following information was developed by the Area Vocational School District Planning Committee in 1966 based on data from the Department of Resource Development and the U.S. Bureau of Census, and Consultation with the Wisconsin State Employment Service.

A. General Considerations

Any labor force projection which projects 10 to 15 years in the future, as this one does, must necessarily be viewed somewhat cautiously because it is impossible to project what economic, social and political circumstances will be affecting the job market in later years. This forecast, made after consultation with personnel of the Wisconsin State Employment Service, gives rough indications of future occupational growth and indicates trends that are likely to occur in the job market. It is accurate to the extent that any forecast, based on recent evidence (1950 to 1960) and judgments regarding present and the future economic situations, can be accurate.

B. The Significance of Rapidly Advancing Technology

Wisconsin's economy is responsive to trends and circumstances at work throughout the nation. Thus, large segments of Wisconsin industry, including lumber and wood products, paper and pulp manufacture and machinery manufacturing are all affected by the adoption of new manufacturing processes developed in other states, the desire to locate near growing centers of population and many other factors.

Nationally, the last 15 years has witnessed very rapid changes occuring in the agriculture industry. Throughout the nation, small acreage and low income farms decreased while average farm size and the degree of product specialization increased. These same agriculture industry trends have exhibited themselves throughout Wisconsin's agricultural industry.

The most significant factor that has led to the growth and extinction of jobs in Wisconsin and the nation is the emergence of a rapidly advancing technology.

The rapidly advancing technology is characterized by the introduction of automation and computers into industry and commerce. Automation, in turn, is characterized by a class of devices that automatically perform both the sensing and motor tasks formerly performed by human labor. Computers are those devices which rapidly perform traditional human tasks involving experience, memory, analysis. logic and elementary decision-making.

The design of more sophisticated tools and processes to produce better products in quantity has always characterized man's development. Thus, the invention of better methods of accomplishing work tasks may be a satisfactory definition of technology. But the significant aspect of today's technology is the rapidity with which better methods are invented to complete work tasks.

Rapidly advancing technology is largely responsible for creating the greatly expanded need for technicians. It has, on the other hand, greatly reduced the need for unskilled labor and farm workers. Within the next 14 years, it will reduce the need for semi-skilled operatives, such as machine operators.

Today, only a small portion of our entire labor force performs hard, physical labor. And, some autorities believe, better machines can - and are - being constructed to lift the remaining physical labors from the backs of our unskilled labor force. Increasingly, work demands the utilization of cognitive skills to the exclusion of the manipulative abilities.

C. The Wisconsin Work Force Projection

The following section analysis and discusses statistical data contained in Tables A & B.

Table A, shown on page 9, shows the actual occupational percentage distribution of the Wisconsin civilian employed labor force in 1960 and projects occupational percentage distributions for 1970, 1975 and 1980. This Table indicates what percentage of the total employed civilian labor force, in selected years, is projected to be employed in various occupations.

Table B, gives the projected numerical and percentage change in employment for all the selected occupations from 1960 to 1970, 1975 and 1980.

D. Analysis of Statistical Tables

1. General Table A indicates that in 1960, Wisconsin had fewer White Collar Workers than Blue Collar Workers. By 1970, however, Wisconsin will have more White Collar Workers than Blue Collar for the first time in its employment history. From 1970 to 1980, the percentage distribution of White Collar jobs compared to total work force will increase by 3.4% compared to a decline of 4.0% in Blue Collar distribution. This indicates that more of the increased job opportunities of the 1970's will be White Collar than Blue Collar in nature.

Despite the increase in the percentage distribution of White Collar jobs, over 30% of the state's entire labor force will be engaged in Blue Collar occupations by the end of the 1970's. Large numbers of job opportunities will exist in these occupations for the next 15 years and the V.T.A. schools will be required to train these workers and retain large numbers of other Blue-Collar workers.

2. Occupation-by-Occupation Analysis

a. Professional Workers (include persons who have at least a four year college degree or specialized talents, such as engineers, doctors, school teachers, lawyers, clergymen, musicians, and medical and health workers.)

Occupational Growth from 1960 to 1980 = 97,300

Professional workers are projected to show the largest numerical gain of any occupational group from 1960 to 1980. With a few exceptions, such as accountants, pre-professional employment training is conducted by the state's colleges and universities. The large growth in professional employment will be due to technological and population growth in the next 14 years.

b. Electrical, Mechanical, Engineering & Related Physical Science Technicians

Occupational Growth from 1960 to 1980 = 25,500

These technical workers, who do not represent the total number of technicians employed in the labor force, are projected to show the largest percentage growth of any occupational group in Wisconsin (1960 to 1980). Growth in electrical, mechanical, and engineering technician employment is projected at 255% from 1960 to 1980. This increase is directly attributable to industry's increased reliance on automated devices and other mechanical means for the production of goods. Consequently, technicians are needed to design, conduct and test these devices.

c. Managers, Officials and Proprietors, Except Farm (includes store buyers, building managers and superintendents, union officials, inspectors and government officials, managers of retail and trade establishments, such as grocery stores, service stations, etc.)

Occupational Growth from 1960 to 1980 = 28,800

Moderate growth in managerial occupations is anticipated for the next 14 years if the current trend toward consolidation of retail trade outlets continues in Wisconsin. The growth of chain stores and shopping centers or plazas has reduced the number of smaller, independent retail outlets throughout the state. The total percentage of the Wisconsin labor force engaged in managerial occupations is projected to increase from 1970 to 1975 and then return to its 1970 percentage in 1980.

d. Clerical Workers (includes secretaries, stenographers, typists, bank tellers, cashiers, file clerks, business machine operators, receptionists, etc.)

Occupational Growth from 1960 to 1980 = 87,300

This occupational group is projected to experience the second highest numerical growth rate during the 1960 to 1980 period. Large numbers of technically trained workers will be needed in the clerical area.

e. Sales Workers (includes advertising agents and salesmen, demonstrators, insurance agents, retail salesmen and saleswomen, stock and bond salesman, merchandizing agents.)

Occupational Growth from 1960 to 1980 = 31,700

Moderate growth is anticipated in the sales occupations for the next 14 years. This projection is based on the assumption that consolidated retail outlets will employ most of the sales personnel that otherwise would be employed by small outlets and, in addition, moderate numbers of sales personnel will be needed to fill additional jobs. Graduates of vocational school Associate Degree Business programs are expected to find ample job opportunities in this occupational area.

f. Craftsmen and Foremen, (exclusive of farm foremen) (includes brickmasons, carpenters, electricians, painters, plumbers, roofers, machinists, bakers, tailors, shoemakers, watchmakers, compositors and typesetters, auto mechanics, construction and manufacturing foremen, etc.)

Occupational Growth from 1960 to 1980 = 53,000

Craftsmen and foremen are projected to show substantial numerical growth throughout the 1970's. This occupational category will employ approximately the same percentage of the total employed civilian labor force in 1980 as it did in 1960, indicating that the complex skills practiced by this occupational group, as yet, cannot be duplicated by machinery. There are exceptions to this (e.g. the printing trades), and the growth of this occupational group will be affected by the introduction of new, sophisticated machinery. V.T.A. schools will be required to offer opportunities for upgrading the skills and job knowledge of skilled workers.

g. Semi-skilled Operatives (Examples include assemblyline workers, laundry and dry cleaning operatives, oilers, greasers, mine operatives, stationary engineers, etc. In general, semi-skilled operatives are individuals who perform repetitive, manipulative functions with machinery).

Occupational Growth from 1960 to 1980 = (-) 12,300

Although semi-skilled employment is projected to increase from 1960 to 1970, very small growth is projected to 1975 and a rapid

decline is projected for 1975-1980. Technological advances in industry make the semi-skilled occupations highly susceptible to job reduction. The rapidity with which Wisconsin industry desires to introduce automated devices will largely determine when decreases in the semi-skilled work force will appear. Young workers entering the semi-skilled occupations in the 1960's may be faced with lay-offs after 1975. Relatively few new job opportunities in the semi-skilled occupations will be available in 1970 to 1975 period and these persons hired in the early 70's may be faced with lay-offs in the 1975 to 1980 period.

In 1960, more Wisconsin workers were employed in the semi-skilled occupation area than any other occupational area (20.4% of the total employed labor force). By 1980, the percentage of semi-skilled workers to total employed is projected to decline to 15.4% of the total employed labor force.

h. Laborers (exclusive of farm and mine) (examples include car washers, gardners, dock workers, lumbermen, teamsters, warehousemen, etc. No skill or job knowledge is required for entry into these occupations.)

Occupational Growth from 1960 to 1980 = (-) 12,300

In 1960, unskilled laborers in Wisconsin occupied the smallest numerical and percentage porportion of our employed labor force. This indicates that technological advances in Wisconsin industry had reduced the need for laborers to low numbers prior to 1960. This projection forecasts a continued decline in the need for laborers. Although the decline in laborers, as a percentage of the total work force is considerable from 1960 to 1980, the numerical decline is less than might be expected because the 1960 numerical unskilled labor employment was low. (See Table B)

With periods of severe labor shortage, such as Wisconsin is experiencing now, unskilled laborers find employment opportunities are good. However, with a return to "normal" economic growth patterns and a surplus labor supply, unskilled laborers frequently find job opportunities are scarce. Moreover, without skill training, laborers frequently find themselves tied to "low status", low-paying jobs with very insecure job futures.

i. Agricultural Occupations

As mentioned previously, Wisconsin farming has been greatly affected by national trends, including product specialization and the introduction of labor saving farm machinery. Although Department of Labor statistics indicate a decline in numbers of farmers and farm laborers, the area of agricultural occupations is one of the most dynamic and extensive occupational fields in existence in Wisconsin. While the harsh realities of the highly competitive business of farming are reducing the number of farms and farm operators, the size of farm operations is constantly increasing

and the number of persons employed in providing essential supplies and services which make the miracle of modern farming possible remains large and apparently is expanding. The various services necessary in marketing agricultural production employ additional substantial numbers of persons needing agricultural knowledge and skills.

The following statistics taken from the "Midwest Agribusiness" report of October 1966 which was prepared by the Midwest Association of Departments of Agriculture, reflects the scope of agricultural occupations in Wisconsin.

Total Employment in Agricultural Occupations in Wisconsin in 1965

Occupational Areas	Totals
Farm Employment	
Family farm workers	208,000
Hired farm workers	23,000
Total farm workers	231,000
Non-Farm Agribusiness workers	369,000
Total Agribusiness workers	600,000
Total Labor Force in Wisconsin	1,587,000

j. Service Related (includes private household workers such as baby sitters, housekeepers, laundresses, and other service workers such as policemen, watchmen, firemen, guards, waiters, cooks, bartenders, barbers, hairdressers and janitors.)

Occupational Growth from 1960 to 1980 = 80,400

The numerical growth in this occupational group is only surpassed by professional and clerical employment growth. Population growth throughout the 1970's will increase the need for housekeepers, laundresses and child care personnel, it is doubtful whether an adequate supply can be furnished, since many of these occupations are considered "low status" jobs. The state's vocational schools currently have training programs for entry into service related occupations. For example, Associate Degree programs in Restaurant and Hotel Cookery are available.

The State's Need for Skilled Workers - An analysis of a Wisconsin State Employment Service report on manpower needs (1962-1967) showed that in 1962, approximately 51,500 of 106,300 selected skilled workers were required to have completed an apprenticeship program before entering their occupations. Total need for this kind of skilled worker was projected to increase to 136,200 workers in 1967. If the same percentage of these workers

were required to have apprenticeship as was required in 1962, 65,376 apprenticed workers would be required in 1967, or an increase of 13,926 over 1962. Approximately 6,100 additional apprentices will be added to the labor force from 1962 to 1967, or roughly 44% of the 13,926 additional apprenticed skilled workmen needed by 1967. In 1970, the labor force forecast projects that the state will need approximately 21,000 new skilled workers (over 1960); in 1975, the need will be approximately 11,400 (over 1970); in 1980, the need will be approximately 9,900 (over 1975). At the 1966 projected level of apprenticeship completions (1,150), the State's Apprenticeship program may be expected to produce 5,570 of the total new skilled workers needed from 1970 to 1975 (or 50% of the total need) and 58% of the total new skilled workers needed from 1975 to 1980.

Projecting the Need for Technicians - The shortages of technically trained individuals indicated below do not portray the full need for this type of trained worker.

The total need cannot be accurately projected because technical job titles now in existence were completely unknown or unidentified 10 to 15 years ago. Scores of technician jobs will be created in the next 10 to 15 years which are unheard of at this time. For these reasons, the material below is confined to commenting on technical occupation growth in areas where job titles will remain relatively the same from 1960 to 1970.

Technician Manpower Needs - Employment growth in electrical, engineering and other physical science technical occupations is projected at 8,300 between 1960 and 1970. At least another 17,200 of these technicians will be needed between 1970 and 1980.

Based on the evidence at hand, it appears that the vocational-technical schools will be unable to provide the needed number of these technicians unless facilities are expanded during the remainder of the 1960's.

In the Fall of 1964, the Vocational-Technical Schools were forced to turn away 2,000 students who applied for entrance into Associate Degree Programs. In the same year, approximately 530 second year Associate Degree candidates were expected to get degrees in the physical science technician fields. Approximately 800 persons were anticipated to enroll in physical science Associate Degree programs in 1964-65, the last year which had space to accommodate them. Assuming that the program enrollment must remain relatively at 1964-65 level throughout the 1960's, (because limited space is available) we may expect approximately 730 graduates in the physical science area for each year from 1965-66 through 1970. (Total graduates, 1964-70, 4,190)

If the State Board approves all two-year, full time non-degree physical science technical programs in existence in 1963-64, and 1964-65 as Degree programs, this added source of manpower will

TABLE A

ESTIMATED PERCENTAGE DISTRIBUTION OF THE EMPLOYED CIVILIAN LABOR FORCE IN WISCONSIN, BY OCCUPATION 1970, 1975, and 1980

	YEARS			
	1960 (Actual)	1970	1975	1980

FEDERAL WOMEN'S BUREAU, SEPTEMBER 1964

A release indicated that in August 1964 approximately 26 million women were in the labor force. This was 37 per cent of all women 14 years and over, and was 34.7 per cent of all workers. The average age of employed women was 41 years. The major occupational groups in which women were employed (April 1964) were:

31 per cent clerical
15 per cent service workers (exclusive of domestic work)
15 per cent operatives
13 per cent professional and technical, including 1 1/2 million teachers (6%)
10 per cent household workers

produce approximately 1,600 additional physical science technicians from 1963-64 to 1970. (Because limited space is available, program enrollments in non-degree courses beyond above 1964-65 levels will be limited.)

Approximately 25% of the 1964-65 part-time enrollment in Associate Degree physical science technician courses will earn their degrees by 1970, or 360 individuals.

In total, the Committee believes that 6,400 electrical, engineering and other physical science technicians should graduate from vocational, technical and adult schools in the 1960's. (Approximately 250 of these had earned their degrees and entered the labor force from 1960 to 1963-64.) Our shortage in this area, by 1970, will be approximately 1,700.

The 1960-70 employment growth in clerical occupationals, such as secretaries, key punch operators, court reporters, etc., is projected at 43,500. At least 30% of this total will need advanced training of the Associate Degree caliber to gain entrance into clerical occupations throughout the 1960's. At 1964-65 enrollment levels, the Office and Distributive Full and Part-Time Associate Degree Programs, such as Secretarial Science, etc., should produce 11,000 to 11,500 of the required 13,000 needed workers, leaving a shortage of 1,500 to 2,000 properly trained persons.

The State's 1960-70 growth and replacement rate for Practical Nurses and Medical Assistants is expected to require approximately 3,500 additional personnel trained in these medical specialities. If the 1964-65 enrollment in vocational school one-year Practical Nurse and Medical Assistant programs is continued throughout the 1960's, it is anticipated that the State will have a shortage of 400 to 500 practical nurses and medical assistants by the close of the 1960's.

II. Enrollment Potentials*

Two projections of potential full-time enrollments have been prepared. The low projection is based upon state-wide enrollment trends since 1953-54 and rests upon the following assumptions:

1. Evening and part-time day class enrollments will continue to increase in the future at about the same rate as they did between 1953-54 and 1963-64. The trend in enrollments in such classes was fairly consistent during that period, and there are no foreseeable events that would tend to alter that trend.

2. Full-time day class enrollments are increasing and will continue to increase in the future at about the same rate as they did between 1960-61 and 1963-64. This assumption reflects the tendency for these classes to grow more rapidly in recent years as a result of the increased demands by industry for more highly skilled labor, and the increased aids for the establishment of these programs.

* Source: Wisconsin Department of Resource Development

TOTAL STUDENT ENROLLMENTS
1953-1980

HIGH AND LOW PROJECTIONS

Full-time post high school opportunities were made available in nearly 40 of the schools last year, covering nearly every field which can be most effectively taught at the 13th and 14th year levels.#

3. Non-aided and compulsory enrollments will remain at about their current levels in the future. This assumption reflects the declining emphasis on these classes during the past decade. (Recent legislation will probably cause a decrease in compulsory enrollments).#

The high projection is based upon regional enrollment potential projections and it rests upon the following assumptions:

1. Evening, part-time day and full-time day enrollments in areas that have had relatively high enrollment rates will increase at about the same rate in the future as they have in the past, while enrollments in areas that have had relatively low enrollment rates will rise more rapidly in the future than they have in the past. This assumption reflects an anticipated strengthening and diversification of programs in those areas that now have relatively weak programs. Because the strengthening of these weak programs rests upon a number of factors including staff competence, public interest and acceptance of vocational-technical education, and community willingness to finance a strong program, these potentials may not be realized, in many cases, by 1970. They could, however, be more representative of longer range (1980) enrollments.

2. Non-aided enrollments will remain at about their current levels, although there will be some year to year fluctuations.

The accompanying graph (prepared early in 1966 and based upon enrollment trends to 1963-64 and population projections) visually portrays past trends and projected potentials. Both projections indicate a substantial potential for increased enrollments in the future. Under the low projection total enrollment could grow from its 1963-64 level of 176,318 to 237,000 in 1970 (a 34 per cent increase), and to 348,500 in 1980 (a 98 per cent increase). (See Table) Under the high projection total enrollment could grow to 266,800 in 1970 (a 51 per cent increase) and to 394,500 in 1980 (a 124 per cent increase). Since neither of these projections take into account the potential enrollments represented by those turned away from classes in recent years because of a lack of both space and qualified instructors, they may be regarded as relatively conservative estimates.

Associate Degree Students

The traditional forms of vocational education have developed manipulative skills which are needed to perform particular jobs or operations. Advancing industrial, business and home economics technology, however, has produced

State Board of Vocational, Technical and Adult Education

a growing need for persons who can perform certain manipulative tasks and, in addition, have a grasp of theoretical subject matter. Simply stated, these persons occupy a "middleground" between productive workers and the persons who plan and manage plant or industry operations. Equally important, these "middlemen", or technicians, have the ability to assist research personnel in developing, designing or testing new devices which lead to dramatic increases in industrial productivity.

Since technicians perform so many varied tasks, and technician responsibilities vary greatly between industries and organizations, it is nearly impossible to formulate an all encompassing definition of the technician's job. Moreover, the technician's job role may change rapidly from one year to another, depending on the supply of highly skilled and professional manpower. The scarcity of professionally trained or highly skilled manpower in a particular industry means the technician's role is a broad one. At plants or organizations with sufficient skilled and professional workers, the technician's role may be more restricted.

The State's vocational education institutions have been training technicians on a full-time basis since 1959. Our present technician training program is designed to provide the student with basic manipulative skills with the addition of courses in mathematics, science, psychology, social science, human relations and communications skills. Upon completion of a full-time, two-year curriculum, the student is awarded the Associate Degree and is prepared for employment. Presently, there are 102 Associate Degree programs approved in the system.

Non-Degree Students

In 1964-65, 4,668 persons were enrolled full-time in skill upgrading courses less than two years in length. These persons may be distinguished from Associate Degree candidates by: (1) the length of their training periods and (2) the emphasis of their training upon manipulative skill development rather than cognitive skill training.

Although trainees in this category may be exposed to some of the general education training given technicians (such as human relations), the comprehensiveness of general education is not as great as that given Associate Degree students. In many courses, such as Practical Nursing, certificates are awarded to enrollees who successfully complete their studies.

About 22% of the total 1964-65 enrollment in this student category were engaged in learning new clerical skills; another 20% were preparing for jobs in the skilled industrial occupations; 6% were studying barbering and hairdressing (service trades) and 23% were studying practical nursing and medical or dental specialties. The remaining 19% were engaged in skill training for business, graphic and applied arts and other occupations.

Collegiate Transfer Students (Liberal Arts)

Chapter 292 states that the State's Vocational, Technical and Adult Schools may offer liberal arts' collegiate transfer programs at locations

where there are: (1) no existing institutions of higher education, or (2) in cities of 150,000 or more population, even though these cities have existing institutions of higher education. At present, one liberal arts transfer program is in operation throughout the vocational school system. This is located at the Milwaukqe Institute of Technology. The program had full and part-time enrollment of 5,360 in 1964-65. In addition, the Madison Vocational, Technical and Adult School has been provisionally accredited by the North Central Association of Universities and Colleges to offer college transfer courses.

Liberal arts transfer opportunities offered in the future will depend largely on the student groups served at vocational education facilities. These programs could serve only high school graduates who can meet the admission standards of the state supported universities, or they could serve all high school students who apply for admission.

Other Students

In addition to the students pursuing full-time associate degree, non-degree and collegiate transfer programs there were approximately 2,000 students enrolled full time in Manpower Development and Training Programs in January, 1966.

In 1963-64 there were over 61,000 persons enrolled part time in day or evening courses to upgrade present skills and knowledges. There were approximately 36,000 persons enrolled in avocational education opportunities and approximately 22,000 were enrolled in federally and state aided home-making courses on a part-time basis during the 1963-64 school year. No state aid is paid for arts and crafts avocational courses.

Over 19,400 persons were served by the Division of Vocational Rehabilitation in 1965-66. Other students also are enrolled in Civil Defense education, Driver Education, and Adult Basic Education. Demands for avocational courses are likely to increase in the years ahead because of shorter weeks and an increase in population over 65 years of age.

III. Staff Personnel Needs

As vocational education programs expand and as other programs are initiated, the need for personnel in supervisory, research, teacher training and subject matter positions expands concomitantly. Many are predicting that the supply of trained personnel at all levels may be the most critical limiting factor in meeting the new demands now facing vocational education. If this phase of our educational program is to meet the needs of the future, we must have men and women with the education and background in occupational training so essential to successful teaching.

The need for personnel will be critical at all levels, from teachers through supervisory personnel on local, district and state levels.

In a study of "Personnel Needs and Supply in Vocational, Technical Education above Local Teacher Level" conducted by Bill W. Stevenson at Oklahoma

GRAPH SHOWING NUMBER OF PROVISIONAL TEACHING CERTIFICATES ISSUED

Wisconsin State Board of Vocational, Technical and Adult Education

TABLE SHOWING NUMBER OF
PROVISIONAL CERTIFICATES ISSUED

DATES	NUMBER
9-1-61 to 8-31-62	72
9-1-62 to 8-31-63	121
9-1-63 to 8-31-64	106
9-1-64 to 8-31-65	202
9-1-65 to 8-31-66	275
9-1-66 to 8-31-67 (Estimated)	375
9-1-67 to 8-31-68 (Estimated)	500

State University in 1966, conclusions were:

1. There is presently an extreme shortage of qualified personnel for positions of leadership in vocational education.

2. This shortage will become more severe as present programs are expanded and new programs are added.

3. Some program of leadership development and training must be initiated if vocational education is to fulfill the commitment of the Vocational Education Act of 1963.

The study shows that in general the supply of graduates above the baccalaureate level would fill 50 per cent of the demand for vocational education personnel at the state and district levels, if all were available for these vacancies. When we consider that many of those receiving Masters Degrees will go back into or remain in teaching, the situation becomes even more acute.

In Wisconsin, the issuance of the Provisional Teachers Certificate is a strong indication of the number of new teachers employed. This would include replacement of teachers as well as additional teachers needed due to expansion. See the accompanying graph and table indicating number of provisional certificates issued annually from 1961-65 and the projected number needed for 1966-67 and 1967-68. The projections show that for 1966-67 we would employ 375 new teachers requiring provisional certificates and approximately 500 would be needed for 1967-68 school year. In a telephone survey of four schools it was ascertained that for every new teacher needed for replacement due to retirement and other reasons a new teacher is also needed due to expansion of programs and other reasons. This ratio of 1:1 compares favorable with National projections from U.S.O.E.

For the school year 1965-66 we employed 886 full-time teachers and had a total full time enrollment of 15,612. This is a ratio of one full-time teacher to nearly 18 full time students. On the basis of high and low projected enrollments and on the basis of an 18:1 ratio of full time teacher to full time enrollments we would be employing approximately 1139-1411 full time teachers in 1970 and 2433-3000 full time teachers in 1980.

The above projections refer to teachers only. No projections have been made regarding additional guidance and supervisory and administrative personnel needed in Wisconsin. As vocational, technical districts are developed there will be a need for supervisory and administrative personnel on the district level.

IV. Space Needs*

Two space needs estimates are presented here. One is an estimate of the total space necessary in vocational-technical school facilities to

* Source: Wisconsin Department of Resource Development

accommodate the current enrollments and to correct the glaring space deficiencies such as those in library, office and non-assignable space. The other estimate is of the long range need for additional space to meet anticipated increases in the total number of student hours of instruction that vocational, technical and adult schools will be called upon to provide in the years ahead.

Hours of Instruction

The projections of student enrollments tend to understate the extent of the demand for vocational-technical education facilities because the full-time student who may attend classes 20 or more hours a week and the part-time or evening student who may attend classes as little as an hour a week are often each counted as one enrollment. These projections have, therefore, been converted to projections of hours of instruction per week.

Since full-time enrollments are expected to comprise an increasing proportion of all enrollments the number of class hours of instruction per week will increase more rapidly than the number of students enrolled. Student hours of instruction are expected to increase between 163 and 198 per cent by 1980 compared to an anticipated increase of only 98 to 124 per cent in students enrolled.

PROJECTED ENROLLMENTS AND HOURS OF INSTRUCTION,
VOCATIONAL-TECHNICAL SCHOOLS

	Students Enrolled		Hours of Instruction Per Week	
Year	Number	% Change	Number	% Change
1963-64	176,318	--	520,500	--
1970 High Projection	266,800	51	944,100	81
Low Projection	237,000	34	800,200	54
1980 High Projection	394,500	124	1,548,600	198
Low Projection	348,500	98	1,367,000	163

ESTIMATED CURRENT FLOOR SPACE DEFICIENCIES,
VOCATIONAL-TECHNICAL SCHOOLS

	Existing Space (Sq. Ft.)	Additional Space Needed (Sq. Ft.)
Assigned Active Instructional		
Classroom	289,330 Sq. Ft.	-119,600 Sq. Ft.

Assigned Active Non-Instructional	327,140	26,400
Non-Assignable and Inactive	548,120	126,000
Total	2,236,030 Sq. Ft.	370,800 Sq. Ft.

Source: Wisconsin Department of Resource Development

Long Range Needs

Accommodation of potential enrollments may require the addition of 1,500,000 to 2,200,000 square feet of vocational-technical school floor space between 1965 and 1970. (See Table). This amounts to an 88-122 per cent increase in existing space. An additional 3,200,000 square feet of floor space may be required to accommodate enrollments estimated for 1980. Over the next 15 years, therefore, vocational-technical school space may have to be increased 222-264 per cent in order to meet potential demands.

These estimates are for the 35 vocational-technical school facilities now owned and/or operated by vocational school boards that replied to the 1964 space survey. Additional space, not estimated here, may also be required to meet enrollment increases in the form of schools that did not reply and in those classes which are conducted in other kinds of buildings such as high schools and elementary schools.

ESTIMATED FLOOR SPACE NEEDS, VOCATIONAL-TECHNICAL-ADULT EDUCATION SCHOOLS, 1964, 1970, 1980

	Additional Space Needed (Sq. Ft.)			
	1964	1965-70	1970-80	Total
To Correct Current Deficiencies:	370,800	---	---	370,800
To Meet Long-Range Needs:				
1965-1970				
High Projection	--	2,229,000	---	2,229,000
Low Projection	--	1,474,000	---	1,474,000
1970-1980				
High Projection	--	---	3,176,000	3,176,000
Low Projection	--	---	2,991,000	2,991,000
1965-1980				
High Projection	--	2,229,000	3,176,000	5,405,000
Low Projection	--	1,474,000	2,991,000	4,465,000

Construction Costs

Assuming an average cost of $22 per square foot of space, an estimated $32,400,000 - $49,000,000 may need to be expended to meet 1970 space needs. (See Table) Between 1970 and 1980 an additional $65,900,000 - $69,900,000 may need to be expended for new vocational-technical school construction in order to meet growing needs. This amounts to an average annual construction expenditure of $7,300,000 - $8,700,000 per year in the period 1965-1980. If expenditures to correct current deficiencies are also included and spread over the 15 year period, average annual expenditures would have to amount to $8,300,000 - 9,400,000 per year. See Table below.

ESTIMATED NEEDED CONSTRUCTION EXPENDITURES, VOCATIONAL-TECHNICAL-ADULT SCHOOLS, 1970, 1980

Year	CONSTRUCTION EXPENDITURES Total	Average Annual
To correct current deficiencies:	$10,788,800	--
To meet long-range needs:		
1965-1970		
High Projection	49,042,400	$9,808,500
Low Projection	32,434,600	6,486,900
1970-1980		
High Projection	69,869,800	6,987,000
Low Projection	65,795,400	6,579,500
1965-1980		
High Projection	129,701,000	8,646,700
Low Projection	109,018,800	7,267,900

Note: Estimated expenditures are for the 35 schools responding to the 1964 survey which are operated primarily for vocational, technical and adult education purposes. Four small schools did not respond to the survey.

Source: Department of Resource Development

Operating Costs

Expenditures at local schools for operating purposes amounted to $19,837,000 in 1963-64. This included all revenues except those expended for the construction of new floor space. It is estimated that operating expenditures could increase to $30,500,000 to $36,000,000 in 1970 and $52,100,000 to $59,000,000 in 1980 if all the potential enrollments were to be accommodated. See Table on following page.

ESTIMATED OPERATING COSTS, SCHOOLS OF VOCATIONAL-TECHNICAL-ADULT EDUCATION, 1963-64, 1970, 1980

	1963-64	1970		1980	
		Low	High	Low	High
Annual Operating Costs	$19,837,000	$30,496,000	$35,980,000	$52,096,000	$59,017,000
Annual Operating Costs Per Weekly Hour of Instruction	$38.11	$38.11		$38.11	

Note: All figures in 1963 dollars.

The accompanying bar graph shows the sources of funds for schools of vocational, technical and adult education from the fiscal years of 1961-62 through 1965-66 and the estimated amounts through 1968-69.

The graph indicates a decreasing percentage of total expenditures being supplied from local sources while increasing annual percentages are being supplied from state and federal sources.

About one-half of the "other receipts" comes from tuition.

In summary, it can be said that both operating and construction costs will continue to rise in the years ahead as the vocational, technical and adult schools in the state respond to mounting demands for services. It must also be remembered that the operating and construction costs presented here are in terms of 1963 dollars. Continued normal inflation will increase real costs above the projected levels. Further detailed information on floor space is available at the State Board.

FUTURE PLANS

The plans of the future for the Wisconsin System of Vocational, Technical and Adult Education stem from two important phenomena:

1. Increasing population
2. The rapidity of technological change

The increasing population will cause increasing enrollments; consequently more instructors, supervisory and administrative staff and facilities will be needed.

The rapidly changing technological society results in changing skills and knowledges required in the labor force; consequently, new and improved vocational, technical and adult programs will be needed.

To meet the above challenges, improvements in organization, and administration are also needed.

A plan for the location and function of vocational, technical and adult schools was adopted by the State Board of Vocational, Technical and Adult Education in November of 1963. Please see attachment. However, this plan was never legally adopted, but it has been used as a guide in evaluating area schools in preparation for offering associate degree programs.

I. Plans for Vocational and Technical Districts:

The passage of Chapter 292, Laws of 1965, requires development of an orderly plan through which all of the area of the state will become a part of a district capable of providing comprehensive vocational, technical and adult education opportunities. The law requires that the districting will be accomplished before July 1, 1970. Districting plans must be approved by both the State Board and the Coordinating Committee for Higher Education.

Section 1 of the Law states the purpose as: "In order to broaden the educational opportunities for the youths and adults of Wisconsin, the state board of technical and adult education shall establish a program of instruction at institutions throughout this state which will equip all of this state's people to find their place in the competitive labor market of today. This act shall be construed as an enactment of state-wide concern for the purpose of establishing a state-wide system of vocational, technical and adult education districts throughout the state."

The legislature directed the State Board of Vocational, Technical and Adult Education and the Coordinating Committee for Higher Education to create a proposed master plan.

No standards have definitely been adopted. However, the State Board and the Coordinating Committee have tentatively developed the following criteria for districts organized in 1970:

A. Each district should generate 760-780 full-time students throughout the 1970's and 1980's.

B. Each district should generate 3000 high school graduates annually throughout the 1970's and 1980's.

C. Each district should contain a minimum population of 187,500 throughout the 1970's and 1980's.

D. Each district should contain a minimum equalized valuation of $450 million throughout the 1970's and 1980's.

E. Districts for areas with sparse population shall be considered on individual merits.

Each district will have at least one vocational-technical institute capable of conducting all types of programs, including two-year, full-time associate degree programs, one and two-year non degree programs, part-time occupationally oriented programs and related instruction for apprentices. Secondly, each district will have vocational and technical schools offering part-time instruction in day and evening classes. Some of these schools may also offer the traditional one or two-year programs for youth preparing for skilled occupations. Thirdly, districts may wish to provide vocational schools operating classes in the evening only. These schools will offer courses keyed to local needs for skill upgrading, or increase the social or civic competency as well as improving the home and family life of the student. The district's network of vocational, technical and adult education facilities will continue to provide special extended services such as Manpower training, etc.

Chapter 292 stipulates that the district will be governed by a seven-member board composed of two employers, two employees, and two public members. These six persons will choose a seventh member of the board, a district school administrator.

Appointers are county board chairmen if the district is composed entirely of counties or a combination of counties, high school districts and municipalities; chairmen of high school districts if the district is composed entirely of municipalities.

II. Plans for Meeting Staff Needs:

In recent years, with the rapid expansion of post high school programs, the teacher shortage has looked almost unsolvable in the spring; but with strong recruitment efforts, teachers have been found although their qualifications in many cases are minimal. It becomes increasingly difficult each year to find fully qualified teachers. This is especially true as new and different programs develop and as existing programs expand.

Included in the plans for acquiring sufficient qualified staff are determining areas of shortages, seeking new sources for potential teachers, and cooperating with teacher education institutions in developing teacher education programs.

Presently a study is being developed to document teachers needed by subject areas. Results of this study will be used as a basis for developing teacher training programs in Wisconsin teacher education institutions.

Thought is being given toward preparing graduates of associate degree programs to enter the teaching profession.

Constant and continuing efforts in working with the state universities to expand teacher training opportunities must take high priority in this period of great teacher demand.

Salaries of several teacher educators at Stout State University and the University of Wisconsin are reimbursed up to fifty (50) per cent from the State Board of Vocational, Technical and Adult Education.

Arrangements have been made with several State Universities, including those at Eau Claire, Platteville, Stevens Point, Stout, Superior and Whitewater which now offer approved courses in Principles, Philosophy and Methodology of Vocational and Technical Education acceptable toward certification of our teachers.

Similar courses are also offered at the University of Wisconsin-Madison, and University of Wisconsin Extension at various centers throughout the State.

In addition to pre-service and in-service teacher education programs conducted at institutions of higher education, many professional improvement activities are conducted by the State Board and local vocational, technical and adult schools. Approximately ten 2-day subject area workshops and ten special workshops are conducted annually by the State Board to upgrade teachers and other personnel. Most local schools also conduct training sessions either on a local or regional basis. A Professional Growth Week has been conducted annually for the last two years to upgrade coordinators and supervisory personnel. Three-day conferences for local directors are held three times annually to relate recent pertinent developments in the field. Other conferences and seminars are also conducted. Local and state staff are authorized to attend national conferences and seminars pertinent to their fields. All of the above activities will be continued and expanded.

For the coming year, there is considerable difficulty in office and distributive education fields in finding teachers with work experience backgrounds. The increasing specialization required for programs in advanced accounting, data processing, petroleum marketing, florist, real estate, food merchandising, and fashion merchandising are special areas of concern at this time. Some twenty distributive education and forty office education openings at the post high school level were vacant during the summer of 1966. Many of these have been filled by provisionally certifying teachers recruited from among qualified people in business. Some of these positions were not filled. Two new teacher training programs have been approved for development, one at Whitewater University and one at Stout University.

In the trade and industrial field, great emphasis is being placed on urging instructors to attend the various summer workshops in specialized technical areas. Expansion of this type of opportunity seems necessary if teacher qualifications are to keep abreast of technological change.

Most critical needs at the moment seem to be in areas such as: metallurgy, instrumentation, practical nursing, medical assistants, dental assistant, and civil engineering aides.

In home economics, many teachers have had wage earning experience, and meet certification requirements and are being urged to gain additional occupational experience as well as attend specialized workshops and institutes. These teachers will be used in developing occupational classes where feasible, using local community resource people to supplement their efforts. Local part-time home economics teachers are available to fill in program spots vacated by shifting regular teachers into occupational training programs.

Agriculture related programs are still in their infancy in the state post high school program. Many agricultural programs are becoming allied with other subject areas, such as business, distributive and trade and industrial education. Additional teachers are needed to relieve some overloads. As replacement needs in the high school program continue to absorb most of the available and newly trained teachers, the teacher shortage may become an inhibiting factor in the high school program. At the same time, developments now in the planning stages for a number of post high school programs, may be slowed if qualified teaching staffs cannot be located. However, it is anticipated that these positions may well attract some of the best teachers currently in high school programs, solving the post high school needs, but compounding the problems at lower levels.

The teacher shortages in the vocational, technical and adult system are compounded by the fact that teachers are required in over 100 speciality fields. At present no teacher institutions are preparing teachers for many of these fields.

Recent State Legislation has increased financial support for reimbursement of instructional costs of full-time programs. This should facilitate adjustment of salary schedules to attract more qualified staff.

III. Plans for Expansion of Facilities:

Generally, vocational and technical education facilities have been adequate in Wisconsin. There has been a constant upgrading of facilities, and in the new atmosphere of support, entirely new facilities are becoming a reality. According to projections indicated in the previous section the average annual expenditure needed for construction 1965-1980 is about 7-8 million dollars.

During the fiscal year ending June 30, 1965 a total of $1,840,000 was spent on construction where federal money was involved. Of this $876,000 were federal funds.

During fiscal year ending June 30, 1966, a total of $3,690,000 was spent of which $1,744,000 were federal funds.

During fiscal year ending June 30, 1967, a total of $3,012,000 is under contract of which $1,400,000 are federal funds.

Current policies, which may be expected to continue until the area district plans are implemented, grant up to 50% aid to schools with 50% or more non-resident students; and up to 40% aid to schools with fewer than 50% non-resident students.

Major projects for which federal funds have been spent or are being considered include the following:

Eau Claire: A major school, with an extensive post high school program in addition to the traditional vocational and adult programs, and a school which serves a very large area in the northwestern part of the state is at the second stage of a $3,450,000 expenditure for a complete new facility. In the current year, the school is receiving $1,728,000 in federal aid. The new plant, one building of which has been in use for two years, will provide some 285,000 square feet of space.

Kenosha: Another leading school, which draws students from all parts of the state despite its location in the very southeast corner, is now in the final phase of a complete new facility. The new school will cost a total of $3,700,000. A total of $1,492,000 in federal aid funds was allocated to this project. The entire facility will be occupied during February of 1967.

Milwaukee: During fiscal year ending June 30, 1065, $81,975 in federal aid was allocated for remodeling data processing, T and I and health laboratories. In fiscal year ending June 30, 1966, $20,250 was allocated for a dental laboratory. During fiscal year ending June 30, 1967, $234,570 in federal funds will be allocated for remodeling of classrooms and offices.

At Madison, a major heating plant revision of the current school is being designed, and the whole question of needed future facilities at this major school is undergoing study.

At Wausau, a complete new facility is under study. This school serves a large area of the central north, offering a wide range of vocational and technical programs, and is considering a facility in $3,900,000 range.

At La Crosse, additional land is being acquired for expansion of this already large school, which is moving steadily into technical education in addition to its sizeable and high quality vocational programs.

Wisconsin Rapids, in the central part of the state, is discussing new facilities. Final planning here will depend in part on districting plans, and the nature of programs to be offered.

Beaver Dam, a small school with inadequate facilities has a building in the planning stage which will be cooperative with the high school as well as operating some post high school and part time education.

At West Bend a study is being made to determine building needs.

The Southwestern part of the State is without adequate vocational facilities.

Waukesha will be considering new facilities if Waukesha County is designated a vocational district.

The Fox Cities area around Appleton is studying possibility of constructing new facilities as soon as a vocational district is defined.

At Green Bay a study is in the developmental stage to determine whether to expand in the present location or to move to a new location within the city limits.

At Fond du Lac 50 acres of adjacent land has been promised for expansion in the next few years.

At Oshkosh 48 acres has been purchased for expansion.

There are possibilities of a new facility between Beloit and Janesville areas.

Present facilities at Ashland and Antigo are inadequate.

In South Milwaukee County a study is being made to determine feasibility of developing into a complex for this area.

Racine contracted with School Survey Service which recommended purchase of 50 acres of land to build vocational, technical and adult education facilities.

Plans for replacement or purchase of new equipment rank relatively high on the priority list in present Federal aid policies. In the present climate favoring vocational-technical education, new equipment purchases while still difficult, certainly receive more favorable consideration than was the case a few years ago. Here again, the close liaison with business and industry through the advisory committee plays a major role. Even if school administrators wished to minimize purchases of new equipment (which is certainly not the case), they would be unable to do so in opposition to the desires of industry and business to see to it that training is provided on suitable equipment. Local school expenditures in this area are currently running at the rate of $2,500,000 to $3,000,000 annually. Equipment costs for new programs are, of course, anticipated and provided for in the planning stage, so that these programs start properly equipped. The State Board allocated $600,000 of federal funds for equipment purchases in the current year, and current assumptions are that this approximate level of aid will continue, assuming federal funds are available in approximately the same total amount as in the past year. The high schools as well, have purchased new equipment, tooling up for next year.

IV. Plans for Future Program Development:

Additions of curriculum and research supervisors on the state level will facilitate program development in the future.

Excerpts from the "Officers Report to the Fourth Biennial Convention", Wisconsin State AFL-CIO, 1966 indicate recommendations that two-year post secondary programs in the schools of vocational, technical and adult education should be expanded, and that vocational-technical districts should be developed as quickly as possible.

New program development is keyed closely to local needs, and in the technical fields, to state-wide and even nation-wide needs and opportunities. The advisory committees, mentioned elsewhere in this report, and the liaison

committees with the employment service, provide accurate, continuing analysis of need. Additionally, close contact is maintained in all fields for which the system provides training, with the trade and professional associations, and state-wide labor and management organizations. These day-by-day contacts make it possible not only to anticipate new program needs, but also to constantly upgrade or revise curriculums as necessary.

In the office and distributive education fields during the coming years we will see planning and implementation of more occupational-mix-curriculums which involve several vocational education areas. Examples of these curriculums are in banking, insurance, florist, petroleum marketing, and real estate. The florist curriculum which enrolled its first students this fall provides a good example of the occupational-mix curriculum. With a first year common core, students in the second year move into one of two possible tracks. One of these will be a concentration in plant propagation, soils, turf growing, and landscape work. The other second year track will concentrate on business management and sales. Additional schools are introducing established curriculums in fashion merchandising, court and conference reporting, medical secretarial, office mid-management, food merchandising and credit management. Credit management will be expanded. In business administration as programs grow, specializations develop. New curriculums being developed include banking, insurance, traffic and transportation, food merchandising, institutional accounting (hospitals, etc.) and government accounting.

In trade and industry, twelve new technical programs were approved for the associate degree in the past year. Twenty-five schools have been designated to offer full-time programs in instrumentation, civil technology, architectural aides, industrial architectural model making, automotive aides, computronics, quantity food service, chemical technology, dental laboratory assistants, dental assistants, metallurgy, diesel, power mechanics, and numerical control for the metal working industries. Many more one year vocational preparatory programs have been approved by the State Board on the recommendation of local and state advisory groups. New fields being explored, include: rural and urban planning, solar energy, hygiene radiology, sanatorium work, optics, two-year registered nursing, electromedical, two year programs in printing technology, chemical and photo-instrumentation, automated drafting, nucleonics, and others.

The Vocational Education Act of 1963 authorizes utilization of funds in home economics for training in gainful occupations utilizing home economics knowledge and skills. The traditional skills of the home economics field are expanding into service areas outside of the home; presently in institutional foods, child development, management, clothing and textiles, interior decoration, and some health service occupations. Exploration continues to move into areas of job oriented post high school work. A survey is under way to identify needs which can be best served through the home economics area. One area being studied is the training of assistants for professional home economists employed by business and industry. Training programs are of an extension-type as well as one and two-year post high school offerings.

In agriculture, training is expanding to areas other than production. A new post high school program started this fall in horticulture. Advisory committees are meeting to consider several other programs, including farm credit, agricultural mechanics, dairy plant technicians, conservation and forestry, agricultural business management and marketing, dairy and food

processing, fertilizers, and other training involving processing and distribution. High school programs in agriculture provide students for post high school programs who have developed an interest and an understanding of occupational opportunities in the various fields of agriculture.

Continued efforts will be made to develop a master plan for state-wide vocational, technical and adult education. Many factors will be considered in preparing this plan. They are as follows:

1. The present and potential occupational needs in the labor market area to be served, including trends in the growth or decline of specific occupational fields, the types of expanding industries, the in-migration or out-migration of industry in the state.

2. Demographic data including population densities, transportation, population movements interstate and intrastate, and ethnic changes.

3. School population trends with respect to numbers, retention rates, continuance into higher education institutions, with projections for a target date.

4. Present organizational patterns for technician education (comprehensive high schools, area vocational-technical schools, technical institutes, community colleges); administrative control of these institutions by local boards, state education departments, or other patterns; relative importance of each type within the state; areas of overlapping or of conflict.

5. Present programs of technician education (numbers and types of institutions, curriculum offerings, enrollments, placement of graduates of pre-employment programs, extent of evening and other part-time offerings); trends with respect to growth of the institutions.

6. Present and potential state legislation affecting technician education.

7. Cost data on construction and operation, from within present institutions from other sources.

8. Methods of financial capital outlay and operation, present and projected, with respect to share of total carried by the local community, by state and federal funds, and by student tuition.

9. Recruitment of teachers and other staff members (available supply, qualifications of present personnel, present and proposed teacher education programs).

10. Present and proposed curriculum development services.

Research must be done in the areas of:

1. Program Planning - in terms of occupational surveys, rise and fall of occupations, change in job descriptions, worker mobility, etc. We need to know the quantitative and qualitative supply of trained

workers and the demand for them now and in the future.

2. Program Operations - in terms of operating effectiveness, student costs, teacher qualifications, transferability of skills from classroom to job, student achievement, teaching methodology, instructional equipment, facilities, student and teacher selection, classroom organization, etc.

3. Evaluation - in terms of follow up of graduates to determine placement and success.

This report has presented brief descriptions of long range plans which are in accordance with the philosophy and objectives of the Wisconsin State Board of Vocational, Technical and Adult Education. The plans are contingent upon happenings in the labor force, enrollment potentials, and availability of staff, facilities and funds. Further information is available at the state office as well as at local schools of vocational, technical and adult education.

FUTURE HOMEMAKERS OF AMERICA; OHIO HOME ECONOMICS ASSOCIATION; OHIO

Since affiliating with the national organization of the Future Homemakers of America (FHA), Ohio membership has grown from 189 chapters and 6,867 members to 403 chapters and 18,336 members in 20 years. Some special honors which the state has enjoyed are the three Ohio girls who have served as national officers in FHA and the two national Honorary members from Ohio--Hazel Price and Ival Spafford. Each year is described through its State Program of work, major events of the year, and the national and state theme. Pictures are included with names of state officer, special awards, projects carried out throughout the years. State mothers and names of honorary members are listed as well as annual FHA scholarship recipients. The first state camp in Ohio for FHA members was held in August, 1949, with leadership training given to 140 girls. Publications which are available through the Ohio FHA are listed. The purposes of the state meeting, held annually in Columbus, to promote the program of work, to transact business, and to provide inspiration and fellowship among chapters are described. The degree program is explained and a breakdown of the number of State Homemaker degrees is given. A summary chart is included for the twenty years. (MS)

Purposes of the Future Homemakers of America

The over-all goal of the organization is to help individuals improve personal, family, and community living, now and in the future.

To emphasize specific parts of this over-all goal, Future Homemakers of America have eight purposes. They are:

1. To promote a growing appreciation of the joys and satisfaction of homemaking.
2. To emphasize the importance of worthy home membership.
3. To encourage democracy in home and community life.
4. To work for good home and family life for all.
5. To promote international good will.
6. To foster the development of creative leadership in home and community life.
7. To provide wholesome individual and group recreation.
8. To further interest in home economics.

Future Homemakers of America is the national organization of students studying homemaking in junior and senior high schools. It is a non-profit youth organization co-sponsored by the Home Economics Education Branch of the U.S. Office of Education and the American Home Economics Association.

Homemaking teachers serve as chapter advisers of this organization, which extends and enriches homemaking education.

The Ohio Association of Future Homemakers of America is sponsored by the State Department of Education, Division of Vocational Education, Home Economics Section.

Dedication

This history is dedicated with deep appreciation to the three state advisers who have served the Ohio Association of Future Homemakers of America.

DR. HAZEL PRICE
1945-48

MISS ENID W. LUNN
1948-58

MISS MARGARET MCENIRY
1958-

Dr. Hazel H. Price, home economics educator, served as Ohio's representative on the national committee which laid the groundwork for the national formation of the Future Homemakers of America. She served as chairman of the first National Degree Committee and was made a national honorary member for her services on this committee. She worked tirelessly in developing the degree program and other aspects of FHA in Ohio.

Miss Enid Lunn, State Supervisor of Vocational Home Economics in Ohio from 1917 to 1958, gave her full interest and support to the program of the Future Homemakers of America. Everyone working with her appreciated her sincere interest in teachers and students, her sense of humor, and her wisdom in working with the organization.

Miss Margaret McEniry became State Supervisor of Vocational Home Economics in Ohio and State Adviser of the Ohio Association of Future Homemakers of America in July 1958. Miss McEniry came to Ohio with a fine background for this position, having served in a similar capacity in South Dakota for ten years. She also served on the National Advisory Board of the Future Homemakers of America.

Recognition and appreciation is also expressed to the following assistants who have been in charge of directing the activities and total program of the Ohio Association of Future Homemakers of America.

Mrs. Marian Woodward Lamb
Mrs. Elizabeth Irwin Seabright
Mrs. Catherine Cochran Vaughn
Mrs. Elaine Marten
Miss Margaret Liggett, Assistant State Adviser, 1956-59
Miss Wanda Montgomery, Assistant State Adviser, 1959-61
Mrs. Genevieve Schroeder, Assistant State Adviser, 1961-62
Miss Dorothy Foster, Assistant State Adviser, 1962-

FOREWORD

Dorothy Foster

The history of an organization has great value. It records noteworthy facts about past accomplishments and points the way to future achievements. A knowledge of what has already happened gives guidance and inspiration for what is yet to happen. The past is, indeed, an important teacher for the future. Therefore, the compilation of the history of the Ohio Association of Future Homemakers of America was undertaken to preserve past records and to inspire our continued efforts.

The twenty years of the Future Homemakers of America give us a rich heritage of growth and progress. Ours is a young organization which has matured quickly into one of beauty and strength. We have built a firm foundation by focusing on our program of work and by working diligently toward the fulfillment of our eight national purposes. We have enjoyed great satisfactions in seeing our members develop leadership abilities and lovely qualities of womanhood. We have had many rewards in being a part of a national organization which strives toward improving persons, homes, schools, communities, the state and nation, and the world.

It is impossible to give individual recognition to all of the people who have worked so hard for the growth and progress of the organization. State officers and advisory boards; state staff members and teacher educators; state degree and award of merit committees; local advisers, members, and chapter parents; and other interested persons have made incalcuable contributions through their support and encouragement. Honor is due to every person who has believed in the worth of the organization and who has worked with dedication and perseverance. The strength of the organization today is a tribute to their efforts.

Painstaking efforts have been taken to assure accuracy in this publication. It is regretted that in a few cases desired information was unavailable. If by chance any error has been made, apologies are extended.

The material for the years from the beginning to July 1959 was compiled and written by Dr. Hazel Price and Miss Margaret Liggett. Miss Dorothy Foster did the remaining writing and also did the final compilation and editing of the publication.

This history is presented in the hope that it will be read with pride and that it will renew our efforts to work together "Toward New Horizons".

Dorothy Foster
Assistant State Adviser
Ohio Association Future Homemakers of America

Twenty Years of Progress

A BRIEF SUMMARY OF THE HISTORY OF THE OHIO ASSOCIATION OF FUTURE HOMEMAKERS OF AMERICA

Date of National Founding—June 11, 1945
Date of Ohio's Charter—January 14, 1946

Exactly a score of years ago,
In the year 1945
Ohioans got together and
The OAFHA became alive.

The Ohio Association of F.H.A.
Was formed with loving care.
There is no measure of the work
Represented by the pin you wear.

For twenty years now our advisors and girls
Have strived to make our state the best.
It's up to us to look back on those years,
And thank them for their interest.

So in this year of '65,
We've compiled a history of our past.
With our ambition and skill, we hope,
The next twenty years will be as good as the last.

—Jane Williams
1964-65 State Historian

As early as 1921 high school home economics clubs were being formed in Ohio. During the 1920's the number of these clubs grew, with many of them affiliating with the American Home Economics Association and taking the name of Betty Lampers from the AHEA symbol.

In the meantime schools in several areas of the state where Vocational Home Economics programs were offered were organizing high school clubs under the name of Future Homemakers. A state organization of these clubs was started in 1935, and the constitution of the Future Homemakers Association of Ohio was officially adopted in May 1937, when the first state meeting was held in Columbus.

Both the home economics clubs sponsored by the OHEA and the Future Homemakers organizations sponsored by the state supervisory staff continued to grow until in 1944 there were 181 chapters of the FHA, 92 of these being affiliated with the OHEA and AHEA.

Other states had comparable organizations to those in Ohio, but there was no unified program among states. In 1943 the American Home Economics Association appointed a committee to study high

school homemaking club programs. This committee believed that all existing programs could be strengthened by uniting efforts.

In March 1944 home economics leaders from 29 states, including Ohio, met in Chicago and started plans for developing the national organization. In June 1944 the American Home Economics Association and the Home Economics Education Branch of the U.S. Office of Education became co-sponsors of the organization. The National Education Association through its department of home economics and the American Vocational Association through its home economics section became cooperating groups.

In the fall of 1944 the first national adviser was employed for the national organization, with headquarters in Washington D.C. States were grouped into four regions and each region into three subregions, Ohio being in Central C of the national organization.

In the spring of 1945 twelve national subregional meetings were held, followed by a meeting in Chicago in June. At that time national officer candidates from the subregions and an advisory group met. A provisional constitution was set up and the name Future Homemakers of America was adopted, with June 11, 1945 being celebrated as the date of founding.

Ohio's official charter was granted January 14, 1946.

The history of the Ohio Association of Future Homemakers of America is one of growth and progress. During the twenty years of its existence the number of chapters in the Ohio Association has more than doubled and the total membership has almost tripled. The Award of Merit program, which recognizes outstanding work done by chapters, and the State Degree program, which recognizes outstanding work done by individuals, had roots before the official founding of the organization, and have steadily grown in size and strength.

The Ohio Association has always followed a program of work based on a firm foundation of educational worth. Through the years chapters have done much outstanding work on many projects. The national organization has provided leadership in planning a program of work of excellence. As the years have progressed, the programs of work have become stronger, being based on current needs of youth and always focusing on the over-all goal of homemaking education—to improve personal, family, and community living. During the more recent years the national officers have planned for a program of work to extend over several years.

Ohio has been represented by delegates at every national meeting. The first one was held in Kansas City, Missouri, in July 1948, at which time the national constitution was ratified. The National Regional Meeting of Central Region was held in Columbus, Ohio, in July 1949. Columbus was also the host city for the national meeting held in July 1953.

Ohio has had three national officers and two national honorary members. Three Ohio girls earned the American Homemaker degree before it was discontinued in 1951 by the national organization.

State meetings have been held in Columbus every year beginning with the first one in 1946. State leadership training camp and subregional meetings in Ohio have made important contributions to the growth and progress of the organization. Throughout the years publications have been prepared and distributed to all Ohio chapters. Ohio Future Homemakers have also been active in State Fair participation.

State officers have participated in a variety of activities involving other youth organizations. During various years we have had delegates at the State Traffic Safety Conference, the National Convention of the American Institute of Cooperation, and the National Youth Power Congress. In 1962, 1963, 1964, and 1965 the state FHA officers had a cooperative dinner with the state officers of Future Farmers of America, the Vocational Industrial Club, and the Distributive Education Club of America. The purpose of these dinners has been to acquaint the state officers with the purposes and programs of other youth organizations which are sponsored by the Vocational Education Division of the State Department of Education.

The number of persons who have worked tirelessly in Ohio to further the twenty years of growth and progress, though they could never be counted, nevertheless run into many thousands. State officers and advisory boards; state staff members and teacher educators; state degree and award of merit committees; local advisers, members, and chapter parents; and other interested persons have made incalcuable contributions.

The Ohio Association of Future Homemakers of America looks forward to a bright future of continued growth and progress. May the next twenty years bring even greater achievements.

WHAT HAPPENED PRIOR TO THE OFFICIAL FOUNDING?

The Ohio Association of the Future Homemakers of America received its official charter from the national organization on January 14, 1946. During the 1944-45 school year one hundred eighty-nine clubs with an enrollment of 6,867 members paid state and national dues. These clubs had been former members of the two state high school home economics club organizations.

The earliest home economics club in the state, according to reports, was formed in the Greenville High School in 1921. Other clubs were no doubt functioning soon after this time. The Bedford High School Club, along with four or five other clubs in the United States, applied to the American Home Economics Association for membership in 1924; and since there was no other place for them, they were accepted as members of the adult group. The number of clubs, both high school and college, continued to grow. Many of these clubs took the name of Betty Lampers from the national symbol of AHEA. Boys first became a part of these clubs in 1927. Miss Daisy Stackhouse of Bedford took three male members of her club to the national AHEA convention held in New York City in 1934.

Schools in several areas of the state where programs of Vocational Home Economics were offered had in the meantime organized high school clubs under the name of Future Homemakers. Such a group was organized at The Plains by Beryl Cone in the early 1930's and at Hillsboro by Eva Fels in 1932-33. A state organization of these clubs was started in 1935, but the constitution of the Future Homemakers Association of Ohio was not officially adopted until May of 1937, when the first state meeting was held in Columbus. By the time the constitution was adopted, degree work had been started and three local degrees were being given. Plans were made in 1937 for the awarding of a state degree, nine chapters submitting the name of one candidate they considered eligible. State dues were set at 5c per member. Beryl Cone, teacher at The Plains, served as the first state adviser with Marion Woodward (Lamb), from the state supervisory staff, acting as Chairman of the Executive Board. The slate of officers elected, included: Verneita Stein, Monroeville, President; Betty Chester, Centralia, Vice President; Lillian Reed, Coolville, Secretary; Della Jane Dickerson, Coshocton, Treasurer; and Ruth Wood, Sebring, Reporter. Committees were appointed at this meeting to decide on banner and pin designs.

Helen Henderson of Bowling Green State University, serving the Ohio Home Economics Association as chairman of the Student Club Committee, reported 70 clubs enrolled in the state in 1935. She suggested then that the college and high school clubs be separated. Mrs. Ethel Patterson of North Ridgeville was given the responsibility of the high school clubs, serving as the first state adviser of high school home economics clubs. Daisy Stackhouse served as state adviser in 1938-39. Clubs belonging to the Future Homemakers organization were encouraged to join the Home Economics Club Section of the Ohio Home Economics Association.

Both the home economics clubs sponsored by the OHEA and the Future Homemakers organizations sponsored by the state supervisory staff continued to grow until in 1944 there were 181 chapters of the FHA, 92 of these being affiliated with the OHEA and the AHEA.

Since many other states had comparable organizations to those in Ohio, the American Home Economics Association appointed a committee in 1943 to study the high school home economics club problem. This committee felt that both programs could be strengthened by uniting the efforts of all who were working with home economics clubs on the high school level. Invitations to attend a national meeting to consider the development of this type of organization were sent by the American Home Economics Association to all states. Home economics education workers from 29 states met in Chicago in March 1944 and initiated plans for developing a combined national organization. Mrs. Hazel H. Price of the state supervisory staff, at that time the adviser of the Ohio Future Homemakers Association, served as state representative at this meeting.

As a result of this meeting, the AHEA and the Home Economics Service of the U. S. Office of Education became sponsors of the new organization, with the department of Home Economics of the National Education Association and the Home Economics Section of the American Vocational Association cooperating and supporting it at national level. To get the organization underway, Dr. Hazel Frost, assistant supervisor of home economics education and state adviser of the Future Homemakers Association of Oklahoma, was chosen October 1, 1944 as national adviser.

In anticipation of this merger, during the 1943-44 school year joint meetings of the two high school home economics club organizations were held in Ohio; the first being a fall FHA meeting to which Home Economics Clubs were invited. Two joint newsletters were issued and joint regional meetings were held in seven sections of the state during the year. Pauline Fierce, adviser of the state Home Economics Clubs and Mrs. Price, adviser of the state FHA, worked together to perfect the merger of these organizations. Home Economics Clubs chose the President, Marian Och of Bridgeport and the

Treasurer of the new state organization while the FHA groups chose the President Elect, Carolyn Ray of Elizabeth Township, and the Secretary, Arlene Ullery, of St. Paris.

On the national level states were grouped into regions. Sub-regional meetings of pupil delegates were held during the spring of 1945. Four official delegates: President, Marian Och; President Elect, Carolyn Ray; Secretary, Arlene Ullery; and Secretary Elect, Jocele Thut of West Liberty, attended the Central C regional meeting of the new organization held at Ball State Teachers' College at Muncie, Indiana May 4 and 5, 1945. Two adults accompanied the delegates, Miss Helen Mettler and Mrs. Hazel Price. The delegates made recommendations as to the name of the new national organization and made suggestions as to first, the purposes of the organization; second, what the program of work might be; and third, how many and what kind of degrees might be given.

Student delegates and advisers from the various regions met in Chicago in June when the new national organization, officially named the Future Homemakers of America, was officially founded on June 11, 1945.

One hundred eighty-nine Ohio chapters, with a total of 6,867 members, joined the state and national organization during 1944-45. No state meeting was held in the spring of 1945 since there was a national curb on all conferences with over fifty people in attendance. Regional meetings were held throughout the state with each school sending two delegates and its adviser. Mrs. Hazel H. Price was appointed as state adviser, representing the state supervisory staff, and Helen Mettler became chairman of the advisory board of the Ohio Association of the Future Homemakers of America. Miss Mettler prepared that summer a new Ohio Manual for the use of the chapters. Mrs. L. G. Ray of Troy was made the first state mother.

FUTURE HOMEMAKERS OF AMERICA

STATE ASSOCIATION NO. 15

This is to certify that the Ohio Association of Future Homemakers of America, Inc., having satisfied all the requirements for affiliation with the National Organization of

FUTURE HOMEMAKERS OF AMERICA, INC.

is hereby chartered as a State Association of the National Organization, and is entitled to all the rights and privileges pertaining thereto.

In witness whereof this Charter is signed and sealed this 14th day of January 1946

NATIONAL PRESIDENT

Hazel Frost
NATIONAL ADVISER

CHAIRMAN NATIONAL ADVISORY BOARD

1945-1946

NATIONAL AND STATE PROGRAM OF WORK:

NATIONAL THEME: Service to Ourselves and Others

PROGRAM:

I Improving ourselves by developing physical, social, and moral qualities

II Helping to secure unity among family members

III (Our associates - school) Sharing with others for the good of all

IV (Our neighbors - community) Helping with community problems

V (Our countrymen) Learning to be better citizens

MAJOR EVENTS OF THE YEAR:

Regional state FHA meetings were held in the fall of 1945 at Toledo, Castalia, Alliance, Celina, Elizabeth Twp. (Troy), West Liberty, Coshocton, Barnesville, Mt. Gilead, Lancaster, Pataskala, Waverly, Ashland and Arcadia.

The Ohio Association of FHA applied for and received its charter of national membership in January, 1946. Two hundred seventy-eight chapters paid state and national dues for the year, a gain of 90 chapters over the previous year. The total membership was 10,348.

The first annual meeting of the Ohio Association of FHA was held on April 13, 1946 on the Ohio State University campus. Individual state awards were given to seniors who had accumulated 600 points based on club work. The Award of Merit was granted to 63 chapters for their outstanding achievements of the year. Contributors to the World Wide Christmas Festival, the first national project, were recognized.

The Central C national regional meeting was held on the Ohio Wesleyan campus at Delaware on April 26 and 27, 1946. Ohio was represented by four student delegates: Carolyn Ray, State President; Jean Wilkins, Publicity Chairman; Ruth Henline, President Elect, and Margaret Ann Robertson, Vice President Elect from the Eastern Region.

During the summer of 1946, a panel of Ohio and Michigan FHA members presented, at the American Home Economics Association meeting in Cleveland, the advantages of the national organization. At this meeting, Vida Nesbitt of Cleveland gave $25 to the Ohio Association. This money was used to start the Scholarship Fund of the organization.

National Advisers

Hazel Frost (Oklahoma), June 1945—July 10, 1948

Pauline Stout (West Virginia), July 11, 1948—Aug. 31, 1949

Mary Lee Hurt (Michigan), Sept. 1, 1949—July 15, 1950

Lela Smartt (Tennessee) (deceased), June 15, 1950—July 31, 1952

Marguerite Scruggs (Oklahoma), July 14, 1952—Aug. 31, 1956

Mrs. Lois Oliver Sigler (Virginia), Aug. 15, 1956—Dec. 31, 1962

Mildred Reel, (Illinois), Dec. 31, 1962—

Assistant National Advisers

Frances Champion (Florida), June, 1945—Aug. 20, 1948

Jerline Kennedy (Texas), June 1, 1950—Oct. 19, 1951

Catherine Dicks Myers (New Mexico), Jan. 5, 1953—Jan. 4, 1954

Mildred Huber (California), Feb. 1, 1954—Jan. 31, 1955

Mrs. Lois Oliver Sigler (Virginia), Sept. 1, 1954—Aug. 14, 1956

Mildred Reel (Illinois), May 1, 1956—Dec. 31, 1962

Betty Ruth Joyce (Arkansas), Dec. 31, 1962—

1946-1947

NATIONAL AND STATE PROGRAM OF WORK:

(Same as 1945-46. See page 11.)

MAJOR EVENTS OF THE YEAR:

At the July meeting of the Executive Committee it was decided to start both an FHA Camp Fund and a Scholarship Fund as state projects. Contributions to these two funds were added as Award of Merit requirements.

During this year 279 chapters with a total of 10,854 members paid dues to the state and national organization, a gain of 536 members.

Ohio had four student delegates at the National Central C Regional meeting held in Murray, Kentucky on April 8 and 9, 1947. The delegates were Mary Lou Miller, Stewart; Joy Linn, Holmes-Liberty; Lois West, Waverly; and Beverly Higgins, Shadyside. The girls were accompanied by three advisers: Wanda Montgomery of Liberty Twp. (Findlay); Valerie Dragliec, Alliance; and Elizabeth Irvine, State Department.

Fifty-two chapters received Award of Merit Certificates at the state meeting, held on the Ohio State University campus April 25 and 26, 1947. The general topic for this meeting was "Homes and Home Economics in Other Lands." The speakers at the meeting were Paddy Ridley, exchange teacher from England; Marlissa Fritschi from Zurich, Switzerland; and Mrs. Susy Kosby from Thurwalla, India. Two seniors, Mary Lou Miller of Stewart and Margaret Harsh from Radnor were granted scholarships of $100 each from the Vida Nesbitt FHA Scholarship Fund.

The first state homemakers degrees were given in the spring of 1947. The four girls who received the degree were Mary Lou Miller, Athens County; Joy Linn, Crawford County; Jean Wilkins, Highland County; and June Price, Hancock County. Four teachers, one from each section of the state, Niva Giauque of Coshocton, Mrs. Orpha Palmer of Greenville, Eva Fels of Hillsboro, and Valerie Dragliec of Alliance served on the State Degrees Committee and worked out the first state manual on this subject.

Mrs. Hazel H. Price served as chairman of the first National Degrees Committee. Mary Kohler of Hilliard was a member of this committee. Mrs. Price was made a national honorary member for her services on this committee.

1947-1948

NATIONAL AND STATE PROGRAM OF WORK:

NATIONAL THEME: Building Today for Tomorrow

PROGRAM:

I Developing our organization
II Improving ourselves
III Training for leadership
IV Promoting international good will
V Cooperating for school betterment
VI Improving home and family life
VII Serving community, state, and nation
VIII Preparing for careers
IX Promoting recreational activities

MAJOR EVENTS OF THE YEAR:

A special FHA state meeting was held on September 20, 1947 to confer State Homemaker Degrees on the following girls: Ruth Hammond, Margaret Fisher and Arlene Elder from Alexandria; Donna Mellisor from Pleasant Twp.; Martha Davis from Van Wert and Glenna Reed from St. Paris. The student members of the state degree team were Dorothy Locher, Alliance; Pat Hufnagle, Greenville; Ann Miller, Coshocton; and Bernice Igo of Hillsboro.

The annual state meeting was held on the Ohio State University campus, May 7 and 8, 1948. The theme was "Careers in Home Economics". A symposium of college seniors presented the possibilities of the various areas for careers in Home Economics. Fifty-four chapters completed the requirements for the Award of Merit. Honorary membership was awarded to Miss Enid W. Lunn, State Supervisor of Home Economics. Two hundred eighty three chapters with a total membership of 11,173 paid dues to the state and national organizations.

A special coach was provided for the 33 delegates and local advisers attending the first national convention in Kansas City in July 1948. The high spot of the meeting was the awarding of the National Homemaker Degree; the first ever given went to one of the Ohio delegation, Joy Linn (Taylor) of Holmes-Liberty High School.

Lois West (Williams) of Waverly won the distinction of being the first Ohio FHA member to be elected to a national office, that of Central Regional Vice President.

Mrs. Hazel Price, State Adviser and Mrs. Pearson Linn, State Mother accompanied the delegates and advisers to this national meeting.

The State Advisory Board suggested that district camps or meetings be held during the summer of 1948, with the persons eligible to attend being county officers. These meetings were to provide leadership training for the students in attendance.

The State Camp Fund had grown to $196.75 in the two year period, and the Scholarship Fund to $212. At the March meeting of the Executive Council it was proposed that the $200 available in the Scholarship Fund be given to the one best applicant for the scholarship instead of two persons sharing the money as was done previously.

1948-1949

NATIONAL AND STATE PROGRAM OF WORK:

NATIONAL THEME: Building Today for Tomorrow
PROGRAM:

I Developing a Growing Appreciation for Homemaking
II Emphasizing Worthy Home Membership
III Encouraging Democracy in Home and Community Life
IV Working for Good Home and Family Life for All
V Promoting International Good Will
VI Working for Creative Leadership in Home and Community Life
VII Providing Wholesome Individual and Group Recreation
VIII Furthering Interest in Home Economics

MAJOR EVENTS OF THE YEAR:

In the fall of 1948, Miss Enid W. Lunn, State Supervisor of Home Economics, became the State FHA Adviser. Miss Catherine Cochran served as her assistant.

The state theme for the 1948-49 Program of Work was *Happier Homes for Better Living.* The annual state meeting was held on the Ohio State University campus, April 22 and 23, 1949. A panel discussion on the theme for the year was the special interest feature. Fifty-two received Award of Merit certificates at this meeting. Honorary state memberships were awarded to Mrs. Orpha Palmer, Greenville; Niva Giauque, Coshocton; Valerie Dragliec, Alliance; and Eva Fels, Hillsboro.

Total membership for the year was 10,778 members in 278 chapters.

The Central Regional National Meeting was held in Columbus on July 12, 13, and 14, 1949. The registration totaled 1290 from the 13 states included in the region. Lois West (Williams), Central Regional Vice President from Waverly, presided at the business session.

During the program following the formal banquet, the American Homemaker Degree was conferred on two candidates: Lois West (Williams), Waverly, Ohio, and Dolores Marie Rauch from Alma, Michigan.

Mrs. Rajanimal Devadas, graduate student at the Ohio State University, gave an interesting talk on home life in India.

The first State Camp for FHA members was held August 14-20, 1949, at Camp Muskingum, located near Carrollton, Ohio. One hundred forty girls enjoyed the leadership training afforded them in addition to nature study hikes and craft classes.

The First State FHA Campers—August 1949

1949-1950

NATIONAL AND STATE PROGRAM OF WORK:

Purpose I: To promote a growing appreciation of the joys and satisfactions of homemaking

Goal: Learning to enjoy the everyday tasks of homemaking

Purpose II: To emphasize the importance of worthy home membership

Goal: Learning to understand and enjoy our families

Purpose III: To encourage democracy in the home and community life

Goal: Understanding what democracy means and practicing democracy in our chapters and in our homes

Purpose IV: To work for good home and family life for all

Goal: Helping families in our communities or neighborhoods to do things together for fun and service

Purpose V: To promote international good will

Goal: Interpreting our way of living to people in other countries and in turn learning more about them

Purpose VI. To foster the development of creative leadership in home and community life

Goal: Encouraging members to take part in activities for betterment of home, school, and community

Purpose VII: To provide wholesome individual and group recreation

Goal: Encouraging every member to take part in some recreation

Purpose VIII: To further interest in home economics

Goal: Emphasizing the importance of homemaking as a career

MAJOR EVENTS OF THE YEAR:

The theme chosen for the year's work was "A Better World through Happier Homes". The new national project for the year was "The Families Together" project.

Two hundred eighty three chapters paid state and national dues for 1949-50. There were 130 girls as candidates for the State Homemaker Degree, having met the requirements of the two previous degrees, Junior and Chapter Homemaker.

Mrs. Rose Nagy of Trotwood was named State Club Mother. Mrs. Pearson Linn was awarded a silver tray for her three years service in this capacity.

Sixty-four chapters participated in the World Christmas Festival. Two hundred nine individual gifts were sent. Twenty-six chapters adopted foreign homemaking classes; 33 packages were sent to these schools. Twenty chapters participated in "The Families Together" project while 102 chapters observed National FHA Week.

"By train, by plane and by car" the Ohio delegation of 59 members and 17 advisers set out for Kansas City, Missouri for the second National FHA Convention in July 1950. The group stayed at the Hotel Robert E. Lee, directly across the street from the Auditorium.

Virginia Heimberger, President from Clyde; Mary Howard, Public Relations Chairman from Marysville; and Phyllis McInturf, Historian from Stewart served as Ohio's three voting delegates. Lorraine Blankenship of Hanover Twp. and Jeannette Henderson of Carthage-Troy sang in the all-national chorus.

Delegates to the 1950 National Meeting—Kansas City, Missouri

1950-1951

NATIONAL AND STATE PROGRAM OF WORK:

Purpose I: To promote a growing appreciation of the joys and satisfactions of homemaking
Goal: Accepting and enjoying our responsibilities in our homes

Purpose II: To emphasize the importance of worthy home membership
Goal: Practicing harmonious living with our families

Purpose III: To encourage democracy in home and community life
Goal: Learning new ways of practicing democracy in our homes and communities

Purpose IV: To work for good home and family life for all
Goal: Creating better understanding among family members and families of the community

Purpose V: To promote international good will
Goal: Overcoming prejudices by increasing knowledge of people in other countries

Purpose VI: To foster the development of creative leadership in home and community life
Goal: Learning to be a leader by doing every job to the best of one's ability

Purpose VII: To provide wholesome individual and group recreation
Goal: Planning recreation for personal and group needs

Purpose VIII: To further interest in home economics
Goal: Exploring careers in home economics

MAJOR EVENTS OF THE YEAR:

A revision of the Constitution of the Ohio Association of the Future Homemakers of America was prepared by the State Executive Council and sent to the chapters for their approval prior to its being voted in at the state meeting. A major change in the selection of the state president was made in this revision.

New certificates of membership were issued by the national organization to last for ten years. Date stickers are to be added to the certificate as each year's dues are paid.

The annual state meeting was held in Columbus on April 13-14, 1951. On Friday evening, the conferring of State Homemaker Degrees took place in the Deshler-Wallick Hotel. The Saturday all-day session was held in Central High School. The principal speaker was Dr. William Warner. His topic was "How FHA Chapters Can Aid in Civilian Defense".

The number of chapters participating in national projects were: World Christmas Festival 64, with about 259 individual gifts sent; adoption of Foreign Homemaking Classes, 26, packages sent, 33; Families Together Project, 20; Observance of National FHA Week, 102.

Rural Life Sunday was officially observed by Ohio FHA chapters on April 29, 1951.

Two National Leadership Training Conferences were held in the summer of 1951. Ohio delegates attended the Eastern Conferences held on the campus of Michigan State College, East Lansing, Michigan, July 2-6, 1951. Jeannette Henderson of Coolville was awarded the American Homemaker Degree, the third Ohio FHA member to have this honor. Catherine Cochran accompanied the delegates to the national meeting.

State FHA Camp was held at Camp Muskingum August 12-19, 1951 with 170 members and advisers in attendance. Fifteen of the nineteen girls who attended the National Leadership Training Conference gave a skit on the circular response method and the 6-6 method of discussion which were used at the national conference.

THE FAMILY TREE

There's one thing in God's nature world
That means a lot to me:
It symbolizes much of life—
It is a lovely tree!
With roots so deep in God's rich earth
It's not disturbed by weather—
Like families with faith in God
Who lives in peace together.
Its trunk, the body strong and firm,
Like parents anywhere—
To guide, control, direct, sustain
The offspring which they bear.
The branches, which like children spread
In every known direction,
Until the fruitage of their growth
Has reached its full perfection.
And so a tree appears to me
The gem of God's creation
As it portrays our families
Which constitute a nation.

1951-1952

NATIONAL AND STATE PROGRAM OF WORK:

Purpose I: To promote a growing appreciation of the joys and satisfactions of homemaking
Goal: Accepting and enjoying responsibilities in our homes

Purpose II: To emphasize the importance of worthy home membership
Goal: Getting along with the family

Purpose III: To encourage democracy in home and community life
Goal: Learning new ways of practicing democracy

Purpose IV: To work for good home and family life for all
Goal: Stressing the importance of spiritual values in the home

Purpose V: To promote international good will
Goal: Overcoming prejudices by increasing knowledge of people of other countries

Purpose VI: To foster the development of creative leadership in home and community life
Goal: Learning to be a leader

Purpose VII: To provide wholesome individual and group recreation
Goal: Planning recreation to meet the needs of all

Purpose VIII: To further interest in home economics
Goal: Encouraging homemaking students to join FHA

MAJOR EVENTS OF THE YEAR:

FHA members attending the Leadership Training Conference during the summer added a fifth National Project: Observance of United Nations Day, October 24. The conference was held at Green Lakes, Wisconsin.

Barbara Dickerson, Jefferson High School, Dresden, as State Projects Chairman, attended the National Leadership Training Conference at East Lansing, Michigan July 2-6, 1952. She also attended State FHA Camp and served as an FHA Junior State Fair Board member.

Forty-nine chapters sent a total of 1138 gifts as their share in the World Christmas Festival. Thirty chapters observed United Nations Day (the newest national project); 39 chapters participated as Pen Pals. The Annual Meeting was held on April 25-26, 1952.

The fourth annual FHA Camp was held August 10-16, 1952, at the FFA Camp Muskingum.

Four state sub-regional meetings were held at the call of the state officers. Each officer met with local presidents and officers in her district to discuss business transacted in the June Executive Council meeting, and to help to coordinate local programs with the state and national ones.

"Chapter Activities to Help in Program Planning" was a bulletin prepared from the Annual FHA reports from Ohio chapters of 1951-52.

1952-1953

NATIONAL AND STATE PROGRAM OF WORK:

Purpose I: To promote a growing appreciation of the joys and satisfactions of homemaking
Goal: Sharing and enjoying responsibilities in our homes

Purpose II: To emphasize the importance of worthy home membership
Goal: Getting along with the family

Purpose III: To encourage democracy in home and community life
Goal: Learning new ways of practicing democracy

Purpose IV: To work for good home and family life for all
Goal: Growing in appreciation of each family member as an individual

Purpose V: To promote international good will
Goal: Overcoming prejudices in our community, state, nation, and world

Purpose VI: To foster the development of creative leadership in home and community life
Goal: Assuming leadership in the home and community

Purpose VII: To provide wholesome individual and group recreation
Goal: Helping individuals and families learn how to play

Purpose VIII: To further interest in home economics
Goal: Interpreting what a good homemaking program can do for home, school, and community

MAJOR EVENTS OF THE YEAR:

A meeting of the applicants for the State Homemaker Degree was held in Hearing Room 2 of the State Office Building on October 18, 1952.

Ohio chapters for the year numbered 286 with a total membership of 12,377 girls. Approximately 1300 girls received the Junior Homemaker Degree, 600 earned the Chapter Homemaker Degree, and 206 members were honored with the State Homemaker Degree.

The annual state meeting was held in Central High School, Columbus, May 1-2, 1953. Miss Beulah Sellers, Chairman of the State Degrees Committee, conferred State Homemaker Degrees. The four ranking Vice Presidents presented a program comparing aspects of Ohio homemaking today and 150 years ago, in recognition of Ohio's Sesquicentennial celebration. Mrs. Howard Irwin of Hanover Twp. (Hamilton) served as State Mother.

An amendment to the Constitution was proposed by the Executive Council and was voted on at the Annual Meeting. This amendment stated that all candidates seeking the office of state president must hold the Junior and Chapter degrees, must hold or be working on the State Homemaker degree; and that candidates for other state officers must hold the Junior degree and be working on the Chapter or State Degrees.

Award of Merit Certificates were presented to 97 chapters. Annual state dues were increased to 15c per member. Approximately $40 was paid on a one hundred dollar pledge to the Ohio Christian Rural Fellowship.

The third national meeting of FHA was held in Columbus July 2-6, 1953. Ohio had a total of 80 persons attending the convention; 62 members, 15 adults and three voting delegates. Two thousand girls from 45 states and several outlying possessions attended meetings held in Memorial Hall.

Zoelouise Bauman, Ohio FHA President, welcomed the delegates. The high point of the convention was the pageant given on Saturday evening. Ohio, as did all states, shared in revealing our United States history. Joyce Falor, Wauseon, was elected National Parliamentarian.

A new national project was adopted for the year—UNESCO.

Zoelouise Bauman, State FHA President, attended the banquet of the Ohio Vocational Association and spoke briefly. She also was a guest at the annual banquet of the Future Farmers of America when their Twenty-fifth Anniversary was celebrated.

The annual FHA State Camp was held August 16-22, 1953. Attendance was limited to the number of accommodations available. Two hundred members participated in lively discussions and group activities. Leadership training was a main concern of the group. Many experiences were provided, such as conducting discussion groups, conservation study, devotional services, flag ceremonies, and evening programs.

Left, Page 16 *Sesquicentennial Celebration at the 1953 State Meeting*
Right, Page 16 *State Homemakers—Central High School—1953 State Meeting*

1953-1954

NATIONAL AND STATE PROGRAM OF WORK:

Goal I: Developing greater understanding among the homes of the world. To give emphasis to better understanding of cultures and homes of other countries and of the different cultural groups within the community.

Goal II: Training and improving ourselves to be more democratic in all phases of life. To give emphasis to leadership ability by using democratic principles at home, at school, in chapters, in our community and nation.

MAJOR EVENTS OF THE YEAR:

Both state and national dues were increased bringing the total to 30c per member.

Five national projects were supported: The World Christmas Festival; UNESCO; Families Together; National FHA Week; Civil Defense and Safety.

Twenty-seven representatives were sent to the Leadership Training Conference held at East Lansing, Michigan in July 1954. They were accompanied by eight chapter advisers and a representative from the State Department. Judy Williston, Delta, served as a discussion leader. Virginia Fleming of Germantown served as a member of the national finance committee.

1954-1955

NATIONAL AND STATE PROGRAM OF WORK:

Goal I: Developing greater understanding among the homes of the world. (To create better understanding of cultures and homes of other countries and of the different cultural groups within our own communities as well.)

Goal II: Training ourselves to be more democratic in all phases of life. (To emphasize leadership ability by using democratic principles at home, at school, in chapters, in our community and nation.)

Goal III: Teaching ourselves to realize and accept our responsibilities in our homes. (To emphasize need for family planning in use of family income, work, and time, and our part in harmonious family living.)

Goal IV: Understanding what homemaking can contribute to our future lives at home and in business. (To emphasize ways to use what you've learned in homemaking regardless of kind of work you do.)

MAJOR EVENTS OF THE YEAR:

Forty-four new chapters were added, making a total of 338 chapters and 14,667 members in the Ohio Association.

The State Homemaker degree was granted to 145 girls at the evening session of the state convention held on April 29, 30, 1955. The Award of Merit certificate was given to 109 chapters for outstanding work for the year.

The speaker for the evening meeting was Ruth Ann Benefiel of Muncie, Indiana, National Vice President of the Central Region. Mrs. Anne Grimes of Columbus presented a program, "Ohio Folk Songs and Ballads".

The luncheon was held on April 30 at the Ohio Union. Miss Phyllis McInturf, a former state officer, told of some of her experiences as an International Exchange student in Sweden.

Six delegates, a chapter adviser and Miss Margaret Liggett, representing the state office, attended the National Convention held at Iowa State University at Ames, Iowa, in July 1955.

1955-1956

NATIONAL AND STATE PROGRAM OF WORK:

National Projects: Families Together; Home, School, and Community Beautification; Civil Defense; UNESCO Gift Coupon Project, World Christmas Festival

Goals: (Same as 1954-55, see page 19)

RECIPE FOR A HAPPY FAMILY....

½ cup of politeness
2 cups good disposition
3 cups love
1 cup happiness
4 T. of willingness to work together
1 T. thoughtfulness
½ T. encouragement
Big dash of unselfishness

Season this liberally with good humor, and bake in oven of warm contentment for the rest of your life. Serve big helpings with a smile.

MAJOR EVENTS OF THE YEAR:

This year marked the tenth anniversary of the affiliation of the Ohio Association of Future Homemakers with the national organization. The Annual State Meeting was planned in celebration of this tenth anniversary. The state association also initiated participation in the Home Safety Program sponsored by the Nationwide Insurance Co. Elm Valley Chapter, Ashley, Ohio, was the first chapter to gain possession of the safety trophy given in recognition of their work done in this program.

In 1956, Barbara Berger, Talawanda Chapter, was chosen as Ohio's candidate for National President. She, along with a delegation of 66 others, attended the National Convention in Chicago in July 1956.

Below: Delegates to the 1956 National Meeting in Chicago

1956-1957

NATIONAL AND STATE PROGRAM OF WORK:

National Projects: Families Together· Teenage Consumer; UNESCO Gift Coupon Plan; Home School and Community Beautification; and Civil Defense

Goal I: To promote better family living

Goal II: To help members understand the opportunities open to them in the field of home economics

Goal III: To understand our neighbors both at home and abroad

Goal IV: To provide training for each chapter member for participation in home, school, and community activities

MAJOR EVENTS OF THE YEAR:

The Constitution and By-Laws of the Ohio Association were edited and printed for distribution to all chapters over the state. Miss Margaret Liggett was appointed Assistant State Adviser with Miss Enid Lunn as State Adviser.

The state meeting held at the Youth Center on the Ohio State Fairgrounds on April 26 and 27, 1957, had the theme: "What Kind of Light Does FHA Cast on Your Community?"

The Ohio delegation attended the National Meeting at Purdue University. Lafayette, Indiana held July 1-5, 1957.

1957 State Meeting Banquet

1957 State Meeting

Delegates in Youth Center Dormitory

1957-1958

NATIONAL AND STATE PROGRAM OF WORK:

(Same as for 1956-57. See page 21.)

MAJOR EVENTS OF THE YEAR:

The Award of Merit Committee together with the Advisory Board met to review the Award of Merit Requirements. The requirements were revised extensively in order that they might better serve as means of chapter program evaluation. It was decided that the newly prepared requirements would be used for a two-year period. At the end of this time, the requirements would be reviewed by advisers and chapter members attending the Annual State Meeting in 1959. Further recommendations and changes would be considered at that time.

In the spring of 1958 the State Degree Committee met for the purpose of planning reorganization of the committee. The reorganization made it possible for each subregion to have a chapter adviser represented on the committee.

Miss Enid W. Lunn, State Supervisor of Vocational Home Economics and State Adviser for the Ohio Association of the Future Homemakers of America retired from her position in July 1958. Miss Margaret McEniry was appointed as her successor and assumed her new position on July 1, 1958. Miss McEniry became the State Adviser for the Ohio Future Homemakers with Miss Margaret Liggett as her assistant.

The Annual State Meeting this year was planned to include the first all-state FHA Chorus in its program. Seventy chapters were represented in this choral group. The Executive Council recommended that this chorus be formed each year and that it be included in each annual state meeting in the future.

Kansas City was the scene of the national meeting in 1958. Ohio had a delegation of 15 present.

1958-1959

NATIONAL AND STATE PROGRAM OF WORK:

(Same as 1956-57. See page 21.)

MAJOR EVENTS OF THE YEAR:

Within this year the applications for state officer candidacy were changed to include more emphasis on chapter participation and individual development of the candidate. Recommendation check sheets prepared by persons acquainted with the candidate and her capabilities were also required. It was agreed that this plan would be tried for a two year period, at the end of which time the plan would be reviewed once more and necessary changes would be made.

The Annual State Meeting was planned as a special tribute to the State of Ohio and its history. The Executive Council planned and prepared a pageant depicting highlights in the life of the state and its people. The all-state chorus, now including 90 voices, provided important background music for the pageant. In the subregional meetings the Award of Merit Requirements were reviewed and recommendations made to the Award of Merit Committee. The requirements, in revised form, were used for the 1959-60 applications for the Award of Merit.

Blessed is she whose daily tasks are a labor of love, for her willing hands and happy heart translate duty into privilege, and her labor becomes a *service* to God and all mankind.

Blessed is she who opens the door to welcome both stranger and well-loved friend; for gracious *hospitality* is a test of brotherly love.

Blessed is she who mends stockings and toys and broken hearts for her *understanding* is a balm to humanity.

Blessed is she who scours and scrubs; for well she knows that cleanliness is one expression of *Godliness.*

Blessed is she whom children love; for the *love* of a child is more to be valued than fortune or fame.

Blessed is she who sings at her work; for *music* lightens the heaviest load and brightens the dullest chore.

1959-1960

1959-62 NATIONAL AND STATE PROGRAM OF WORK

OBJECTIVE I: To develop our potential abilities

Projects: Youth Can Do
Teenage Consumer

OBJECTIVE II: To develop a better understanding of our family members and to contribute to their well-being

Projects: Family Unity
Family Fitness

OBJECTIVE III: To interpret the value of home economics as a basic part of our total education

Project: Your Future with Home Economics

OBJECTIVE IV: To promote good will through getting to know our neighbors at home and abroad

Project: Getting to Know You

STATE THEME: "Blueprint for Better Living"

NATIONAL MEETING: The 1959 National Meeting was held July 13-17 in Chicago at the Conrad Hilton Hotel and was attended by 73 Ohio delegates. The theme of the meeting was "Blueprint for Action" and its purpose was to introduce the 1959-1962 Program of Work. About 2500 delegates worked together to learn about and share suggestions for using the new program of work.

STATE CAMP: The new 1959-62 National and State Program of Work was introduced at camp in August 1959. In the group work sessions this program of work was studied and additional ideas and interpretations were developed for the Ohio chapters. Following camp each Ohio chapter received a copy of the new National and State Program of Work as well as a copy of the additional suggestions for Ohio's program.

SUBREGIONAL MEETINGS: Twelve subregional meetings were presented in the fall of 1959 to present the new Program of Work, to explain Award of Merit and State Degree requirements, and to further fellowship among chapters.

STATE MEETING: The 15th Annual State Meeting was held at the Youth Center in Columbus on April 22 and 23, 1960. In honor of the fifteenth anniversary a pageant entitled "The Vision of FHA: Toward New Horizons" was presented. This pageant traced the development of the history of the Ohio Association through the fifteen years. Many persons participated, including several who had active roles in the earlier years. On Saturday morning the delegates were inspired by an excellent talk by Rev. Don Gilmore on the subject "Youth Can Do".

OTHER INFORMATION: On Sept. 1, 1959 Miss Margaret Liggett, who had served as Assistant State Adviser since 1956, flew to Nigeria, Africa for a year's assignment in working with the International Cooperation Administration. Miss Wanda Montgomery was named Assistant State Adviser in the fall of 1959.

STATE OFFICERS AND ADVISORY BOARD

OFFICE	*OFFICER*	*ADVISOR*	*CHAPTER*
President	Nancy Powers	Mrs. Viletta Bretthauer	Fayette
Ranking V.P. — South	Karen Irwin	Mrs. Helen Clough	Talawanda
Ranking V.P. — Central	Evelyn Hansen	Mrs. Ethelyn Harger	Thompson-Bellevue
Ranking V.P. — East	No Officer		
Ranking V.P. — West	Audie Lee Laver	Mrs. Marguerite Craig	Fulton
Secretary	Grace Dean	Mrs. Shirley Irwin	Elm Valley
Treasurer	Sherry Reeder	Miss Mildred Young	Marlington
Parliamentarian	Karen Baertsche	Mrs. Ladonna Stewart	Hardin-Northern
Historian	Lydia E. Schaurer	Mrs. Alice Frantom	Franklin-Monroe
V.P. of Program Planning	Gail Harrison	Mrs. Grace Schindler	Wheelersburg
V.P. of Public Relations	Jackie Furlan	Mrs. Helen VanDyke	West Geauga
V.P. of State Projects	Patti Watkins	Mrs. Florence Tackett	Glenford
V.P. of Recreation	Carol Seipel	Mrs. Jean Downey	Shade

1960-1961

NATIONAL AND STATE PROGRAM OF WORK:

(Same as 1959-60. See Page 25)

STATE THEME: "Homes—Our Nation's Lifeline"

NATIONAL MEETING: The 1960 National Meeting was held July 11-15 in Washington, D.C. Sixteen members and six advisers from Ohio went by train to Washington. The theme of the meeting was "HOME—The Hub of Good Citizenship". Six Ohio state officers presented a relaxer at a general session. About 1100 delegates were in attendance.

STATE CAMP: One of the highlights at the 1960 camp, held August 15-20, was the introduction of the "Friends in Lebanon through FHA" state project. Miss Margaret Brugler, Co-Director of CROP in Ohio, and Samir Maamary, a native of Lebanon who graduated from the College of Agriculture at Ohio State University, were present to speak to the camp delegates. Samir later returned to Lebanon as a key person in the Akhar Area "Self-help" project, and was an important link between Ohio FHA'ers and Lebanon. (At the January 1961 Ohio Pastor's Convention, state officers and advisers were presented a special CROP Award.)

SUBREGIONAL MEETINGS: Twelve subregional meetings were presented in the fall of 1960.

STATE MEETING: The 16th Annual State Meeting was held April 21-22, 1961 at the Youth Center in Columbus. At the banquet program on Friday night Mr. William Martin, author of children's books, spoke on "Reading for Living".

OTHER INFORMATION: D'uan Van Meter, State President from Arcadia, attended the National Youth Power Congress in Chicago in March 1961. Both the State Degree and Award of Merit Committees had meetings in the summer of 1960. Voting delegates at the 1961 state meeting voted in a constitution revision and a dues increase, making the total state dues 25 cents per member.

TOTAL CONTRIBUTIONS FOR LEBANON

Ohio FHA chapters were generous in their response to our "Friends in Lebanon Through FHA" project. In addition to learning about the people, the country, and the customs of Lebanon, FHA'ers made contributions to the salary of a Lebanese home economics teacher as follows:

1960-61	$1797.75
1961-62	1744.01
1962-63	1679.90
Total	$5221.66

Award of Merit Group at 1961 State Meeting

1961-1962

NATIONAL AND STATE PROGRAM OF WORK:
(Same as 1959-60. See Page 25)

STATE THEME: "FHA — Learn It, Love It, Launch It"

STATE GOAL: To make FHA more popular.

NATIONAL MEETING: The 28 members and 9 advisers who were delegates to the 1961 National Meeting in St. Louis traveled by train from Cincinnati. The theme of the meeting, which was held July 3-6, was "Youth—Measure Your Values". The most exciting highlight of the week for Ohio girls was the election of Dawn Reinhard to the office of National Historian. Dawn had served as 1960-61 State Ranking Vice President for Central Region in Ohio.

STATE CAMP: State Camp was held August 7-12, 1961. One of the new features of camp this year was having college girls present for the week. The six college girls were all preparing to be homemaking teachers and represented six of the Ohio universities that offer training in vocational home economics. These girls made fine contributions at camp and had very worthwhile experiences in helping them prepare for their chosen profession. They recommended that the practice of having college girls at camp be continued.

SUBREGIONAL MEETINGS: Twelve subregional meetings were presented in the fall of 1961.

STATE MEETING: The 17th Annual State Meeting was held on April 13 and 14, 1962. This was the first year that a banquet was not held. The Friday night session was at Mershon Auditorium on the campus of Ohio State University and the Saturday session was at the Youth Center on the fairgrounds. One of the outstanding features of the Friday night program was the pageant of the flags of our fifty states. This year for the first time we also had both the State Degree and the Award of Merit ceremonies on Friday night. These were very beautiful, with the State Degree girls in pastel formals and the Award of Merit girls in white dresses with red roses at the necklines.

OTHER INFORMATION: Miss Wanda Montgomery resigned as Assistant State Adviser, effective October 1, 1961. Mrs. Genevieve Schroeder was appointed to serve in this capacity on a temporary assignment.

Joan Mericle, state officer from Pandora, attended the National Youth Power Congress in Chicago during March 1962.

The State Degree and Award of Merit Committees met in the summer of 1961.

During the 1961-62 school year Ohio FHA chapters contributed to our various projects as follows:

STATE PROJECTS:	
Friends in Lebanon through FHA	$1744.01
FHA Scholarship	470.30
Leadership Training Fund	250.00
OTHER PROJECTS:	
UNESCO	244.20
Ohio Christian Rural Fellowship	171.00
	$2879.51

1962-1963

1962-1965 NATIONAL AND STATE PROGRAM OF WORK

OBJECTIVE I: Discovering myself and my worth to others
Project: You and Your Values

OBJECTIVE II: Contributing to the joys and satisfactions of family living
Projects: Focus on Family Friendship
Marriage Calls for Preparation

STATE THEME: "Values—A Measure of What We Treasure"

STATE GOAL: To introduce and interpret the new National Program of Work for 1962-65 and motivate members to use it.

NATIONAL MEETING: The 1962 National Meeting was held in Salt Lake City, Utah and was attended by 15 members and 5 advisers from Ohio. The theme of the meeting was "Guideposts for Progress." The four objectives and five projects of the 1962-65 Program of Work were introduced. Ohio was very proud of Dawn Reinhard, National Historian from Ohio, who presided at the banquet and fulfilled many other duties as a national officer. Ohio delegates also presented a devotional at the meeting.

SUBREGIONAL MEETINGS: Twelve subregional meetings were presented in the fall of 1962 to present the new Program of Work, to explain Award of Merit and State Degree requirements, and to further fellowship among chapters.

STATE MEETING: The 18th annual state meeting was held at Mershon Auditorium on the campus of the Ohio State University on March 15 and 16, 1963. This was the first year that the entire state meeting was held at Mershon. The purposes of the Friday night session were to recognize individuals and chapters that had made outstanding contributions to the organization and to promote the Program of Work.

On Saturday morning, in addition to the business of the association, we had an excellent speaker, Mr. Gordon Ward, TV Newscaster from Toledo, Ohio. His topic was "Roadmap for Living." The state meeting was attended by about 3000 persons on Friday night and by more than 2100 persons at the Saturday session. This represented a considerably larger delegation than had ever before been in attendance at a state meeting of the Ohio Association.

OTHER INFORMATION: Mrs. Genevieve Schroeder resigned effective July 1, 1962. Miss Dorothy Foster officially became Assistant State Adviser on September 1, 1962, although Miss Foster performed several necessary duties for the organization throughout July and August.

OBJECTIVE III: Strengthening my education for future roles
Project: Stay in School

OBJECTIVE IV: Launching good citizenship through homemaking
Project: Action for Citizenship

A Program of Work Calendar was printed in September 1963 and distributed to all chapters. State Newsletters were published in December 1962 and February 1963.

There was no state camp held in the summer of 1962.

This was the final year of the "Friends in Lebanon Through FHA" project, so during this year the 1962-63 State Projects Chairman and the Executive Council began to assemble ideas for a new state project. This material was presented to the 1963-64 Executive Council, who made the final decisions regarding the 1963-66 state project.

In the summer of 1962 the State Award of Merit Committee met to make final decisions regarding the revision of the Award of Merit Handbook. The revised Handbook was sent to all chapters in the fall of 1962 as was also the booklet, "Favorite Songs and Relaxers," compiled by the 1961-62 State Recreation Committee.

The State Degree Committee met in June 1962 and Executive Council meetings were held in June and August 1962 and in January and March 1963.

Jeri Zoller attended the State Traffic Safety Conference held in the fall of 1962. Betty Brooks attended the National Youth Power Congress in Chicago in March 1963. Nevora Fridenmaker attended the national convention of the American Institute of Cooperation held at Ohio State University in August 1962.

During the 1962-63 school year FHA chapters contributed to our various projects as follows:

STATE PROJECTS:	
Friends in Lebanon through FHA	$1679.90
FHA Scholarship	559.79
Leadership Development Fund	297.50
OTHER PROJECTS:	
UNESCO	332.75
Ohio Christian Rural Fellowship	224.05
	$3093.99

1963-1964

NATIONAL AND STATE PROGRAM OF WORK: (Same as 1962-63. See Page 29.)

STATE THEME: "Stepping Stones to Happy Homes"

STATE GOAL: To introduce the 1963-66 State Project, "Know, Serve, and Appreciate Ohio," and motivate members and chapters to work on it.

STATE CAMP: State camp was held from June 24-28, 1963 with approximately 250 members and advisers in attendance. The 1962-63 state officers were present to help the 1963-64 state officers get started with their responsibilities. The state theme was chosen and emphasized throughout the week's program. The program was focused upon the national and state objectives and projects. Mr. Calvin Young, State Director of Mental Health, spoke to us regarding the mental health aspect of our "Know, Serve, and Appreciate Ohio" project. The campers were divided into chapters, with each chapter preparing a year's Program of Work Book. (The best material from each book was compiled by the Program of Work Chairman into the state Program of Work Calendar, which was sent to all chapters in August 1963.) A beautiful campfire ceremony climaxed the week.

NATIONAL MEETING: The 1963 National Meeting was held in Municipal Auditorium in Kansas City, Missouri. The Ohio delegation, consisting of 26 members and 6 advisers, traveled by TWA jet air service to the meeting. The theme of the meeting was "Your Home—A Key to the Future." The Ohio girls served as ushers at a general session.

STATE MEETING: The 19th annual State Meeting was held on April 10 and 11, 1964 at Mershon Auditorium on the campus of Ohio State University. We had a very effective backdrop to portray our theme, "Stepping Stones to Happy Homes." The Friday evening program was again a recognition program, recognizing the outstanding achievements and contributions of individuals and chapters. We also had several program features which emphasized our objectives and projects. On Saturday morning we had an outstanding speaker, Dr. Otis A. Maxfield, senior minister at the First Community Church in Columbus. His topic was "Marriage Calls for Preparation."

OTHER INFORMATION: The "Know, Serve, and Appreciate Ohio" project was designed as a broad and flexible project, with unlimited possibilities for individual and chapter experiences. A comprehensive list of suggested activities was compiled by the State Projects Chairman and sent to every chapter. It was planned that every chapter would "serve" through an emphasis on mental health. The first year of this project was very successful.

In May 1963 the State Degree Manual was published in printed form for the first time. This was necessary because of the great demand for these manuals. Two State Newsletters, dated November 1963 and February 1964, were published during the year.

Kathleen Jelley, State President, attended the national convention of the American Institute of Cooperation held at Lincoln, Nebraska in August 1963.

Subregional meetings were not held in the fall of 1963.

The State Advisory Board and Executive Committee met in October and in February to work on plans for the State Meeting. They also met April 9th, 1964.

The twelve State Award of Merit Committee members met in Columbus in March to evaluate chapter applications for the Award of Merit and to take care of other committee business.

The twelve State Degree Committee members conducted interviews throughout the state for those girls applying for the State Homemaker Degree. This committee also met in June 1964 to take care of the business of the committee.

During the 1963-64 school year FHA chapters contributed to our various projects as follows:

STATE PROJECTS:	
Mental Health Research Fund	$1502.65
FHA Scholarship	534.00
Leadership Development Fund	377.45
OTHER PROJECTS:	
UNESCO	331.35
Ohio Christian Rural Fellowship	289.60
	$3035.05

1964-1965

NATIONAL AND STATE PROGRAM OF WORK:
(Same as 1962-63. See Page 29.)

STATE THEME: "Education Builds A Nation"

STATE GOAL: To emphasize throughout the state the importance of education and of mental health.

STATE CAMP: State camp was held from June 21-26, 1964. Approximately 228 members and advisors were in attendance. Both the 1963-64 and 1964-65 state officers were present. The new officers chose the state theme, which was emphasized throughout the activities of the week. State Senator Oliver Ocasek gave an inspirational keynote address on the importance of education. Mr. Calvin Young was present to give help with the second phase of the mental health aspect of our "Know, Serve, and Appreciate Ohio" project. He gave guidelines for the chapters that wish to do volunteer work in mental hospitals.

This year the campers were again grouped into chapters, with each chapter preparing a Program of Work Book for the year. The best material from each book was compiled into the State Program of Work Calendar which was sent to all chapters in August 1964.

A highlight of the banquet program was the style show of fashions from various periods of Ohio history. Later that night a beautiful campfire and impressive candlelighting ceremony were held.

NATIONAL MEETING: The Ohio delegation to the 1964 National Meeting held in Chicago at the Conrad Hilton Hotel consisted of 18 advisers and 60 members. The delegation traveled in two chartered busses, leaving on July 12 and returning on July 17. The theme of this national meeting, which was attended by 2300 delegates, was "Education—An Endless Challenge." Three of Ohio's state officers led relaxers at a general session. These were written by Beth Todd, 1963-64 State Recreation Leader, and were enthusiastically received by the national delegates. Voting delegates voted to increase national dues to 25c per member, thus making the state and national dues in Ohio 50c per member.

STATE MEETING: The 20th Annual State Meeting was held at Mershon Auditorium on April 2 and 3, 1965. The value of education was emphasized in various ways throughout the meeting, the theme of which was "Education Builds a Nation." State Senator Tennyson Guyer was the keynote speaker, using as his topic "The Educated Heart." During the two days the 20th anniversary year was recognized and celebrated in special presentations.

OTHER INFORMATION: Glee Alison, State President, attended the national convention of the American Institute of Cooperation held at Michigan State University in East Lansing in August 1964.

The second printing of the State Degree Manual was necessitated in September 1964 because of the great demand for this publication. Two state newsletters were also printed.

Twelve subregional meetings were held in the fall of 1964.

State Executive Council Meetings were held in June, July, and August 1964 and in January and April 1965.

The twelve State Award of Merit Committee members met in Columbus in March 1965 to evaluate chapter applications for the Award of Merit and to take care of other committee business.

The twelve State Degree Committee members conducted interviews throughout the state for those girls applying for the State Homemaker Degree.

The twenty-year history of the OAFHA was compiled by Miss Dorothy Foster during the year. This history was printed and made available to all chapters in the state.

During the 1964-65 school year FHA chapters contributed to our various projects as follows:

STATE PROJECTS:	
Mental Health Research Fund	$2010.95
FHA Scholarship	649.00
Leadership Development Fund	352.00
OTHER PROJECTS:	
UNESCO	343.00
Ohio Christian Rural Fellowship	274.50
	$3629.45

"The home is the foundation of a nation, and when that home is managed by a well-informed homemaker who cooks well-balanced meals, clothes her family with well-fitted garments, and furnishes her home with harmonious colors and furniture, we have a strong home foundation. If within this home the rights of each are respected and we teach and live love of home, country, fellow men, and God, we have the homemaker's ultimate goal. A nation with these homes will be prosperous, respected by other nations, and a blessing to the world."

PRESIDENTS OF THE OHIO ASSOCIATION FUTURE HOMEMAKERS OF AMERICA

YEAR	NAME	SCHOOL	ADVISER
1945-46	Carolyn Ray Myers	Elizabeth Twp. (Troy)	Miss Pauline Stone

1964-66	Mrs. Vivian Weidenhamer, Paulding

HONORARY MEMBERS OF THE OHIO ASSOCIATION OF FUTURE HOMEMAKERS OF AMERICA

At each state meeting, beginning with the one held in 1948, honorary memberships have been presented to three or four persons who have rendered outstanding service to the Ohio Association of Future Homemakers of America. The following is a summary of the positions and contributions of persons who have received honorary membership in the Ohio Association:

State Superintendent of Public Instruction
State Director of Vocational Education
State Advisers and Assistant State Advisers and Supervisors
State Advisory Board Member
State FHA Mother
Adviser to State President or National Officer
State Degree and Award of Merit Committee Chairman
Contributor to State Leadership Camp
Writer of publication used by State Association
FHA Secretary in the State Office

1948 Enid Lunn
Eva Fels
Helen Mettler
Wanda Montgomery

1949 Niva Giauque
Mrs. Orpha Palmer
Mrs. Pearson Linn
Mrs. Mabel Scott

1950 Mrs. Ruth Peer
Mrs. Helen Clough
Agnes Dinsmore
Lucile Reuthinger

1951 Mrs. Catherine Vaughn
Mrs. Alice Kuester
Mrs. Ruby Engle

1952 Mary Kohler
Mrs. Mildred Lutz
Theodora Stocksdale Hall
Mrs. Jessie Wines

1953 Thelma Birt
Mrs. Lena Pommert
Beulah Sellers
Beryl Cone

1954 Mrs. Howard Irwin
Mrs. Elaine Marten
Rev. Clyde Rogers
Mrs. Kay Baker

1955 Mrs. Hazel Price
Margaret Liggett
Margaret Rothermel
Mary A. Milliken Edie

1956 Mr. Walter Theiss (Deceased)
Mrs. Walter Theiss
Mrs. Joyce Garrod Brehm

1957 Mrs. Alice Frantom
Mrs. Anna Tharp
Marjorie Hanline
Mrs. Mary Jay

1958 Grace Beckwith
Esther McCormick
Mr. Ralph Howard
Mrs. Viletta Bretthauer

1959 Mrs. Joyce Jackson
Mrs. Genevieve Schroeder
Mrs. Mildred Burris
Ida Chadwick

1960 Mrs. Theodore Leininger
Mrs. Mable Little
Mrs. Dorothy Cooperrider
Miss Margaret McEniry

1961 Mrs. Virginia Wykoff
Mrs. Nadine Elder
Mrs. Juanita Ullmann

1962 Hazel Core
Barbara Reed
Dorothy Foster
Gladys Bailey

1963 Mrs. Elizabeth Seabright
Ida Patterson
Mrs. Joyce Matthews
Shirley Boggs

1964 Dr. E. E. Holt
Mrs. Louise Leach
Miss Marlene Wilkins
Mrs. Olive Woodyard

1965 Dr. Harold Bowers
Mrs. Hermalee Dunkel
Mrs. Marjorie McKibben (Deceased)
Dr. Bryl Shoemaker

National Honorary Members from Ohio

Dr. Hazel Price, State Adviser, 1945-1948, Columbus, Ohio (1946-1947)

Dr. Ivol Spafford, Author and Curriculum Consultant, Rock Creek, Ohio (1953-1954)

It is regretted that it was impossible to print the married names of all of those who have married during the interval of years. Throughout this publication married names are used when they are known; otherwise maiden names are used.

OAFHA SCHOLARSHIP FUND

The Scholarship Fund of the Ohio Association of Future Homemakers of America was started with a contribution of $25 made by Vida Nesbitt at the AHEA meeting in Cleveland in June 1946. At their Executive Council meeting in July of that year the state officers decided to make the Scholarship Fund a state project, with the requirement that Award of Merit chapters contribute to the fund.

In the spring of 1947 two seniors were granted scholarships of $100 each. In 1948 it was decided that one scholarship of $200 be presented to the best qualified applicant. This practice was followed until the amount of the scholarship was increased to $400 in June 1960.

Chapters have been generous in their contributions to the Scholarship Fund, making it possible in 1964 for two scholarships of $400 each to be presented.

The purpose of this fund is to award a scholarship to an outstanding Ohio FHA member who plans to major in home economics in a university or college in Ohio. Selection of the applicant is based upon attainment of the State Homemaker Degree, a high academic record, leadership ability, and financial need.

CONSTITUTION AND DUES

The first constitution of the Ohio Future Homemakers of America was adopted in May 1937. This was revised when the Ohio Association became an official part of the national organization. Subsequent revisions were made in 1951 and 1953. In 1957 the Constitution and By-laws of the Ohio Association were edited and printed for distribution to all chapters in the state. A new revision was printed in 1961.

The Constitution is a very basic and important part of the organization. Each revision has been made to meet better the needs of the organization. Every chapter should have a copy of the state constitution and be very familiar with its contents. Each chapter should also be certain that the local FHA constitution is up-to-date.

Through the years dues have been increased to meet the demands of rising costs. At the 1961 state meeting it was voted to increase state dues to 25c per member. At the 1964 national meeting it was voted to increase national dues to 25c per member. Thus the total state and national dues became 50c per member starting with the 1964-65 school year.

SCHOLARSHIPS AWARDED BY OAFHA

	RECIPIENT	UNIVERSITY ATTENDED
1950 —	Mary Belle Kinney Waverly Chapter	Ohio State U.
1951 —	Marjorie Smith Canal Winchester Chapter	Ohio State U.
1952 —	Nancy J. Hartman Cory-Rawson Chapter	Bowling Green
1953 —	Charlotte Finley Malta-McConnelsville Chapter	Ohio State U.
1954 —	Jo Ann Benner Greenfield Chapter	Ohio State U.
1955 —	Janet L. Mercer Union Local Chapter	Ohio State U.
1955 —	Judith C. Williston Delta Chapter	Ohio State U.
1956 —	Judith A. Pfeifer	Ohio State U.
1957 —	Doris Patterson Waverly Chapter	Ohio State U.
1958 —	Mary Margaret Simmons Barnesville Chapter	Ohio State U.
1959 —	Joy Miller Franklin-Monroe Chapter	Ohio State U.
1960 —	Suzanne Grieves Anna Chapter	Ohio State U.
1961 —	Grace Dean Elm Valley Chapter	Ohio State U.
1962 —	Karen Stanley Albany Chapter	Ohio University
1963 —	Judy Akey Ridgeway Chapter	Ohio State U.
1964 —	Kathleen Jelley Hardin-Houston Chapter	Ohio State U.
1964 —	Cathy Sherck Bellevue Thompson Chapter	Ohio State U.
1965 —	Karen Keene Hilliard Chapter	Ohio State U.
1965 —	Glee Alison Baltimore Chapter	Ohio State U.
1965 —	Marlene Steyer Arcadia Chapter	Bowling Green State U.

OUR PROGRAM OF WORK

OUR PROGRAM OF WORK

The National and State Program of Work is printed at the beginning of the section for each of the years of this history.

The Program of Work of the Future Homemakers of America has been planned on a sound educational basis throughout the years. Since the beginning, the national organization has provided a firm foundation for state associations and local chapters with the suggested National Program of Work. As the years have progressed, the Programs of Work have become stronger, being based on current needs of youth and always focusing on the over-all goal of homemaking education—to improve personal, family, and community living.

National Projects have included:

- World Christmas Festival
- Adoption of Foreign Homemaking Classes
- Families Together
- Observance of National FHA Week*
- Observance of United Nations Day, Oct. 24
- UNESCO
- Civil Defense and Safety
- Home, School, and Community Beautification

In the 1959-62 and 1962-65 Programs of Work objectives have been stated with the following projects:

Youth Can Do	You and Your Values
Teenage Consumer	Focus on Family Friendship
Family Unity	Marriage Calls for Preparation
Family Fitness	Stay in School
Your Future with Home Economics	Action for Citizenship
Getting to Know You	

*Note: This is a continuing project. National FHA Week is celebrated each year during the first week in April.

In 1948-49 FHA Week was first included in the national projects; the celebration took place during the first week in November of each year. In 1952, at a meeting of the Executive Council, the members decided that FHA Week had become a tradition and recommended that it be celebrated as such and not considered as a national project.

In 1956, at a meeting of the Executive Council, it was decided that FHA Week be celebrated the first full week of April unless it conflicts with Easter or Holy Week. If this occurs, the week is changed to the last week in March.

Mr. Dan Firestone of Firestone Photographs in Columbus was helpful in supplying the photographs from past years. Pictures were not, however, available for every year of the organization's existence.

State Projects:

The State Projects, *Scholarship Fund* (see page 39) and *Leadership Training Fund* (formerly Camp Fund) have been in existence throughout the organization's history. In July 1946 the Executive Council established the FHA Camp Fund as a state project, with the requirement that Award of Merit chapters contribute to the fund. The purpose of this fund was to provide money for the leadership training camp program. In 1961 this fund became known as the Leadership Training Fund, with the funds being made available wherever extra money was needed for leadership training, including state and national meetings as well as camp.

Our *1960-63 State Project* was *"Friends in Lebanon through FHA."* We helped to sponsor a self-help project in the Akkar Area of Lebanon by paying the salary of a Lebanese home economics teacher for three years. During the three year period a total of $5,221.66 was contributed by Ohio chapters for this purpose. In addition, we reached the other goals of this project which were to learn to understand the people of Lebanon better by studying the country and its people; to help as many FHA chapters as possible to have a personal contact with the Lebanese people; and to help the people of Lebanon to know and understand Ohio's Future Homemakers.

Our *1963-66 State Project* was *"Know, Serve, and Appreciate Ohio."* We served through our emphasis on mental health. During the 1963-64 school year chapters learned facts about mental health and mental illness. During the 1964-65 school year some chapters did voluntary work in mental hospitals and during the 1965-66 school year chapters learned about career possibilities in the mental health field. Throughout the three years of the project chapters contributed to the "OAFHA Fund for Mental Health Research," with $3513.60 being contributed in the first two years of the project. Chapters also carried out many other activities and projects to know and appreciate Ohio.

We have also contributed to the Ohio Christian Rural Fellowship Fund through the years. The money in this fund is used to help in reaching out into rural areas on an inter-faith basis. It is a way to help more Ohio people in their total approach to life.

Another project we have continued to support throughout the years is UNESCO. Ohio chapters have contributed substantial sums of money that have been sent to other countries to help meet various needs. Working on this project helps us to achieve our purpose of promoting international good will.

1961-62	51	10,466	521,126
1962-63	51	10,715	540,872
1963-64	51	10,869	554,603

Note: The District of Columbia, since 1954-55, and Guam, Rhode Island, and American Army Post Schools abroad during certain years, have had individual chapter affiliations although they are not chartered associations. Therefore, they are counted in the number of chapters and members, but not in the number of associations.

SUBREGIONAL MEETINGS

Twelve FHA subregions are designated throughout the state, with a state officer being elected from each subregion. The state president may come from any subregion.

Fall subregional meetings have been held throughout the state during many of the years of the existence of the Ohio Association of Future Homemakers of America. The state officer from the subregion plans and presides over the subregional meeting. Active participation from every chapter in the subregion is encouraged.

The purposes of subregional meetings are to strengthen local chapters, give officer training, emphasize the Program of Work, review requirements for the Award of Merit and State Degree, and promote fellowship and friendship among chapters.

The State is organized into West, Central, South, and East subregions according to this map.

LEADERSHIP CAMP

The first Leadership Training Camp was held in 1949, with FHA camps being held in each of the following years except 1962 and 1965. Each of these camps has been held at the State FFA Camp, Camp Muskingum, located on Leesville Lake in Carroll County in the eastern part of the state. About 140 FHA'ers, advisers, and state advisers attended the first camp. This number grew through the years so that in the more recent years 250 persons have been in attendance.

The goals of the camp have been to provide training for officers and members of chapters and to further the FHA Program of Work. General sessions, group discussions, and special interest classes have focused on using the Program of Work for planning chapter programs, on stressing good parliamentary procedure, and on reviewing Award of Merit and State Degree requirements.

The camp program provides arts and crafts, nature study, and recreation, in addition to work. The camp chorus, talent night show, and campfire ceremony have also added interesting highlights to the camp week. A camp newspaper, the Muskingum Echoes, was published at the camps held from 1954-61.

The state executive council together with the advisory board and state adviser, plans the camp program. Each succeeding year the camp program has been developed with careful consideration to the evaluation given by the campers. Increased effort has been made to provide more and more opportunities for individual participation as well as group responsibility. The camp is an important part of the state program and has contributed much strength to local chapters.

1964 State Campers

STATE MEETINGS

The first state meeting of the Ohio Association of Future Homemakers of America was held on April 13-14, 1946, and subsequent annual meetings have been held every year. The state meetings have always been held in Columbus, but the growth of the organization has made it necessary to change meeting locations within the city several times.

The earliest meetings were held on the campus of the Ohio State University. In 1951 the Friday night meeting was at the Deshler-Wallick Hotel and the Saturday meeting was at Central High School. In 1955 the meeting was held in West High School, with a Saturday luncheon being held at the Ohio Union. Starting in 1956 the meetings were held at the Youth Center on the Ohio State Fairgrounds.

In 1962 and the years following a banquet was not held. That year the Friday night meeting was at Mershon Auditorium on the Ohio State campus and the Saturday meeting was held at the Youth Center. The entire state meeting was held at Mershon in 1963, 1964, and 1965. The meetings at Mershon have been attended by more than 3000 persons on Friday night and by more than 2600 on Saturday morning.

Dr. E. E. Holt, State Superintendent of Public Instruction, has given greetings to the delegates at each of the state meetings held in Mershon Auditorium.

The first state chorus, composed of 70 members, sang at the 1958 state meeting. A state chorus has been a part of all subsequent meetings. This group has steadily grown in size, with 200 members (representing 200 chapters) singing at the 1965 state meeting. The girls are sent the music to be memorized about a month prior to the meeting. After a two hour rehearsal the girls are ready to sing beautifully for the audience.

Directors of the state chorus have included Mrs. J. S. West, 1958-59; Mrs. Eugene Good, 1960; Mrs. Helen Swank, 1961; and Mr. Raymond Lilly, 1962-65.

The state meetings have been held to promote the Program of Work, transact the business of the organization, and provide inspiration and fellowship among chapters. Each year special program features have been presented to carry out the state theme for the year. The awarding of state degrees and the Award of Merit has been a highlight every year, with the installation of new officers climaxing each meeting.

A list of special program features from some of the state meetings follows:

1947 — Speakers from England, Switzerland, India

1948 — Symposium of college seniors speaking on careers in home economics

1949 — Panel discussion on "Happier Homes for Better Living"

1952 — Civil Defense speaker

1953 — Pageant: 150 Years Ago and Now (Ohio's sesquicentenial year)

1955 — Program on Ohio's Folk Songs and Ballads

1956 — Ten Year Celebration

1959 — Pageant—Tribute to Ohio's History

1960 — Pageant—15 Years of FHA

1961 — Talk by Mr. William Martin, author of children's books

1962 — Pageant of Flags of our 50 states

1963 — Talk by Mr. Gordon Ward, TV Newscaster, on "Roadmap for Living"

1964 — Talk by Dr. Otis Maxfield, Columbus minister, on "Marriage Calls for Preparation"

1965 — Talk by State Senator Tennyson Guyer, on "The Educated Heart"

DATES AND THEMES OF THE OAFHA STATE MEETINGS

DATES	THEMES
1. April 13-14, 1946	No theme indicated
2. April 25-26, 1947	"Homes and Home Economics in Other Lands"
3. May 7-8, 1948	"Careers in Home Economics"

17. April 6-7, 1962	"FHA—Learn It, Love It, Launch It"
18. March 15-16, 1963	"Values—A Measure of What We Treasure"
19. April 10-11, 1964	"Stepping Stones to Happy Homes"
20. April 2-3, 1965	"Education Builds A Nation"

NATIONAL MEETINGS

Throughout the years National FHA Meetings have been an important source of guidance and inspiration for state associations. Meeting FHAers from all over the United States is an enriching experience. Exchanging ideas and gaining Program of Work information are very valuable in strengthening local chapters and state associations.

The National FHA Regions are Central, Southern, North Atlantic, and Pacific, with each of these being subdivided into three areas. Ohio is Central C Region. Before the first national meeting was held in Kansas City, Missouri in 1948, regional meetings were held.

The Central C National Regional Meeting was held on the Ohio Wesleyan campus at Delaware on April 26 and 27, 1946, with four Ohio delegates in attendance. Four student delegates and three adults attended the National Central C Regional Meeting held in Murray, Kentucky on April 8 and 9, 1947.

Some of the national meetings have been large conventions with two or three thousand delegates in attendance. Others have been regional meetings or national meetings with a more limited number of delegates.

The Central Regional Meeting was held in Columbus, Ohio, July 12-14, 1949. The National Meeting was held in Columbus July 2-7, 1953.

Three national officers from Ohio have been elected during the first twenty years of the organization's history.

In accordance with the policy of each state having an assignment for the national meeting, each year the Ohio delegates have had special duties and responsibilities. A few examples of these follow. In 1960 the Ohio girls presented a relaxer, in 1961 they served as hostesses at the banquet, in 1962 they presented a "Thought for the Day", in 1963 they served as ushers for a general session, and in 1964 they again presented relaxers.

The All-States Chorus is a very popular feature at the national meeting. Each state provides two or three members for this chorus. In 1950, 1953, 1956 and then each year from 1959 through 1964 an All-States Chorus has been a part of our national meetings. Through the years Ohio girls have enjoyed being a part of the All-States Chorus.

Each year Ohio, along with every member state, has been represented by a national committeewoman to work closely with one of the national officers on a committee or special project. This work is begun at the national meeting.

During the various years Ohio delegates have traveled by car, bus, train, or plane to the national meetings.

NATIONAL OFFICERS FROM OHIO

Lois West Williams, Waverly Chapter—Vice President, Central Region—1948-49

Joyce Falor Tavtigian, Wauseon Chapter—Parliamentarian—1953-54

Dawn Reinhard Heikkila, Holmes-Liberty, Bucyrus Chapter—Historian—1962-63

Lois

Joyce

Dawn

Many of us love a garden, yet most gardens are seasonal. Here is a garden each of us can plant and reap our harvest at all times, in all seasons.

Plant five words of P's—presence, promptness, preparation, preseverance, and purity.

Plant three rows of squash—squash gossip, squash criticism, and squash indifference.

Then sow five rows of lettuce—
let us be faithful to duty,
let us be unselfish and loyal,
let us be true to our obligations,
let us obey rules and regulations,
let us love one another.

No garden is complete without turnips—
turn up for all meetings,
turn up with a smile,
turn up with new ideas,
turn up with a determination to make everything count for something good and worthwhile.

—Irene Worley
Bedford, Indiana

A FRIEND

What is a friend? I'll tell you. It is a person with whom you dare to be yourself. Your soul can go naked with him. He seems to ask you to put on nothing, only to be what you really are. When you are with him you do not have to be on your guard. You can say what you think so long as it is genuinely you. He understands those contradictions in your nature that cause others to misjudge you. With him you breathe freely—you can avow your little vanities and envies and absurdities and in opening them up to him, they are dissolved in the white ocean of his loyalty. He understands—you can weep with him, laugh with him, pray with him—through and underneath it all he sees, knows and loves you.

A Friend, I repeat, is one with whom YOU DARE TO BE YOURSELF.

AWARD OF MERIT

The Award of Merit is a special recognition given annually at the state meeting to chapters that have carried out a well-rounded program based upon national and state objectives and projects. A well-rounded program includes educational, service, and social activities; activities in which class, home, and FHA experiences work together; and cooperative activities with other groups.

The members of the State Award of Merit committee give valuable service in evaluating chapter applications for the Award of Merit, in revising Award of Merit materials, and in taking care of the other details of the committee.

The Award of Merit was developed very early to guide chapters in developing a well-rounded program. The first state newsletter, dated September, 1938, includes a page entitled "List of Requirements for the Award of Merit".

Through the years the requirements have been revised and improved so that they might better serve as a means of chapter program evaluation. A revision was prepared in 1957 by the Advisory Board and Award of Merit Committee. The newly prepared requirements were used for a two-year period, following which they were reviewed in the subregional meetings at the 1959 state meeting. On the basis of recommendations made, the Award of Merit Committee devised an Award of Merit Handbook which was presented in tentative form to all chapters in the fall of 1961. In the summer of 1962 the committee made further changes, after which the 1962-65 Award of Merit Handbook was distributed to all chapters in the fall of 1962.

A NOTE ABOUT NATIONAL FHA PUBLICATIONS

The Ohio Association encourages local chapters to read and contribute to TEEN TIMES, the national FHA magazine. Every chapter that has paid dues receives this magazine automatically. The other publications which may be ordered from the national office are listed each year in the Program of Work Calendar of the Ohio Association. Order blanks for these are made available to chapters each fall.

The national headquarters address is:

Future Homemakers of America
Office of Education
U. S. Department of Health, Education, and Welfare
Washington, D. C. 20202

1964-65	237

PUBLIC RELATIONS

Public relations activities are recognized as essential to the Future Homemakers organization. It is important to inform as many people as possible about our purposes and program. Local chapters are encouraged to write articles for magazines and newspapers. Many chapters have arrangements with the local county and town newspapers for releasing FHA News regularly or as feature items for interpreting the home economics program. It is hoped that chapters will write about state and national FHA events (such as state and national meetings and National FHA Week) in addition to telling about local activities.

Appearances on radio and television programs, participation in state and county fairs, and person to person contacts are other excellent opportunities for promoting good public relations.

Through the years FHA chapters have held meetings for school, home, and community members to acquaint them with the broad scope of the home economics program and to show how FHA fits into the program. The meetings have included Mother-Daughter Banquets, Luncheons, or Dinners; Parties for Parents and Friends; Daddy-Date Nights; Home Economics Open House; Faculty Dinners; School Assemblies; PTA Programs; Fashion Shows; and other special appearances for civic groups and organizations.

DEGREES OF ACHIEVEMENT PROGRAM

The National FHA Organization established the plan for Future Homemakers to earn four degrees—the Junior, Chapter, State, and American Homemaker degrees. Work on these degrees is optional with each chapter.

The degrees give special recognition to individuals who have successfully completed activities leading to the attainment of the following goals: gaining a better understanding of the FHA organization: growing as an INDIVIDUAL, a member of a HOME, a member of a CHAPTER, and a member of a SCHOOL and COMMUNITY: and showing how the work done has contributed to the purposes of the National FHA organization.

Each degree must show evidence of the candidate's growth beyond the previous degree. The primary purpose of the Junior Degree program is to help the candidate to learn about the FHA organization and to become an intelligent member. The primary purpose of the Chapter Degree program is for the candidate to continue growing as an FHA member and to help others to have a better understanding of FHA. The primary purpose of the State Homemaker Degree program is to provide opportunities for the candidate to develop greater maturity in personal growth, in creative leadership, in management, and in decision making.

The Junior and Chapter Degrees may be conferred by local chapters. The State Degree is conferred by the State Association at state meetings. A state degree committee serves to evaluate the applicant's work and to determine whether or not she has earned the degree. The State Degree Committee also takes care of the other business and details of the degree program, including revising the manuals.

The state degree program in Ohio had its first roots in the years that preceeded the official national founding in 1945. The first state homemaker degrees were presented in Ohio to four girls in the spring of 1947. The number of girls earning the degree has grown through the years, with 328 degrees being presented at the 1965 meeting. The total number of Ohio girls who have received the degree during the first twenty years of the association's history is 3202. Many more thousands of Ohio girls have received the junior and chapter degrees.

Three Ohio girls received the American Homemaker degree before it was discontinued by the national organization in 1951. They are:

Joy Linn Taylor (Mrs. Kenneth) Holmes-Liberty Chapter	1948
Lois West Williams (Mrs. Gordon) Waverly Chapter	1949
Jeannette Henderson Coolville Chapter	1951

Appreciation is expressed to Miss Mildred Reel, National Adviser, for her help in supplying certain information for this history.

Local Chapters Should Keep Their History

This 20-year history focuses attention on the great importance of keeping accurate records and well-organized files. Local chapters are urged to keep an accurate history of their own activities. A well-kept scrapbook, which includes photographs and newsclippings, is a great asset to every chapter. It is helpful, if funds are available and if there is an amateur photographer in the group (member, adviser, or chapter mother), to designate someone to be responsible for taking pictures of local chapter activities.

In addition, each chapter should have a well-organized FHA file which includes records of local history as well as:

- Directories of Ohio Chapters
- State Program of Work Calendars
- Mailings from the State Office
- Printed programs from subregional meetings, camps, and state and national meetings
- State Newsletters
- TEEN TIMES Magazines
- Award of Merit Materials
- Degree Materials
- Official Guide, Chapter Handbook, and State Constitution

TWENTY YEARS OF PROGRESS — A SUMMARY CHART

NATIONAL OFFICERS FROM OHIO — Lois West Williams, Waverly Chapter, Vice President, Central Region, 1948-49; Joyce Falor Tavtigian, Wauseon Chapter, Parliamentarian, 1953-54; Dawn Reinhard Heikkila, Holmes-Liberty, Bucyrus Chapter, Historian, 1962-63.

NATIONAL HONORARY MEMBERS FROM OHIO — Dr. Hazel Price and Dr. Ivol Spafford.

(Married names are used when known.)

CREED

We are the Future Homemakers of America
We face the future with warm courage
And high hope.

For we have the clear consciousness of seeking
Old and precious values.
For we are the builders of homes,
Homes for America's future.
Homes where living will be the expression of everything
That is good and fair.
Homes where truth and love and security and faith
Will be realities, not dreams.

We are the Future Homemakers of America
We face the future with warm courage
And high hope.

*AREA VOCATIONAL SCHOOLS; *FEDERAL AID; *STATE LEGISLATION; *FACILITY EXPANSION; *PROGRAM DEVELOPMENT

Over 400 area vocational schools were in operation and 132 were in construction or planning stages in 1964. There were Federal Funds and pending or enabling state legislation in 31 states to increase support for facility expansion. This report provides a state-by-state summary of current progress on area vocational school development. (JM)

SUMMARY OF STATE DEVELOPMENTS

Providing occupational training for youth and adults on an area basis is now a well-established concept of the educational system in the various States. Over 400 area vocational and technical schools are now in operation throughout the nation, and 132 such schools are under construction or in the planning stages.

Lack of funds in the States has hindered construction of new schools. Now, for the first time, Federal matching funds are available to the States for the construction of area vocational and technical education school facilities under the provisions of the Vocational Education Act of 1963 (P.L. 88-210).

Some indications of the progress in fiscal 1964 in the development of area vocational and technical schools are:

- .. 52 new area schools began operation
- .. 31 area schools are under construction
- .. 101 new area schools are in the planning stages
- .. 63 established area schools have added new facilities
- .. 30 established area schools are planning new facilities
- .. 83 established area schools are offering or planning to offer new programs, or to expand present programs
- .. 31 States reported new pending or enabling legislation to increase the number of area schools within the State, to expand existing facilities, or to establish systems of area vocational and technical schools
- .. 10 States reported studies in progress to explore needs for new area schools, additional facilities, or needs for new or expanded programs

The efforts being made by the various States toward promoting area vocational and technical education schools and programs are summarized in the following pages.

ALABAMA

The 1963 State Legislature passed legislation which provided for construction of 15 additional State vocational and technical schools, 4 technical junior colleges, and 10 State junior colleges. Construction costs were limited to not more than $350,000 annually for operation and maintenance.

Post secondary preparatory technical education programs were offered at State vocational and technical schools located in Decatur, Dothan, Huntsville, Mobile, Montgomery, and Tuscaloosa. Alabama A&M College, Normal, offered these programs for the first time in fiscal 1963.

Supplementary programs for adults were operated by local boards of education and State vocational and technical schools to serve the needs for adult training in the Mobile, Birmingham, Gadsden, and Huntsville areas.

ALASKA

The Nome Area Vocational School is very near completion and preparation is being made to use it for Manpower and ARA projects in the fall of 1964. The Bureau of Indian Affairs has agreed to provide dormitory facilities by late 1966.

The Nome Area Vocational School will serve people north of the Yukon, and legislation was passed for a future area vocational school in Kodiak.

Alaska feels that there should be an area vocational school where the center of population is, and it has been the affirmative thinking of school educators of the public schools as well as the community college in the Anchorage area that there is need for an area vocational school in or about Anchorage. The vocational programs presently operating in the Anchorage public schools are under the supervision of the Anchorage Community College; therefore, this community college is serving area vocational needs.

ARIZONA

The State Legislature recently authorized a Statewide system of junior colleges, and made provision for students to transfer from one district to another to avail themselves of training commensurate with their abilities and interests.

The Governor's Committee on Vocational and Technical Education, made some specific recommendations which were incorporated into a bill that was passed by the last session of the legislature. This new Act authorizes two or more high school districts to cooperate with the junior college district in offering vocational and technical education. It also increases the State appropriations for vocational and technical education approximately $300,000 for fiscal year 1965.

Eighty of the 104 high schools in Arizona offered vocational programs in fiscal 1964. Post-secondary preparatory technical education programs were offered at Phoenix College, Phoenix; Arizona State College at Flagstaff; and Arizona Western College in Yuma. Curriculums were approved for technical education in two new junior colleges; i.e., Graham County Junior College at Thatcher and Cochise College at Douglas. Phoenix College has increased its curriculum offerings from 5 to 12 in technical education for fiscal 1965.

Two more junior colleges are planning to offer technical education.

ARKANSAS

Appropriations for the regular program of vocational education were increased by the 1963 State Legislature by $104,000 annually for the 1964-65 biennium. Funds were also appropriated for construction of a minimum of two vocational-technical schools. A new vocational-technical school opened in September 1963 at Morrilton, and a similar school is now under construction at A.M.&N. College, Pine Bluff. For a number of years the Arkansas Vocational-Technical School in Pine Bluff has offered supplementary courses for adults on an area basis.

CALIFORNIA

Among new statues passed by the 1962-63 Legislature were:

> Creation of the California Commission on Manpower, Automation, and Technology, which, among other things, will study and analyze the extent, character, and capacity of vocational education.
>
> Authorization for high schools and junior colleges to share use of vocational education facilities, programs, and personnel.
>
> Authorization for the creation of specialized high school facilities for vocational education, usually on a county or area basis.

It appears there will be increasing pressure at the 1965 session for a stepped-up vocational program for students not destined for college.

In 1963-64, 53 of the junior colleges in the State offered programs and/or courses in technical education. More than 180 curriculums are offered in 20 fields of specialization, ranging from a Statewide uniform electronics program to highly individual and vital curriculums in aircraft and missile construction and design.

COLORADO

The legislation enacted during fiscal 1962-63 affecting vocational programs for fiscal 1964 related only to appropriations, which remained unchanged.

The area designated center concept has been well defined. Five junior colleges, two 4-year colleges, and three secondary school districts have been designated and are serving adequately to meet the present needs within the State. One district, the Boulder RE-2 system, has developed definite plans for a vocational high school which is designated to serve the needs of all in-school youth who might want and can profit from vocational offerings.

COLORADO (cont'd)

Colorado's five junior colleges are committed to the conduct of programs of vocational and technical education.

Investigation is being made of the possibility of developing area centers in the less populated portions of the State through the use of portable, packaged training facilities.

CONNECTICUT

The State Board of Education has approved plans for the expansion of facilities in the Regional Vocational-Technical Schools in six areas - Sanbury, Norwich, Willimantic, Waterbury, Bridgeport, and Torrington - at a cost of $4,345,071 for the 1965-67 biennium. These now await action by the 1965 Legislature. The site has been purchased for the lower Naugatuck Valley School and construction should start soon.

There has been an expansion of post high school trade programs, and Torrington and Manchester Schools will open electronics courses in September 1964.

In September, 1964, the new Waterbury State Technical Institute located in Waterbury, will be opened with an expected freshman enrollment of 200 students, making a total of four technical institutes in operation within the State. The State Board of Education has approved plans for the expansion of facilities in three areas - Hartford, Norwich, and Waterbury - at a cost of $3,487,576 for the 1965-67 biennium. These now await action by the 1965 Legislature. The expansion of facilities will provide additional classrooms and laboratories for new programs to be developed under the Vocational Education Act of 1963.

In the Evening Technical Institute Division, beginning in September 1964, special unit courses in Distributive Education and Office and Business Education will be offered for the first time. It is planned to develop this program by September 1965 into 2-year day and 5-year evening programs offering an Associate Degree. Also, starting in September 1964, there will be a 2-year non-degree program in Industrial Drafting and Industrial Electronics to train industrial type technicians (not engineering technicians). Plans are also being formulated to offer post secondary apprenticeship courses to advance apprentices beginning in September 1964.

DELAWARE

The appropriations made in fiscal 1964 provided additional funds for the expansion of area vocational-technical facilities in Sussex County in the amount of $791,700 for the Sussex County Vocational-Technical Center serving 14 schools; an appropriation of $2,576,450 for the construction of a new area vocational-technical facility in Kent County serving 6 schools ($100,000 of private funds were also made available for the Kent County facility); with an additional appropriation of $3,225,000 for new vocational-technical facilities in New Castle County.

For the first time, legislative authorization involved budget items in all schools having vocational-technical programs that would provide more adequately for the actual costs of vocational-technical programs of high standards. In addition to this enactment the State Board was given the authority through this legislation to analyze programs and certify each year specific areas of vocational-technical education to which the legislation should apply. This should guarantee a continued up-dating and expansion of programs.

Because of the additional administrative needs due to expansion, the State Board for Vocational-Technical Education recommended and received legislative approval for new positions - Occupational Information and Career Service and State and Federal Fiscal Relations. Direct relationship was noted between expanded activities of the Manpower Program and its need for facilities which may be made available under the regular State legislation.

A study of needs in New Castle County, financed by the Delaware School Auxiliary recommended that there be 3 areas where additional facilities should be provided including a post high school technical program. The facility and the area to be served in New Castle County are being planned by the State Board for Vocational-Technical Education.

DISTRICT OF COLUMBIA

All vocational and technical schools in the District of Columbia are area schools in that they serve the entire jurisdiction of the District. The total enrollment in the vocational high schools continues to increase and now exceeds the total capacity of the schools. Recent staff conferences have resulted in the opinion that the D.C. Public Schools can best serve the community and the world of work, under the provisions of this new Act, in part, through the construction and development of a single (consolidated) vocational-technical school center or complex. This replacement for the present five vocational high schools would have a capacity of about 3,000.

FLORIDA

The Florida Legislature granted an increase in Minimum Foundation Program Units sufficient to care for anticipated expansion in high school, junior college, and adult vocational programs. Unit requests for the Distributive, Cooperative, and Business Education Section were granted for 1964, but were frozen at that level for the second year of the biennium.

Voters of the State approved a bond issue in November 1963 to provide construction funds for several types of educational institutions. Most of the funds are intended for the construction of university and junior college facilities, but a portion will also be used for area vocational and technical centers. Plans are currently in progress for a new area vocational and technical school to be located in Leon County. The site has been purchased and construction will be financed in part from the bond issue.

The Technical Education Section was established as a separate section as of July 1, 1963.

Fourteen junior colleges, 10 high schools, and 5 post secondary institutions, including adult vocational education centers and technical institutes, in Florida offer vocational-technical programs. The State Legislature authorized the establishment of vocational centers in any county; however, no funds were appropriated for construction of these facilities.

New technical education centers were completed in 1963 in Orange and Pinellas Counties to provide training growing out of the industrial needs of those areas.

Currently in progress is a comprehensive study of vocational education in Florida. The study will attempt to achieve the following purposes.

1. To review the current Statewide program of vocational, technical, and adult education in light of present and potential needs.

2. To explore the role of area vocational schools (comprehensive high schools, vocational-technical high schools, vocational schools and, under certain circumstances, junior colleges and universities in meeting current and potential training needs and, if found significant, to develop criteria for establishing construction priorities.

3. To review current operational emphases and the potential for extending service.

4. To review current training articulation and recommend appropriate structural modification.

The findings, conclusions, and recommendations of the study are to be available for use by members of the 1965 Legislature in drafting appropriate legislation to meet the educational needs in the areas of vocational, technical, and adult education.

GEORGIA

The building program in Georgia, involving State and local funds, will cost approximately $25 million and will result in 28 area vocational and technical schools throughout the State.

Fifteen new area vocational and technical schools located in Albany (2), Augusta (2), Columbus (2), Rome (1), Marietta (1), Thomasville (2), DeKalb County (1), Moultrie (1), Swainsboro (1), Valdosta (1), and Thomaston (1) are in operation. Construction has been started on new schools at Griffin (2), Waycross (2), and Athens (1). Plans are in the final stages and construction should begin soon on schools at Macon (2), Atlanta (1), and Savannah (2). Three additional schools were recently approved by the State Board of Education. These will be located in LaGrange, Gainesville, and Walker County.

In addition to the system of area vocational and technical schools, Georgia owns and operates two State vocational and technical schools: The North Georgia Technical and Vocational School at Clarkesville, and the South Georgia Technical and Vocational School at Americus. These schools are equipped with modern, new dormitory facilities for boarding students. These State schools, as well as the area schools, offer training in industrial, technical, business, and health occupations.

HAWAII

The 1963 State Legislature authorized funds for the construction of a new welding shop, electricity shop, and administration, library and classroom building for the Honolulu Technical School. Plans are moving ahead for the construction of a new classroom building at the Hawaii Technical School in Hilo, and for additional buildings for the Maui Technical School.

Hawaii's system of area technical schools has been developed over almost 40 years to provide pre-employment and upgrading programs in trade, technical, business, and service occupations. There are presently 5 technical schools in operation and additional State funds are needed to establish 2 additional schools on the island of Oahu and to increase the offerings in the existing programs.

Approximately only 8 per cent of the high school graduates are enrolled annually in trade and technical training programs and a substantial number of students are denied entrance because of insufficient programs and inadequate facilities.

IDAHO

Vocational-technical training facilities are inadequate in all areas of the State. Idaho State University School of Trade and Technical Education has a maximum capacity of 500 students. Current enrollment exceeds this and many students are turned away each year. Idaho State University has included a request for a new building in the budget for the next biennium.

A new building to house electronics and drafting technology has been completed at Boise Junior College. This new building merely replaces rented facilities and the completion of the building will not increase the number of students that can be accommodated.

North Idaho Junior College has just recently completed a new vocational-technical facility; however, after the first year of operation (1962-63) this building was filled to capacity and the school has a waiting list of students.

The Magic Valley area has requested consideration of an area school which would probably be located in or near the city of Twin Falls. A survey of community needs is currently under way. Tentative plans for an area school located in the North Central region of the State are being made. The school will probably be located near Lewiston and could be associated

with the Lewis and Clark Normal School. Generally, new facilities would need to be constructed; however, a portion of the existing buildings at the Lewis and Clark Normal School could be remodeled for a limited program.

Two junior colleges and Idaho State University conducted post secondary preparatory programs in technical education in fiscal 1963. Three secondary schools and one State college offered supplementary technical education training programs for adults in fiscal 1963.

ILLINOIS

H.B. 1326 (73rd General Assembly, 1963) appropriated $643,781 to be used as matching funds for Title VIII programs. This will allow 3 to 1 reimbursement for technical education programs. (25% local, 25% State, 50% Federal) In effect, Illinois schools can double their technical education programs at no greater expense to the local school.

Enrollments in technical education programs increased 20% in 1963. Post secondary preparatory programs were offered in 18 school centers, and supplementary courses were offered in 8 school centers.

Technical education enrollments, September 1963: Preparatory classes - 60% in 10 junior colleges, 16% in 2 State technical institutes, and 24% in high schools supporting post high school technical education programs; supplemental courses - 15% in 3 junior colleges and 85% in high school adult education programs.

INDIANA

The 1963 State Legislature increased the general appropriation for vocational and technical education by almost 100%.

The Commission on General Education is presently considering a regulation which in a sweeping revision would increase the requirements for vocational education courses in almost all first-class and special first-class high schools in Indiana. The regulation will provide that in order to qualify for a first-class commission, all secondary schools shall provide facilities for and offer at least one approved vocational education major, approved under the State Plan, in at least three vocational areas or combinations thereof. The regulation will add requirements for special first-class high schools, and first-class high schools with enrollments of over 1,200.

INDIANA (Cont'd)

Plans have been developed for an area vocational and technical school to serve the needs of the southeastern section of the State. Area schools are presently in operation at Bloomington, Evansville, Marion, Terre Haute, Vincennes University, South Bend, Bedford, Fort Wayne, and Indianapolis. New data processing programs have been established at Purdue University Extension Centers at Hammond, Indianapolis, and Fort Wayne, and at Vincennes University. Electronics programs have also been established at the Purdue Center in Indianapolis and also Fort Wayne.

IOWA

Technical education programs and schools are being added as fast as possible. Several pilot schools started in the fall of 1963. These schools offered trade and industrial courses as well as technical courses.

Iowa has 16 public community or junior colleges. Since the passage of NDEA, 5 of these colleges have been declared area schools and are offering practical nurse and preparatory technical education programs. In the fall of 1963, one college started a program in auto mechanics; and another at Iowa Falls (Ellsworth Junior College) started a 2-year course in Mid-Management (distributive education).

Two area schools for vocational and technical education are in the process of development. One of these is a 4-county area in the northwest corner of the State, and the second is a 10-county area in the south-central part of the State. It is planned that these two developments will be well underway within a 2-year period.

Plans are underway to expand the above programs under the new Vocational Education Act of 1963:

1. Plan to approve several other community colleges as area schools. One of these plans to start work in five occupational areas.

2. Additional programs are underway in the two pilot area schools.

3. Additional programs are passed the planning stage in the other area schools.

4. New programs are developing in existing comprehensive high schools, that will add greatly to the training being offered.

5. Lay people, educators and legislators are showing tremendous interest and enthusiasm to serve all the people in all communities with realistic vocational training.

KANSAS

Kansas permissive legislation for the establishment of area vocational and technical schools was passed by the Kansas Legislature in 1963. Extensive local and State planning during the months which followed resulted in the State Board approving 8 applications to establish vocational and technical schools in 1964 and 1965. The establishment of these 8 schools will represent the first phase of the development of a Statewide system of 15 to 20 schools so located as to make the training readily available to all Kansas youth and adults.

Local bond issues have been voted in 3 communities and others are being planned which will provide the funds to construct new, modern buildings to house these schools. The 1964 Legislature appropriated $700,000.00 as a State share in financing the establishment and operation of the approved schools during fiscal year 1965. The appropriation bill provided that no State funds be used in the construction of area vocational schools and that State funds may be used to pay 20 percent of the cost of equipment and 25 percent of operational and instructional costs involved. It is planned that local and Federal funds will be used to pay the remaining costs of operating the program.

Curriculums are being planned to train workers of less than professional level in farm and farm-related occupations, industrial and health occupations, home and community service occupations, and business occupations included in the distributive and office fields.

A goal has been established to have the Statewide system completely organized and operational by 1975 as an integral part of a coordinated Statewide effort to promote State economy.

KENTUCKY

The 1964 legislature passed legislation making it possible for the State Board of Education to establish area vocational schools in any city or county which, in its discretion, would best meet the vocational needs of the Commonwealth. The State Board is now operating 10 area vocational schools and new legislation would make it possible to operate additional schools as needed.

During 1963, a $1 million building was completed in Covington to serve the northern Kentucky area. Additions costing $500,000 each were added at Mayo State Vocational School, Paintsville; and West Kentucky Vocational School, Paducah. In January, 1964, a new area vocational school costing $500,000 was completed at Madisonville. New buildings are under construction at Ashland, Harlan, Hazard, Somerset, and in Jefferson County. The buildings at Somerset, Harlan, and Jefferson County will be ready for occupancy at the beginning of the school term in September 1964.

In addition to the area vocational schools operated by the State, extension centers and buildings are planned at Elizabethtown, Bardstown, and Hopkinsville.

LOUISIANA

Louisiana operates an extensive system of 27 area vocational and technical schools which provide training for all sections of the State. State legislation provides that students residing anywhere in the State may receive training in any of these area schools which provide vocational training in the program they have selected. All of these schools offer training for trade and industrial occupations and most of them offer one or more technical training programs.

New area vocational schools have been completed in St. Martinville and Opelousas. A branch school is being planned and will be operated by the Sullivan Memorial Trade School, Bogalusa, to serve the Hammond area. A new branch of the Jefferson Parish Trades School has been completed in Metairie. New area vocational schools are being planned in Morgan City, Alexandria and Plaquemine. New facilities for the Shreveport Trade School are now under construction. New facilities will be provided for the Ouachita Valley Vocational-Technical School in Monroe.

MAINE

In 1963 the State Legislature appropriated $640,000 for a building and equipment and $139,722 for one year's operating expense for a new school in Androscoggin County. Two pieces of legislation were passed appropriating $366,000 for building renovation and purchase of equipment, and $520,500 for two years' operating expense for the school at Presque Isle. The Legislature also authorized $25,000 to make a survey of the need for a vocational and technical school in Bangor.

In Pennobscot County a site for a vocational and technical school is authorized by a legislative appropriation of $25,000.

The Maine Vocational Technical Institute has served as an area vocational school at the post high school level since 1946. Started at Augusta on a limited scale, it was moved to the site of Old Fort Preble, South Portland, in 1952. It now offers 8 courses and enrolls approximately 350.

Northeastern Maine Vocational Institute, Presque Isle, enrolled its first class of about 100 in September 1963.

MARYLAND

Two-year vocational and technical education programs are offered at the Catonsville Community College, Hartford Community College, Allegany Community College, and Montgomery Junior College. These institutions serve the needs of the communities in which they are located and, in this respect, are area vocational schools.

Training opportunities at the Merganthaler Vocational-Technical High School, Carver Vocational-Technical High School, Baltimore Polytechnic Institute, and Baltimore Junior College are available only to students whose parents reside in Baltimore City.

Five comprehensive high schools in Montgomery County, two in Washington County, and one in Wicomico County offer vocational and technical programs on an area basis.

MASSACHUSETTS

The 1963 State Legislature authorized certain industrial, technical, agricultural, and vocational schools to establish courses beyond the secondary level and to grant certain degrees to persons completing such courses of instruction. If pending legislation becomes law, it is supposed that financial assistance will be provided for additional teacher-training equipment.

All vocational schools in Massachusetts are, in effect, area or regional schools and are operated under local authority. If the town of residence does not offer the type of vocational and technical education desired by the student, the town of residence pays the tuition of the student at the nearest facility offering the type of training desired.

Eight new area or regional vocational-technical schools are under construction at an estimated cost of $153,500,000. Additions costing an estimated $18.5 million are under construction at the Beverly, Holyoke and Provincetown Trade Schools. A $1 million addition to the Springfield Trade School was opened in January 1964.

MICHIGAN

Interest in area programs at the local level is at an all-time high. Amendments to the Intermediate School District Act now permit the financing of area programs by the intermediate district, such programs to be operated by constituent school districts and/or community colleges. Amendments to the Community College District Act permit one or more counties or two or more K-12 school districts to form a district for the sole purpose of operating an area vocational and technical education program. Both of these Acts require approval and designation by the State Board of Education of area program service areas.

Perhaps a dozen or more areas in the State are presently involved in some stage of planning for the development of area vocational and technical education programs. The most promising of these involve cooperative planning between local school districts, community colleges, and intermediate school districts.

MICHIGAN (cont'd)

Several school districts are now cooperatively operating limited vocational education programs on an area basis. These involve sharing the services of a director of vocational education, exchanging students, or operating cooperative training programs on an area basis.

Area vocational and technical education programs are offered at the post secondary level by 15 of the 18 community colleges presently operating in the State: Alpena, Benton Harbor, University Center, Flint, Grand Rapids, Dearborn, Highland Park, Jackson, Battle Creek, Lansing, Muskegon, Petoskey, Traverse City, Port Huron, and Warren. An additional 10 community colleges are in various stages of development.

Eight institutions of higher education offer terminal 2-year programs on an area basis. The Michigan Rehabilitation Institute provides vocational education programs for handicapped persons. These nine institutions serve students throughout the State.

MINNESOTA

The 1963 legislature increased funds for vocational education to $3,800,000 for fiscal year 1963 and $4,500,000 for fiscal year 1964.

The Legislature passed a bill providing for the establishment of a State Board for Junior Colleges. All 11 public junior colleges will become State administered on July 1, 1964, under the new State Board for Junior Colleges. The law also permits the establishment of three additional junior colleges when funds become available.

The Legislature also made provision for the construction of a new State college in the southwestern part of the State. The location of this new institution will be in Marshall and will provide curriculums in the liberal arts and certain technical areas yet to be decided.

The area vocational and technical schools in Minnesota now number 15 with 4 additional schools scheduled to start operation on or before September, 1965. The new schools will be located in Canby, Jackson, Granite Falls and Brainerd. Minnesota now has area schools located in all geographic areas except the southwestern part of the State where at least one school will be started at an early date.

MINNESOTA (Cont'd)

A study is now in progress to determine further needs for additional area vocational and technical schools and for the expansion of existing schools. The study report will be made to the State Board in July, 1964. All area schools are administered by local school districts and provide vocational and technical education programs at both the high school and post high school levels.

Nearly all programs offered in the area vocational and technical schools have waiting lists of students desiring training. This has resulted in many schools operating more than one session each day. A few programs operate 20 out of 24 hours; several operate three 6-hour sessions a day and nearly all operate some programs beyond the regular day and evening hours. More schools are operating 12 months rather than the conventional 9.

The St. Paul area school, which presently has a poor physical plant, is being constructed on a new site at a cost of over $7 million.

Several smaller schools have voted bond issues for additions to overcrowded area vocational facilities. Some of these are new schools in operation less than two years and are already in need of more space.

MISSISSIPPI

With expected new appropriations from both the National Congress and State Legislature, Mississippi should be able to greatly expand its technical education program during the next two years. If these appropriations are made, Mississippi should be able to meet the needs for technical education in the near future.

Two new buildings have been completed at a cost of $25,000 at Northwest Mississippi Junior College, and it is anticipated that another building costing approximately $240,000 will be added soon to house vocational and technical programs.

Two new buildings, costing $165,000, have been completed at Copiah-Lincoln Junior College to expand the vocational and technical program; and a new building has been constructed at Hinds Junior College, costing $400,000, to accommodate vocational-technical programs.

Perkinston Junior College has plans to build two more buildings - approximate cost $280,000 - to expand their vocational-technical offerings.

MISSOURI

Junior college legislation passed by the 1961 General Assembly, together with amendments of the 1963 General Assembly, is making possible expansion of vocational and technical education at the junior college level. Four junior college districts have been formed and all have initiated new programs for the 1964-65 school year. The largest of these districts, The Junior College District of St. Louis, St. Louis County, has an assessed valuation of nearly $4 billion and is proceeding rapidly toward the building of 3 new facilities for technical education. Two additional districts are in the process of development. An additional appropriation of $140,000 in State funds will provide additional matching funds for programs in all services and will provide for expansion of practical nurse training programs and technical education programs. Additional State funds provided under the Foundation Program, approximately $28-1/2 million, will provide local schools additional funds of a general nature and, therefore, free them to expand vocational programs during the next biennium.

The increased need for vocational and technical education programs in Kansas City has stimulated the creation of 6 new vocational and technical centers in operation at the beginning of the 1964 fall term. The three new centers at Central, Van Horn and Westport High Schools are entirely new facilities, fully equipped and built at an approximate cost of $1.75 million. The other centers are at Lincoln, Manual, and Northeast High Schools.

Three secondary school districts in the State serve for vocational and technical training on an area basis by providing such services by contract to surrounding school districts. Programs in these schools are expanding rapidly and at least three additional ones are expected to start programs in the 1964-65 school year.

Since the passage of NDEA, Title VIII in 1958, technical education programs in Missouri are now in operation in 21 communities.

MONTANA

The 1963 State Legislative Assembly granted a 25 percent increase in funds for vocational and technical education. Also, changes were made in area vocational school statues that enable a more realistic tuition figure to be charged to those counties sending students to area vocational schools.

MONTANA (Cont'd)

Studies are underway to devise proposed legislation for the 1964 legislative assembly that will enable area vocational schools to be more adequately financed and to establish a base upon which the financial structure may be founded.

Preparatory technical education programs were offered in 1963-64 at Northern Montana College and at three high schools - Great Falls, Custer County and Helena. Extension courses were offered in 2 junior colleges and 8 high schools.

At present, the State Board for Vocational Education is re-examining the policies and criteria in light of the Vocational Education Act of 1963. It is hoped that this will lead to the development of more area vocational schools and the expansion of programs in those schools which are currently operating.

NEBRASKA

The 1963 State Legislature considered the establishment of several State-operated post high school technical schools. This matter was referred to an interim study committee which has held a number of meetings during the past year preparatory to their report to the State Legislature in January 1965.

The State Board of Vocational Education directed that a study be made of the needs for vocational education in the State. In addition, a community-wide study is being conducted in Omaha.

Presently, we have in Nebraska, two area vocational schools in addition to three area schools for Practical Nursing. Our Omaha Technical High School serves both Douglas and Sarpy Counties, and offers three programs in technical education.

New school facilities were completed in 1963 at the Nebraska Vocational Technical School at Milford. Currently, an additional 180 student dormitory is being rushed to completion for occupancy in September 1964. This school serves the entire State and offers preparatory technical education in 11 areas including a rather new program in electronic data processing.

Recently, the Lincoln Public Schools were approved as an area school, for only technical education, to serve Lancaster County. It is anticipated that such programs will be in operation during 1964-65.

NEVADA

The State Legislature appropriated $216,599 for the 1963-64 year, and approximately the same amount for 1964-65 for vocational education. The Assembly Ways and Means Committee requested the State Director to present a recommendation for the establishment of area vocational and technical schools at the next special or general session of the Legislature, whichever comes first.

Technical education, since its inception in 1958, has had the most rapid growth of all of the vocational education services. Eight secondary schools have developed area programs, whereby students from surrounding schools are admitted to such programs.

Centers where extension training programs are established include the University of Nevada at Reno, Las Vegas; Nye County School District, Tonopah; Mineral County School District, Hawthorn; Churchill County School District; one center each in the White Pine County School District, Ely, and the Ormsby County School District, Carson City; and a cooperative program whereby technical extension courses can be offered anywhere in the State through the auspices of the Statewide Services Division, University of Nevada, in cooperation with the State Vocational and Technical Education Division.

In Clark County, one of the fastest growing sections of the entire region, a survey has been completed to determine the feasibility of constructing an area vocational and technical center. The site is available -- 385 acres of Federal land between Henderson and Las Vegas. A study commission found that the defense oriented industries in the area felt such a center would have a "profound effect on the economy and society." A $19,000 Ford Foundation grant for a facilities laboratory helped to generate public support of a proposed bond issue.

A technical advisory committee was established to plan for a Southern Nevada Vocational-Technical Center. Two county-wide conferences were conducted to explain the purpose and need for a center. The Stanford University Schoolhouse Planning Laboratory was contracted to assist in the planning. Visits were made to numerous vocational-technical schools throughout the United States. The Clark County School District proposed a $37 million bond issue for overall school construction for the next three years which included $3 million for the initial construction of the Southern Nevada Vocational-Technical Center. The Center is planned to accommodate 5,000 students eventually. On May 5, 1964, the bond issue received overwhelming support. Construction is planned to start in the near future.

NEVADA (Cont'd)

The State Board for Vocational Education adopted a proposal to ask the Legislature to construct two area vocational and technical schools within the State.

This proposal was presented to the 1964 Special Session of the Legislature for study. The State Director met with the State Planning Board and received concurrence of the need. The State Planning Board is developing plans to ask the forthcoming session of the Legislature to finance or assist in financing the proposed facilities.

It has not been possible for the State Board to meet all of the requests for vocational and technical education programs. Lack of funds necessitated refusal of participation in preparatory and extension programs beginning in January 1964, since reallotted funds were not made available to the State during the current fiscal year.

NEW HAMPSHIRE

The 1963 Legislature provided $1,005,000 for the purchase of land and construction of a new vocational and technical school to serve the northern section of the State; $1,005,000 to replace the present facility at Portsmouth, to serve the southeastern section of the State; and $1,272,000 to replace the present facility at Manchester, to serve the south-central part of the State.

The 1961 Legislature provided $1,650,000 for a centrally located Technical Institute which is presently under construction and will be completed for occupancy not later than September 1, 1965.

Fiscal year 1964 will result in completion of the four post secondary schools and the further development of all areas of vocational education on the secondary school level in grades 11 and 12 where the school is of sufficient size to support an adequate program.

NEW JERSEY

Vocational-technical education and training is being offered in four city, one regional and 13 county-wide high schools or centers at either the secondary or post secondary levels. Eight of the latter institutions are utilizing rented facilities and are operating as area-wide pilot, technical institutes.

A notable step was achieved through the enactment of the New Jersey County College Law in 1962 but which became effective July 1, 1963. The law stipulates that "technical institute type" curricula may be offered as well as many new area-wide vocational-technical curricula, in extension.

Bergen County - with its secondary emphasis, has been voted the sum of $3,750,000 for the construction of a new wing to the existing structure and $500,000 for the purchase of new equipment. These added facilities will permit a substantial increase in enrollment and in the number of programs offered.

Burlington County – a new participant, initiated its post secondary, preparatory technical programs as well as adult courses, on an evening basis, this past January in rented facilities. At this writing, the County Board has been authorized to utilize the sum of $500,000 for the purchase of a permanent and suitable site, the development of a "master-plan" and for the initial construction phases. Additional funds have been assured for the completion of the proposed project.

Camden County - with both secondary and post secondary objectives has completed the construction of a new wing which involved the expenditure of $625,000 for building and for needed equipment. A second wing has been planned and the sum of $435,000 appropriated for alterations, new construction, and appropriate equipment. This project will be completed by September 1965.

Currently, a County Study Committee is finalizing its plans to re-survey the entire county to ascertain its latest vocational-technical needs at both levels of training and its report is due this November 1st.

Present projections indicate that as many as 3 new area-wide, vocational-technical centers may be constructed within the next 10 years to satisfy the growing needs.

Essex County - has expended approximately $1 million in altering and modernizing one of its Newark schools. In addition, the sum of $1,125,000 has been approved for the construction this summer of an addition to the Vocational and Technical High School for Girls. The establishment of a County Technical Institute or College to meet the county's post high school technical education needs is being considered with preliminary estimates running at about $6 million.

Middlesex County- has acquired a 50-acre site, which is appraised at about $200,000 on which to build its fourth county-wide vocational and technical high school. Plans are now being devised for a facility estimated to run at $2,500,000 for actual construction and about $500,000 for needed equipment.

The County has recently applied for and received permission to establish a 2-year County College. This required nearly 165 acres of land which comprised part of the Raritan Arsenal site and which was granted the County by the Department of Health, Education, and Welfare. There are 23 buildings on the acquired site which are adaptable for educational purposes. A master-plan will be developed for the permanent county-wide facilities and designed for an initial enrollment of 500 to 1500 students.

Monmouth County - has authorized the County Board to construct a $500,000 building for area-wide vocational training with programs initiated at the secondary and post secondary levels. Completion of the project is expected by September 1965.

Ocean County - is operating day and evening programs on a county-wide basis in rented facilities. Both post secondary technical education and health education programs are offered.

The County Vocational Board has 150 acres of land available for an educational center and specific plans for future vocational and technical needs are being weighed in conjunction with those of a proposed County College.

Passaic County - recently leased the Paterson City vocational-technical facilities for a period of three years. A master-plan for a new county-wide vocational-technical educational center is being developed.

NEW JERSEY (Cont'd)

Warren County- will initiate its third 2-year post high school technology this September. A fourth is planned for the following year.

The County Vocational Board is making plans for the purchase of a suitably large parcel of land on which to build a sizable permanent vocational and technical institute to replace the present one.

NEW MEXICO

Legislation passed during 1963 provides for the further development of technical and vocational institutes and junior colleges.

An act passed in 1963, relating to junior colleges, provides for the creation, financing, supervision and dissolution of junior college districts; and prescribes the power and functions of such institutions.

Another act (1963) authorizes creation of technical and vocational institutes in any county; provides for formation, financing, supervision and dissolution of technical and vocational institute districts; and prescribes the powers and functions of such districts.

Area vocational schools are in the formation stage in five local communities, but further State legislation is needed.

NEW YORK

The future direction in technical education will be determined in part by the completion of area vocational education studies and the implementation of the recommendations of 21 multi-county vocational education studies.

A new Lewis A. Wilson Technological Center was established in Suffolk County, District III, by a Board of Cooperative Educational Services. The Nassau County Board for Vocational and Extension Education leased two additional buildings for technical education programs, and instituted a program of computer technology. During 1964, 7 new programs were started in the State in electronics, instrumentation, and computer programing. Lawrence began a program in electronics. Levittown started an instrumentation program. Buffalo, Syracuse, and New York City developed programs

for computer technology. Extension and improvement curriculum projects were conducted in 11 schools involving 24 technical programs. Of these schools, 6 introduced programs of numerical control; three, metallurgy technology.

In the summer of 1963 workshop institutes for preparing teachers for business data processing and computer programing were held at the State University of New York at Albany, Columbia University, New York University, and Syracuse University.

NORTH CAROLINA

The General Assembly in 1963 increased appropriations for vocational and technical education for the 1963-65 biennium by $7,079,716. In addition, the 1962 Assembly appropriated $1,500,000 for the 1963-65 biennium for experimental programs in vocational education in the secondary schools.

The State Legislature also passed a bill in 1963 revamping the entire higher education system in the State. It places the community college system under control of the State Board of Education and provides machinery for the conversion of Industrial Education Centers into comprehensive community colleges.

New technical education programs were offered in 1963 at the Centers in Asheville, Charlotte, Asheboro, and Kinston. Twenty Industrial Education Centers are in operation in the State, 14 of which offered preparatory programs in technical education 1963.

NORTH DAKOTA

The North Dakota State School of Science at Wahpeton is the only centralized vocational and technical school in the State. Students are enrolled from all of the 53 counties each year. This institution offers a wide variety of trade and technical training in addition to liberal arts, business, and pre-professional programs. The State has not as yet felt the impact of extensive industrial development.

NORTH DAKOTA (Cont'd)

Increasing numbers of employers are visiting the campus of the State School of Science interviewing students, especially graduates of Title VIII programs. We are pleased to report that with the exception of five 1964 graduates the school has placed all students on jobs in their respective fields. The placement director reports that these five are working but not necessarily in their field of training, some have gone back to the farm and others to their parents' business establishments.

Presently, the North Dakota State School of Science offers preparatory technical education in 8 areas, including new programs in Electronic Drafting Technology and Electronic Data Processing. The board has approved the School starting a course for dental technicians.

OHIO

The Legislature continued the present level of State financial support for vocational education for 1964. The Legislature also passed an improved joint vocational school district bill that makes provisions for including sections of two or more counties in the joint vocational school district; provides for options in the organization of the Board of Education; and identifies clearly the State funds to be made available under the additional vocational unit allocated to the joint vocational school.

In 1963 two-year post high school technical education programs were established in cooperation with the local boards in Ashtabula, Hamilton, Willoughby, and Springfield, bringing to 10 the total number of schools operating such programs in Ohio. In 1964, an additional technical education center was established in cooperation with the Columbus Board of Education making a total of eleven (11) such centers.

One area vocational center was established in 1963 and an additional one was approved under the new joint vocational school district law in Ohio. Four additional joint vocational school districts have been approved by the State Board of Education. Three of these districts have established their boards of education and have begun planning toward the organization of broad vocational programs.

OKLAHOMA

Area vocational-technical schools provide training for students in all parts of the State. Presently 8 State junior colleges, 2 technical institutes, and one trade school offer vocational and technical programs on an area basis in Oklahoma.

Two new buildings to house vocational programs are under construction at Northeastern A&M College, Miami, and a new building is in the planning stage at Eastern Oklahoma A&M College, Wilburton. The Oklahoma State University Technical Institute at Oklahoma City is planning a completely new campus near the Industrial Park. The University Branch at Okmulgee has moved the electronics program into a new modern building completed in early 1963. Eastern A&M College has completed a new Technology building, and many of the area schools have building plans in the drawing-board stage.

Oklahoma City has technical training programs in 11 high schools, and new technical programs are planned for selected high schools at Tulsa.

OREGON

The 1963 State Legislature appropriated sufficient State funds to provide for planned programs for the next 2-year period. Funds were also appropriated for community college buildings.

Oregon has 5 separate area community colleges and 4 community colleges operated by local school districts, all of which offer vocational and technical programs. In addition, one other area education district has been established and will start vocational programs in the fall of 1964. Another area education district is in the process of organizing.

A new plant was built for the Salem Technical-Vocational School, and a new building is scheduled for completion in 1964 at South Western Oregon College. Plans are underway for construction of new laboratories and classrooms at Blue Mountain College and Central Oregon College.

As a result of studies in the areas of wood products and forestry, programs in these areas have been organized.

Preparatory and in-service programs for law enforcement occupations have been developed on a Statewide basis and will be initiated in the fall of 1965. State and regional advisory committees have been established.

PENNSYLVANIA

Act 463, passed by the 1963 Legislature modifies the procedures for establishing area vocational and technical schools, increases subsidies to participating districts, provides for designation of attendance areas for area vocational and technical schools and technical institutes, and provides reimbursement for operation.

Presently, there are 8 area vocational-technical schools in operation. Two new schools are under construction, and 9 others have filed applications for construction of buildings. Twenty-three attendance areas have been approved by the State Board.

Since January, these approved attendance areas are rapidly moving toward actual school establishment via educational program development, agreements, building plans, and employment of personnel.

Seven approved attendance areas have drawn up agreements; and six have employed or are planning to employ administrators for work in the developmental stages. One of the six hopes to begin conducting classes in September of this year.

Active interest has been shown in more than two dozen other attendance areas throughout the State. It is likely that nearly all will receive approval at a later date. It is anticipated that several of these will proceed into the official establishment of schools, upon receipt of approval for the respective attendance areas.

Act 484, also passed by the 1963 Legislature, permits establishment of Community Colleges or Technical Institutes. Two have received approval for establishment and several other areas are showing interest.

PUERTO RICO

The demand for admission to both the regular preparatory and extension programs far exceeds the facilities available at the Institute. Twenty-three graduates received diplomas. Over 80 percent of them are employed as technicians at various levels which include production management, production control, product development, and supervisory management.

497 students applied for admission to the Institute. Of these, 378 reported for entrance examination. Of those who completed the examination, 194 were found to be acceptable. Due to lack facilities, only 78 new students were admitted to the two-year program.

PUERTO RICO (Cont'd)

The Evening Technical Institute of the College of Agriculture and Mechanics Arts in Mayaguez graduated 25.

For the school year 1964-65 consideration is being given to the expansion of the present physical facilities at the Technological Institute and the establishment of three additional courses in Industrial Chemistry, Electrical Technology and Electronic Data Processing.

RHODE ISLAND

The 1963 Legislature approved an $8 million bond issue for the construction of four regional vocational schools. This bond issue will be on the special election ballot for approval by the electorate on June 2, 1964, and $325,000 additional for the Vocational Technical School of Rhode Island.

$700,000 was appropriated during 1963 for the expansion of the Vocational-Technical School of Rhode Island.

Rhode Island Junior College was established March 4, 1964, and a President appointed. He is Dr. William F. Flanagan. Classes will begin in September, 1964 - appropriation $98,500. A study was completed to determine how vocational education in the State could best meet total community needs.

SOUTH CAROLINA

South Carolina is moving forward rapidly with a program designed to make vocational and technical education facilities available throughout the State. Nine Technical Education Centers have been approved by the State Committee for Technical Education and seven of these are in operation.

The State Legislature increased funds for technical education approximately 50 percent. The General Assembly passed an Act permitting the State Board of Education to borrow $150,000 to erect a new 50-room dormitory at the Columbia Branch of the Area Trade School. This building will be occupied in September 1964.

A similar building was completed at the Denmark Branch and was occupied in September 1963.

An area vocational school to serve high school students in four cooperating schools was organized and began operating in September 1963.

SOUTH DAKOTA

The recommendations resulting from a study, conducted by the South Dakota Employment Service and the Division of Vocational Education, are being reviewed by the Legislative Appropriations Committee. These recommendations provide additional funds for such area technical training schools as may be needed.

The State Advisory Committee under the State Board of Vocational Education is working to further develop the area school with the idea that its operation and development can be extended under the Vocational Education Act of 1963.

Presently technical programs are offered only in high schools in the State. Arrangements have been made for the establishment of a 13th year on a technical level in one high school.

The problem of establishing courses under Title VIII has been the lack of matching funds. Some industries have provided the necessary funds for such technical courses as have been offered.

TENNESSEE

The 1963 General Assembly enacted legislation and appropriated funds to establish area vocational and technical schools and regional technical schools in Tennessee. The General Assembly expressed its intent that a Statewide system of area vocational and technical schools be established so that ultimately one would be within commuting distance of all citizens of the State.

Eight area vocational and technical schools are under construction with two additional ones planned immediately. These ten schools are scheduled to be placed into operation by the end of fiscal 1965. One technical institute is being planned with construction to begin in August 1964.

Projected plans call for the establishment of 20 such schools and possibly three technical institutes.

TEXAS

Secondary schools in the larger cities are showing a growing interest in technical education programs. Several programs have been approved to begin in September, 1964.

Twenty-one junior colleges offered Title VIII technical programs during fiscal year 1963-64 with from 1 to 7 courses offered in each junior college. Most popular courses are data processing, technical drafting, and electronics. Twenty junior college instructors of data processing were approved to attend the 1964 summer institute in Fort Collins, Colorado.

A new junior college, Grayson County Junior College, Sherman-Denison area, is under construction. The first building to be completed is the technical wing to house the vocational and technical program. An extensive occupational survey was made of the area to guide the college in determining course offerings. Three other occupational surveys have been made for junior colleges and several others are scheduled. Del Mar College, Corpus Christi; Lee College, Baytown; San Antonio College, San Antonio; Panola Junior College, Carthage; and Henderson County Junior College, Athens; are planning to expand their physical facilities. Hill County Junior College at Hillsboro moved into a new plant in January of 1964.

Four senior colleges are presently offering technical programs. The electronics technology program at Texas A&M University was very successful and expansion of the program is being considered.

UTAH

Legislation passed for the 1963-65 biennium included $1,450,000 for buildings and equipment at Salt Lake Trade Technical Institute and $970,000 for maintenance and operation; and $855,000 for maintenance and operation at Utah Trade Technical Institute, Provo.

Salt Lake Trade Technical Institute will now have a new home about 5 miles from the business district of Salt Lake City. These improved facilities should add to the stature and improve the image of vocational education in the minds of young people with a resulting increase of enrollments in preparatory programs in trade, technical, and business training at this school.

UTAH (Cont'd)

Plans are now in the preliminary developmental stage to have an overall evaluation of Utah's vocational education program made in 1964. The details will be worked out during the 1963-64 school year, after which the State Board will be asked to approve the personnel of the committee.

Utah has two vocational and technical institutes: Salt Lake Trade Technical Institute in Salt Lake City and the Utah Trade Technical Institute in Provo. In addition, Weber College, Ogden, has an extensive vocational and technical program. Eighty percent of the State's population is within commuting distance to these three schools.

A data processing program has been initiated at Weber College in Ogden. This is the first such program in the State conducted at the vocational education level.

VERMONT

Vermont is in the process of building a number of new additions to present vocational education facilities. A new laboratory building has been completed at Vermont Technical College which has broadened the curriculum.

Burlington and Rutland have both enlarged the areas they will serve - Rutland as of September 1963 and Burlington as of September 1964. Hartford School District has also enlarged their area and are now building a new school.

VIRGINIA

The State Commission on Vocational Education appointed by Governor Harrison made recommendations to the Governor and the General Assembly. The recommendations included additional appropriations for Vocational Education and the establishment of a State Board of Technical Education.

The General Assembly of 1964 authorized a nine member State Board of Technical Education.

This Board has the responsibility of developing standards, curricula, establishment and operation of area vocational-technical schools and/or technical programs. Also, the Board of Technical Education will have the responsibility of establishing the number of graduates needed from full-time vocational and technical programs.

VIRGINIA (Cont'd)

The General Assembly appropriated $1 million for the next biennium to the State Board of Education for expansion of vocational education for high school youth, for clinics for guidance counselors, and for expanding and upgrading the present area vocational schools.

Two million dollars was appropriated for the next biennium to the Board of Technical Education for administrative expenses, teacher training, and curriculum development, needed surveys etc., and for establishing new schools or technical programs.

Two of the present area vocational-technical schools have employed architects to plan new buildings, and two other schools are hoping to start on a building program as soon as local funds can be secured.

Several centers in the State are making surveys or are developing plans for new area vocational schools. There is a possibility that three or four new area vocational technical schools will be open by September 1966.

Richmond Professional Institute has announced one new technology program to start in September of 1964.

State clinics for high school guidance counselors are planned by the State Board of Education for the summers of 1964 and 1965. The clinics are designed to acquaint the counselors with job qualifications, information needed in the selection of vocational objectives, the use of tests to develop the needed student profiles, description of vocational and technical program offerings in the State, and job opportunities to those completing the vocational and technical courses available.

WASHINGTON

Currently 25 schools that qualify as area vocational and technical schools offer post secondary vocational and technical education programs in Washington. Of this number, 10 are vocational and technical institutes or schools and 15 are community colleges. By action of the 1963 State Legislature, 2 new community colleges were authorized to begin operation in the present biennium and 2 others have been designated and will open in the 1965-66 fiscal year.

WASHINGTON (Cont'd)

Plans are in process for new plants or for major additions to present facilities which should be completed in 2 years at Green River Community College, Auburn; Bellevue School District No. 405, Bellevue; Olympic College, Bremerton; Everett Junior College, Everett; Columbia Basin College, Pasco; Bellingham Vocational-Technical School, Bellingham; Renton Vocational School, Renton; Edison Technical School, Seattle; Highline College, Seattle; Spokane Community College, Spokane; Clark College, Vancouver; Yakima Valley College, Yakima; and Tacoma Vocational-Technical Institute, Tacoma. The total value of these additional buildings will approximate $12 million.

Previous figures showed that the vocational-technical programs have doubled in the State in the past 10 years and they are expected to double again in the next 5 years. However, with the increased incentive and stimulation resulting from the Vocational Education Act of 1963, it is anticipated that growth of the programs will be accelerated.

WEST VIRGINIA

The 1963 State Legislature increased the State appropriation $60,000 over the previous year 1961-62 making a total of $410,000. The 1964 Session of the Legislature will deal primarily with budgets. No other legislation is contemplated.

During 1964, several counties will vote on bond issues to provide new vocational education facilities in their proposed building program.

On the basis of a survey of need for trained personnel in data processing in the industries in the Ohio Valley, a pilot program in data processing was started in the fall of 1963 at Magnolia High School, New Martinsville.

Three new preparatory programs were established: St. Albans High School, Chemical Technology; Parkersburg High School, Electronics Technology; and Huntington High School, Electronics Technology. Supplementary courses in Electronics Technology were offered in Beckley, Charleston, Huntington, Parkersburg, and Wheeling.

WISCONSIN

Because of Wisconsin's unique system of separate local schools of Vocational, Technical and Adult Education, the development of educational facilities is satisfactory. In local situations where facilities have become out-dated or over-crowded, local communities have responded to the need for up-dating laboratories and classrooms or have authorized building expansions. During the past year, several local schools have completed additions to their physical plants.

Improved program financing has resulted from increased State appropriations for Vocational-Technical Education.

Four additional schools have been approved to develop programs of an area post high school nature bringing the total of approved schools to twelve. Future expansion calls for a total of 20 area Vocational and Adult Schools. These schools offer all traditional vocational education programs, and in addition, grant an associate degree in various technologies.

Legislation has been enacted which gives the State Board of Vocational and Adult Education representation on the State coordinating Committee for Higher Education. This committee reviews the budgets and programs of all higher education including the associate degree programs in the vocational and adult schools.

The State Board approved the establishment of Business Data Processing programs at Appleton, Green Bay, Kenosha, Madison, Milwaukee and Wausau. Three of the centers have purchased equipment with Title VIII assistance and will be in full operation during fiscal year 1964.

WYOMING

The Wyoming Foundation Law and sections thereto concerning vocational education have been virtually unchanged since inception in 1955; however, the 1963 Legislature increased reimbursement for the Vocational Unit from $6,200 to $6,500. It is anticipated that State legislation will be proposed to the 1964 Legislature which will affect the cause of vocational education in Wyoming.

At the present there are no area or technical schools in the State; however, there has been encouraging talk and considerable interest shown.

Presently Casper College conducts reimbursable programs in distributive education, home economics education, trade and industrial education, practical nurse education and technical education.

Western Wyoming Junior College, a relatively new institution, has a distributive education program and a few adult programs in trade and industrial education.

On the whole the climate in Wyoming seems favorable toward new and greater expansion of vocational education.

DICKINSON COUNTY; IRON COUNTY; MICHIGAN

The emphasis on area vocational schools was culminated in this study of the vocational needs in Dickinson-Iron Area, Michigan. Advisory committees were appointed in the following occupations: agricultural, clerical, sales, services, health care, manufacturing, mechanics and repairs, building trades, graphic arts and printing, transportation, and utilities. Some objectives of the study were: (1) to study the feasibility of a cooperative twin-county vocational education program, (2) to find the most efficient use of existing facilities and personnel, (3) to learn basic educational needs for students at different levels and for entry level employment, (4) to establish a transfer program with post-secondary institutions offering approved technical education. Procedure included questionnaires and personal interview instruments for a population of grades 7 through 12, dropouts and graduates of secondary schools in 1961-1965, and currently employed and unemployed residents of the counties. Recommendations were: (1) the establishment of a position of vocational administrator, (2) vocational offerings be coordinated under one administrator, (3) an improved system of vocational guidance be established, (4) a cooperative work experience program be established, (5) post-high training offerings be utilized, and (6) duplication be eliminated in the various service areas. Some specific suggestions are included. (MS)

LADIES FOR MOTEL WORK WANTED—Apply in person to Sylvia Lindstrom, Mgr., HOLIDAY MOTEL, between 10 a.m. - 2 p.m.

AUTO MECHANICS
Experienced. For top Oldsmobile dealership. Plenty of work. Modern shop. All benefits.

☆ WELDERS
☆ DRILL PRESS
☆ TURRET LATHE

Secretaries
Stenos
Typists
Key Punch Operators

CARPENTERS
Steady work for union roughers and finishers; excellent working conditions.
781-6530 OR 242-0303

WANTED—Women to help in kitchen. No cooking. Start now till Oct. 30. Write—FORREST LODGE, Star Rt., Laid O' Lakes, Wis. Call Boulder Junction EVS-1500.

MACHINE OPERATORS
Grinders: Heald internal and Norton cylindrical; Cincinnati centerless; Cone automatic screw machine, turret lathe, drill presses.

AUTO BODY COMB. MAN
New building. Excellent position for aggressive man in growing shop. Average annual income, our men $12,000.

GRAPHIC ARTS
The Castle-Pierce Printing Co. Oshkosh is looking for men to the following positions:
Lithographic Stripper
journeyman 1 apprentice.
Combination Man
Linotype and hand composition (experienced); apprentice.
Bindery Folder Operator

DRAFTSMAN
LAYOUT

CARPENTERS
Union roughers: to work on all custom homes: steady work and good working conditions. 354-9162, after 5.
HERB G. SCHROEDER SONS, INC.

Grinder Operator
EXPERIENCED ON BLANCHARD: 55 hour week: benefits.
Midwest Grinding Corp.
7725 W. TOWER AV. 354-4440

Electricians

AUTO SCREW MACHINE
BROWN & SHARPE Operators and setup men, night shift: top pay. $3.85 per hour night shift. Plenty of overtime. Steady work. Company benefits.

INTRODUCTION

Man, from the dawn of time, has been concerned with providing the necessities of life, for himself and his family. The ancient pyramids of Egypt give mute testimony of highly developed skills and of master craftsmen in that ancient age. From that time, until the present, people the world over have been concerned with occupational training. Fathers passed their craft on to their sons, and trade secrets were jealously guarded by those who knew 'the tricks of the trade.'

In more modern times, however, the methods of occupational training that were adequate a century or longer ago will no longer suffice. Our modern economic society demands trained manpower in all walks of life and this demand will continue to grow at an ever increasing rate. If the United States, with only a small fraction of the world's population, is to continue in a position of world leadership, we simply cannot afford to have thousands of young persons out of school, and out of work, while thousands of jobs across the country go unfilled because persons lack the skills to meet the requirements of the job.

Advisors to former President Eisenhower and the late President Kennedy recognized the need and urged action on a broad front to meet the manpower challenge. As a result, the Congress passed several bills which called for vastly expanded training measures, hopefully, enough to meet the future needs.

The appointment of a distinguished panel of consultants, by the late President Kennedy, to study the needs of vocational education in the United States brought about the passage of the Vocational Education Act of 1963.

This much heralded piece of legislation has already brought about many changes in vocational and technical education, but its impact on the long range economic development of our country can only be forecast at the present. However, we feel, that this new law will help generate new thinking, and new programs in vocational and technical education and will also modernize some of the programs that have been in existence for many years.

If this society is to continue to function, and to expand, and to progress, we must find better ways of preparing the citizens, both young and old, to do the jobs this society demands. Former Secretary Mitchell stated;

> 'The jobs that will be available, then, are jobs requiring more extensive educational background; over all the educational requirements of jobs will be rising all across the board. Thus,

1. Mitchell, J.P. 'Educational Excellence: A new source of strength.' American Vocational Journal. 35: 24-26. January, 1960.

the successful operation of the economy will demand that the educational system produce qualified workers--that is, young men and women with some useful training in some field of knowledge or skill.'1

While great numbers of our high school students now enter college, the records indicate in the nation as a whole, that just 20 per cent of the youths entering grade school complete four years of college. This, of course, leaves millions that must earn a living without the benefits of a college education.

Thus, it seems apparent, that the educational system in the United States, while doing an excellent job in preparing students for higher education has not kept pace with the rapid technological changes in the vast areas of occupational training of less than college level.

A policy release by the National Association of Manufacturers states:

'First, and most apparent, is that Industry must look to Education for its supply of trained personnel. . . It is profitable from the standpoint of both Industry and society to equip them (young people) with education and training consistent with their desires. aptitudes, and abilities before they leave the full-time school and enter employment. Young people should have the kind of education which will prepare them adequately for their careers and their civic responsibilities. Industrialists and businessmen can help keep them in school longer, or keep many of them in school at least part-time, by cooperating with education in practical arts courses and vocational and technical courses which are given in the regular school program or as work-study programs.

Education and Industry must go farther than merely preparing individuals to enter employment. After people are employed it must be possible for them to work for promotion and advancement. Educators and industrialists, working together, should provide opportunities for continuing education...'2

---

2. Educational Advisory Committee and the Educational Advisory Council. This We Believe About Education. New York, N.Y., National Association of Manufacturers. 1958.

Organized labor also is concerned about the relationship between education and economic opportunity in the United States:

'Nations in the world today which are rich in natural resources but low in educational attainment are poor nations. On the other hand, nations such as Switzerland and Sweden, which are relatively low in the amount of their natural resources but high in their educational attainment, enjoy relatively high standards of living. A dramatic illustration is that of Israel and its neighbors. Israel, arid and poor in resources, but with less than 5% illiteracy, has an annual gross national product of $1,070 per capita. Many of its neighbors are much more richly endowed with resources, but Egypt, with 70% illiteracy, has a percapita gross national product of only $139; Jordan, 70% illiterate, $118; Saudi Arabia, 85% illiterate, $167; and Syria, 40% illiterate, $158; Lebanon, better off than most of its neighbors, produces $391 per capita and has an illiteracy rate of only 25%. There is, of course, no one single factor which accounts for economic growth but the conclusion is inescapable that Israel and Lebanon are more prosperous than their neighbors in considerable part because their populations are better educated.'

'A conspicuous case of our nation's schools failing to measure up to the needs of the times is vocational education. Our rapidly changing technology has created an increasing demand for a trained labor force. The need for unskilled workers is rapidly shrinking and the job opportunities of the future will be in occupations which require more education and better training. In addition, old skills often become obsolete and new skills must undergo constant training and retraining during their whole working life.'

'Schools must be sufficiently flexible institutions to prepare a variety of students with a variety of needs and interest for their future role in society. Young people looking forward to higher education must be able to study those subjects which will prepare them adequately for their future work in the colleges and universities. Those young people who do not look forward to higher education must be able to learn in their schools vocational skills which are realistically related to the needs of modern industry. Schools must treat skilled workmanship as something as worthy of our best young people as is pre-professional training. During their school years all students should explore the meaning of citizenship in democratic society.'3

---

3. Policy Resolution, 1963 convention A.F.L.-C.I.O. Publication No. 127. Labor Looks At Education.

Training for occupational competency has had many champions in years gone by. Men of vision such as Former Governor Ferris and William H. Dunwoody realized the value of a trained, competent work force around the turn of the century, and they established the outstanding institutions that bear their names today. Men of vision in Government also recognized the need, and many of the Land Grant Colleges were established as 'Agricultural and Mechanical' institutions and some still have this as their official name: Texas A and M for example. The passage of the Smith - Hughes Vocational Act of 1917 did much to establish occupational training as a vital part of American education and it paved the way for some of the early 'Area' schools in the United States. Since 1917, education has undergone many changes. Students have more and more knowledge to grasp and institutions have increased the curriculum drastically. But most of us agree, that changes and improvements are now coming at an ever increasing rate. At the present time, we are in the beginning of what some experts call the 'Knowledge Explosion' or, in other words, a snow balling effect of educational and scientific data. The effect of the new knowledge will be to change the lives of all Americans no matter how remote they may be from the big city life. It is the duty of all Public Institutions, to help the citizens acquire the knowledge and skills necessary to lead a good life in this fast changing world.

The possibilities of a coordinated plan for vocational education in this area of Michigan began with the passage of the Vocational Education Act of 1963. One of the important features of this new law was the emphasis on the 'Area' Vocational School. Sponsors of the legislation realized that high costs and small enrollments would prevent broad vocational programs in many areas of the country without cooperation between various schools and districts. Mr. Edward 'Ted' Sell, formerly of the Public Services Division, Northern Michigan University, in cooperation with the five superintendents of schools in Dickinson County, was instrumental in preparing and sending a proposal for an area vocational study to the Division of Vocational Education, in Lansing. After due consideration of present student and adult population, and student population trends in the future, plus the finances necessary for vocational programs, and other factors, the Division of Vocational Education rejected the original proposal, and requested that the original study be enlarged in scope to include Dickinson and Iron Counties. Several months later another meeting was held and included superintendents from all of the ten high schools in the two counties. (Channing and Felch have since consolidated). It was agreed to submit another proposal for a vocational study that would include Dickinson and Iron Counties. The new proposal was accepted by the Division of Vocational Education and the Area Study Coordinators began meeting in October, 1965.

The funding of the study was quickly agreed upon by all ten high school districts and the Division of Vocational Education, and the coordinators began the task of assembling the citizens advisory committee.

We feel that since the first meeting, many excellent ideas have been voiced by various advisory committee members. The study coordinators hope that many of the recommendations can be put into effect in the future, this, of course, will be determined by the various boards of education and the Division of Vocational Education.

Organization Chart for The Dickinson-Iron Area Vocational-Technical Education Study

CITIZENS ADVISORY COMMITTEE

AGRICULTURAL OCCUPATIONS

Frank Molinare	Court House	Iron Mountain, Mich.

DICKINSON-IRON AREA
VOCATIONAL EDUCATION STUDY

January 15, 1966

Dear Sir:

The ten high schools of Dickinson and Iron Counties have joined together to study the occupational training needs of high school students, school drop outs and adults who need training or retraining for an occupation.

As you know many of the high school graduates of today do not have a skill with which to earn a living. As a result, many young persons and unskilled adults are unemployed, even though many industries are seeking persons with skills.

The Congress of the United States has studied this problem and as a result The Vocational Education Act of 1963 was passed.

This law allocates funds to the states who in turn pass these funds on to schools who develop programs.

The Department of Education, Vocational Education Division, Lansing is busy making plans for a statewide system of Vocational and Technical Education, (training for any job of less than college degree requirements).

The ten high schools in Dickinson and Iron Counties have been designated as one area for the study.

Persons from these two counties are to be chosen to serve on a Citizens Advisory Committee to study the problem, and to make recommendations for improvement of Vocational Education in the two county area.

The following general areas will be examined and we hope to have a sub committee for each:

A. Clerical occupations
B. Sales occupations
C. Graphic arts and printing occupations
D. Service occupations
E. Manufacturing occupations
F. Mechanics and repairmen occupations
G. Building trades occupations
H. Agricultural occupations
I. Utilities occupations
J. Transportation occupations
K. Health care occupations

The recommendations by these committees will help to determine Vocational and Technical Education in this part of Michigan for many years to come, therefore it is important that well qualified persons be on the Citizens Committee.

You have been nominated to the committee, and we hope you will want to help plan a good Vocational and Technical Program for students and adults who want occupational training.

The first meeting will be held on February 2, 1966 at seven o'clock C.S.T. in the new Kingsford High School lunch room.

Dr. Claud Bosworth of Northern Michigan University will be the main speaker for the first meeting, later meetings will be held in other high schools throughout the two county area.

Dr. Bosworth has had wide experience and is well qualified to serve as a consultant to the study group.

Please return the enclosed card indicating whether you are willing to serve on the committee.

If you have any questions please call any of the study committee advisors listed below:

Mr. Laurence Varda, Chairman-Kingsford High School
Mr. Don Boulanger, Crystal Falls High School
Mr. Douglas Villa, Iron Mountain High School
Mr. Tom Karjala, Iron River High School
Mr.Emil Leppiaho, Norway-Vulcan High School

Sincerely,

Dickinson-Iron Area
Vocational Education Study Committee

TITLE OF PROJECT

Cooperative Research Study of the Vocational Education Needs of the Dickinson-Iron County Area. (Kingsford, Iron Mountain, Norway-Vulcan, Felch, Channing, Iron River, Stambaugh, Crystal Falls, Alpha, and Amasa High Schools.)

THE PROBLEM

The basic problem is the inability of any one of the smaller high schools to provide a sufficiently adequate comprehensive vocational education program to meet the needs of in-school youth and out-of-school youth and adults because of the following special circumstances:

1. Insufficient enrollment to justify a variety of course offerings in any one school.

2. Fiscal inability of any one school district to support a total program.

3. Inadequate utilization of existing facilities and staff.

4. The twin county study area has a population of 41,000 people dispersed over approximately 1682 square miles. The school population of 10,681 students includes 1,085 parochial and 493 enrolled in K-8 districts. The combined taxable state equalized evaluation of the area is $118,646,322.00. Services of a community college are not available to the area. State equalized evaluation and student membership by district are:

District	S. E. V.	Membership (1964)
Breitung	19,943,915	1994
Iron Mountain	20,188,470	1589
Iron River	25,851,864	1326
Norway-Vulcan	9,379,250	1266
Stambaugh	13,864,202	1258
Crystal Falls	13,323,299	935
Channing	1,830,161	269
Felch	1,974,121	181
Alpha	6,244,374	165
Amasa	1,110,076	120
*Bates	4,096,732	380
*Breen	739,918	113
Parochial Schools		1085
	118,646,322	10,681

* K-8 grade school system.

The purpose of the study, therefore, is to find an approach whereby a sufficiently broad vocational education program, realistic to the general and specific needs of the in-school and out-of-school youth and adults of the Dickinson-Iron County area can be made available.

OBJECTIVES

A. To determine the feasibility of a cooperative twin county vocational education program.

B. To determine how to make the most efficient use of existing facilities, equipment and personnel, and to determine additional needs for the same.

C. To determine the basic vocational education needs for: The job-entry needs of those in the local area, the job-entry needs of the great number leaving the area, the drop-out students, area trade extension needs, training and retraining of the unemployed and underemployed, the socio-economically handicapped, and those destined for post-high school vocational programs.

D. To establish a logical, well defined sequential transfer program with post-secondary institutions offering approved technical education programs.

E. Provided that a twin-county vocational program is found feasible, to determine the best administrative, supervisory, and financial structure by which the program can be made successful.

F. To make available, upon request, the results of this study to interested persons or organizations as a contribution to overall efforts of our state and nation to develop a program to better utilize our manpower potential and to raise the standard of living of all persons of all communities.

PROCEDURE

A. General Method or Design.

1. Population groups to be surveyed.
   a. In school - junior high 7 - 8 - 9.
      senior high 10 - 11 - 12.
   b. Drop-outs from secondary schools 1961-1965.
   c. Graduates 1961-1965.
   d. Currently employed residents of the county.
   e. Unemployed.

2. Types of data.

   Group (1) Junior high and high school.
   Occupational interests.
   Results of aptitude testing.
   Mental maturity - verbal and non-verbal.
   Occupational counseling available.

   Group (2) Drop-outs.
   Reason for dropping out.
   Attitude toward school.
   Present employment.
   Vocational guidance in school.
   Training needed (as they see it).

Group (3) Graduates 1961-1965.
Educational level attained.
Terminal program?
College drop-out?
Present employment.
Attitude toward school.
Vocational guidance in school.
Geographic distribution.
Problems encountered when seeking employment.
Training needed (as they see it).

Group (4) The currently employed.
Update the data of the Iron County area, school study.
Survey of Training Needs 1961-1966. M.E.S.C. to identify jobs available and the projected employment opportunities locally, so as to be better trained people to match jobs.

Group (5) The unemployed.
Survey of registrations of the unemployed with the M.E.S.C. to determine skills possessed by the unemployed.

2. Procedure, method, and organization.

Questionnaires, personal interviews, analysis of data collected by schools and local and state agencies. The in-school population will be polled by the individual local schools. Out-of-school population will be polled by the survey staff. Additionally, the survey staff will work jointly with local and state agencies in up-dating data contained in existing studies and surveys.

B. Methods of analysis.

1. Questionnaires and personal interview instruments will be developed such that they contain information in keeping with the objectives of the survey.

2. Information obtained by tabulation of results of instruments will be used as a basis for drawing conclusions from which recommendations can be made to the cooperating school districts.

C. Copies of the project outcomes will be distributed to superintendents, of the cooperating schools and boards of education, principals, vocational teachers and copies will be made available to teacher-training institutions, businesses and industries, local, state, and national agencies, and state departments of public instruction upon request.

DICKINSON COUNTY

The population growth or loss, is watched with concern in the many areas of the country that are undergoing drastic changes in population. The term 'population explosion' is widely used in describing the tremendous increases in population around the globe. Not only does an increase in population usually mean an increase in business and industry, but in the United States, it means an increase in Federal funds for those programs whose funds are allocated on the basis of population.

Interest in population reaches a high tide decimally with the federal census. From the census we find that there is a constant redistribution of people. For example, there has been increasing concentration in urban and suburban areas. Further in Michigan, there has been a gradual redistribution of population for many decades, and though there has been a gradual increase in the population of the state, each decade shows that many counties have actually shown decreases. The Upper Peninsula is a case in point.

Census data show that Menominee, Houghton, and Keweenaw reached their peak of population by 1910 while eight other U.P. counties reached their peak over the next four decades--Dickinson reached its peak in 1930. Eleven of the 15 counties in the U.P. and 15 of the 68 in Lower Michigan, mostly in the northern part, presently have fewer people than formerly.

1. <u>County Population</u>

The table below shows population changes in Dickinson County since 1900:

1900	17,890
1910	20,524
1920	19,456
1930	29,941
1940	28,731
1950	24,844
1960	23,917

One can readily see that the largest increase occurred in the decade 1920 to 1930 when the Ford Motor Company located in the county. This resulted in the immigration of thousands of people.

There are three cities and seven townships in the county. The tables below show their population characteristic from 1930 on:

Cities	1930	1940	1950	1960
Iron Mountain	11,652	11,080	9,679	9,299
Kingsford	5,526	5,771	5,038	5,084
Norway	4,016	3,778	3,258	3,171

Townships	1930	1940	1950	1960
Breen	461	825	584	492
Breitung	9,175	8,708	2,739	2,860
Felch	771	848	678	509
Norway	1,453	1,272	1,102	1,027
Sagola	1,604	1,562	1,184	952
Waucedah	670	583	497	475
West Branch	139	126	85	53

Population Increase (or Decrease) Dickinson County

	Number	Percent
1900-1910	2,634	14.7
1910-1920	-1,068	-5.2
1920-1930	10,485	53.9
1930-1940	-1,210	-4.0
1940-1950	-3,887	-13.5
1950-1960	- 927	-3.7

Components of Population Change in Dickinson County

1940-1950	Population Change	-3,711
	Natural Increase	2,920
	Net Migration	-6,631
1950-1960	Population Change	- 927
	Natural Increase	2,532
	Net Migration	-3,459

2. City Population

Iron Mountain, 1960: 9,299

In the year 1960, 9.4% of the residents were foreign born; 35.5% were native of foreign or mixed parentage. Of the persons 25 years old and over, the median school years completed was 11.3; the percentage who completed four years of high school or more was 45.7. The non-worker labor force was 1.59. (This is the ratio of persons not in the labor force, includes children under 14, to the labor force.) Females 14 years old or over percentage in labor force was 33.8; the percentage of the civilian labor force unemployed was 6.2. Of the employed persons, the percentage in manufacturing industries was 22.2. The families median income (dollars) was $4,966. The percentage of families having under $3,000 incomes was 23.2; 8 percent of the families received $10,000 annual incomes or over.

Kingsford, 1960: 5,084

In the year 1960, 5.7% of the residents were foreign born; 25.7% were native of foreign born or mixed parentage. Of the persons 25 years old or older the median school years completed was 10.8; the percentage who completed four years of high school or more was 41.2; the non-worker ratio was 1.91; females 14 years old or over percentage in labor force was 28.8. The percentage of civilian labor force unemployed was 9.7; the percentage employed in manufacturing industries was 30.7. The family median income (dollars) was $5,088. The percentage of families having under $3,000 incomes was 24.2. Six percent of the families received $10,000 or more annual income.

Norway, 1960: 3, 171

In the year 1960, 10% of the residents were foreign born; 36.5% native of foreign or mixed parentage; persons 25 years old or over had a median school years of 10.2; those who completed high school of four years or more was 40.3%. The non-worker ratio was 1.69%; females 14 years old and over percentage of labor force was 30.8%. The civilian labor force unemployed was 10.2%; employed persons in manufacturing industries was 38.9%; family median incomes (dollars) was $4,728; 26.4% of the families received less than $3,000; 4.8% over $10,000.

The following are three separate projections of the population of Dickinson County in 1970:

Projection A

The population projection to 1970 for this county based upon the natural increase and migration trends since 1940 follow:

Population, 1960	Natural Increase	Migration	Projected Population, 1970
23,917	2,437	-2,500	23,850

Projection B

This is the second projection of the population of Michigan in 1970. It is based on the ratio method and in the assumption that: 1) the total population of Michigan in 1970 will be 9.6 million. 2) the population of each county would be a certain percentage of the 9.6 million, the percentage to be based on a continuation of the ratio trend from 1940 to 1960. If a county had a smaller percentage of the state's population in 1960 than in 1940, it was assumed to be still smaller in 1970; if the population was larger, the percentage would be still larger in 1970.

Percentage of Michigan Population
in Dickinson County

1940	.5423
1950	.3899
1960	.3057
Projected 1970	.1874
Projected population, 1970	17,990

Should Michigan's population be less than 9.6 million in 1970, then the projected 1970 figures of each county produced by the ratio method, Projection B, will likewise be less. On the other hand, the figures will be higher for each county if the state population is more than 9.6 million.

Projection C
Rate of Growth Same As 1950-60

Population Projection C contains projections in population of the counties to 1970 and a recapitulation of the two projections already used. Projection C is based upon the assumption that the population of each county will continue to grow at the same rate as it did during the 1950-60 decade. On this basis, the fast-growing counties will continue to grow fast and slow-growing counties will continue to grow slowly. The declining counties will continue to decline.

Dickinson County

1960	A	B	C	% Range
23,917	23,850	17,990	23,030	33%

Population - 65 years old and over, Dickinson County

1940-1,719 1950-2,219 1960-3,235

Increase in Population 65 Years and Over

1940-50 - 500 1950-60 - 1,016

It is estimated that in 1970, 14.7 - 15.2% of all the people in Dickinson County will be age 65 or over.

Social and Economic Characteristics - 1960

Subject	Iron Mountain	Kings-ford	Norway	Rural Farm
Nativity - Foreign Born	8.4%	5.7%	10%	6%
Foreign or Mixed Parentage	35.5	25.7	36.5	36.7
Median School Yr. Completed	11.3	10.8	10.2	8.7
Completed High School	45.7	41.2	40.3	14.9
Non-Worker Labor Force	1.59	1.91	1.69	36.4
Females 14 & over in Labor Force	33.8	28.8	40.3	6
Percent of Labor Force Unemployed	6.2	9.7	10.2	30.3
Percent Employed in Manufacturing Industries	22.2	30.7	38.9	4.2
Family-Median Income	$4,966	$5,088	$4,728	$3,700
Percent Families Under $3,000 year	23.2	24.2	26.4	33
Families Over $10,000 Year	8	6	4.8	4.8

The estimated migration for Dickinson County from 1950-60 shows that there was a net out-migration in the earlier age groups up to 19 years of age. There was a net male in-migration in the 55 and over age groups. The female trend is the same as the male except that there is no in-migration in the older age groups except in the 55-59 age group.

B. Labor Force

	September, 1961	September, 1962	April, 1963
Total Labor Force	8,170	8,100	7,500
Agricultural Employment	400	200	200
Non-Farm	7,770	7,900	7,300
Unemployment	800	780	1,300
Totan Non-Farm Employment	6,970	7,110	6,000
Self Employment	700	700	700
Wage & Salary Workers	6,270	6,400	5,300
Manufacturing	1,810	1,860	1,120
Non-durable Goods Industry	600	520	310
Construction	400	560	380
Transport, Communications & Utilities	520	550	520
Wholesale Trade	240	260	220
Retail Trade	1,200	1,200	900
Finance, Real Estate and Insurance	130	110	120
Service	600	440	430
Mining	180	200	290
Government	1,200	1,220	1,320

SOURCE: MESC April, 1963

Total Number in Labor Force and Unemployment Expressed in Percent

	1940	1950	1961	1962	1963	1966
Labor Force	8,000	8,000	8,150	8,100	7,500	7,625
Unemployment	17%	14%	10%	9.6%	17.3%	8.5%

Factors Contributing to Economic Decline

Mining, lumber and automobile and station wagon manufacturing large segments of population. The closing of the General Controls Corporation is another factor for economic decline in the county.

Below is a table showing the change in the number of jobs.

	1940	1950	1962
Mining	400	70	200
Lumber	440	1,150	300
Auto & Station Wagon Manufacturing	320	900	0

Labor Force Projection - 1970

It is difficult to project labor force figures to 1970. There is no indication that there is going to be an increase in the total population. There are indications that there may be a decrease in the total population. If this is true, the labor force in 1970 might well be 7,000-8,000. 1960 - 8,444. It might be added, also, that the M.E.S.C. no longer considers the 400 workers who reside in this county but who are employed at the Kimberly Clark Mill at Niagara, Wisconsin, as a part of the County Labor Force.

Projection of Working Age Population - 1970

A projection of working-age population in 1970 using a survival rate and not taking into account in or out migration indicates that there will be a decrease of approximately 3,000 from 21,995 to 19,185. If out migration continues at its present rate, the total for 1970 would be considerably lower.

IRON COUNTY

1960 County Census 17,184

State Equalized Value - $64,590,487

This county was set off in 1885 from Marquette and Menominee Counties. Iron Ore deposits which gave the new county its name were the first on the Menominee Iron Range to be discovered. Shipping of ores began in 1882 when the railroad came in. Iron River was the first county seat, but in 1889, after a celebrated struggle, the government was shifted to Crystal Falls. Logging, which began in 1875, has been second only to mining in Iron County's economy.

Iron County has approximately 2,105 natural lakes covering more than 15,240 acres. In addition to this, there are seven hydroelectric water reservoirs covering 9,166 acres and 902 miles of streams.

Local Assessed - - $232,062

State Equalized - - $583,641

Iron County Employment Outlook

Employment in most all industries in Iron County remained constant during the winter period ending February 15, according to a report by the Michigan Security Commission.

The only exception was for piece-cutters who were laid off to enable the skidding crews to get all pulp and logs out of the woods before the spring breakup. Unemployment totaled 575 for the period.

In comparison, other areas of the Upper Peninsula had an increase in unemployment as a whole, mostly due to unfavorable weather conditions.

Total claims for unemployment compensation in the Upper Peninsula fluctuated sharply during the January 6, to March 10, period. After reaching a peak of 5,837 during the week ending February 3, claims subsequently declined to 5,013 in the reporting week ending March 10. By early March the claims totals were down to an average of around 5,200. During the corresponding period last year, a high of 6,041 was registered and in early March there were still over 5,800 claims.

The average hourly earnings in the various fields of industry during February were food, $2.35; basic lumber products, $1.95; paper, $2.93; printing and publishing, $2.23; non-electrical machinery, $2.65; and metal mining, $3.23.

Occupational Courses available at Norway High School

High School Level:

The Norway High School offers two occupational courses in the high school, made possible under the 1963 Vocational Act.

The courses are offered on a two-hour block time during the regular school day. The courses are Stenography and Combination Welder. These courses are offered at the eleventh and twelveth grade level. They also comply with the state recommendation.

Evening Adult Level Program in Norway

Norway High School provides an occupational training course in the occupation of combination welder. The course has been designed to provide the individual with job-entry skills, retraining and for up-grading his skill as a welder.

The total length of this course consists of 180 hours of training in Shielded Metal Arc Welding and Oxy-Acetylene Welding.

Vocational Educational Study

January 6, 1966

Dear Former Student:

In 1961 the late President John F. Kennedy asked for a study of vocational and technical education in the United States. This study was completed in 1962 and it disclosed that vocation and technical education needed to be expanded greatly if our country wanted to keep its position of leadership in the world.

The Congress of the United States responded to the challenge and passed The Vocational Education Act of 1963.

Since that time, schools all over the United States have started making plans to improve all areas of vocational education for those persons who desire to enter employment after formal schooling ends. For some this may mean after the eighth or ninth grade. Many others however, will graduate from high school, and should have some job skill to offer a potential employer upon graduation. Adults also need retraining in new skills as automation displaces more persons from jobs.

The ten high schools in the counties of Iron and Dickinson have joined together to make a study of the vocational and technical education needs of the young people of this area.

Part of the study includes getting information about how recent graduates and those that left before graduation have fared in the world of work.

We hope you will assist us in determining what type of classes should be offered in the high schools. Please fill out the enclosed form and mail as soon as possible, we need your cooperation to make the study a success. Your answers will be strictly confidential so please be frank. Thank you.

Unemployed graduates living in area.....	44

2-b. What do you do?
Following are jobs held by a random sample of the high school graduates:

Sales Persons	17	Print Shop	2
Stenographers	34	Farming	2
Medical Occupations & Lab. Assistants	53	Sheet Metal Worker	1
Waitress	6	Butcher	3
Telephone Operators	8	Pulp Worker	1
Governess-Mothers helper	4	Fireman	1
Beautician	11	Custodian	1
Electrical Workers	5	Conservation Dept.	2
Mechanics	18	Soil Density Tester	1
Carpenters, Bricklayers Construction	8	Barber	1
Draftsmen	8	General Sales	4
Welders	8	Mortician	1
Machine Operators	29	Dry-wall Taper	2
		Truck Driver	3
		Railroad Worker (brakeman-switchman)	2

History of employment:

3. What subjects that you took in high school helped you get a job?
Classes that helped graduates get a job:

Business and Office		Industrial Arts	
Shorthand	104	Machine Shop	18
Typing	131	Metal Working-	9
Business	8	Industrial Arts	10
Bookkeeping	57	Woodworking	11
Office Practice	11	Drafting	40
Accounting	4	Welding	12
Home Economics	17		

Other High School Subjects:

Science	21	Geometry	4
Chemistry	20	Algebra & Math.	134
Speech	17	English	109
Biology	12	Physiology	3
Foreign Language	4	Physics	16
Band	4	Sociology	4
History & Gov't.	6		

4. Did anyone help you with plans for your future while you were still in high school?

Yes 598 No 311

5-a. Guidance Counselor 443
Principal 83
Instructor 80

5-b. Do you think schools should give more help to students in planning for their future occupations?

Yes 775 No 44

6. If your answer to # 5 was yes, tell us what kinds of help would have been needed:

243 Job Information
169 Selecting High School Subjects
398 Others

7. Do you think the schools should do more and better training for occupations and skills?

Yes 610 No 67 287 Did not respond

8. What were some things that bothered you when you were applying for a job?

84	Filling applications	326	No job in home town
242	Inadequate training	271	Not enough pay
82	Did not want to move		

Other things which bothered them:

1. Military obligation
2. Non-experienced
3. No college education
4. Job interview
5. Lack of confidence
6. No summer jobs available
7. Limited advancement
8. Expected to know salary

9. If you could go back to school, what subject would you take that would help you advance in your present occupation?

Business & Office		Trade & Industry	
149	Typing	114	Machine Shop
114	Shorthand	105	Welding
150	Office Machines	87	Auto Mechanics
93	Filing	129	Electronics
145	Bookkeeping	118	Electricity
313	Mathematics	34	Carpentry
245	English	32	Graphic Arts (Printing)
67	History	120	Drafting

Other suggested subjects:

1. More agricultural training
2. Woodworking
3. Handicrafts
4. Sciences
5. Basic drawing
6. Philosophy
7. Automobile repair
8. Accounting
9. Business Law
10. Blueprint Reading
11. Chemistry
12. More physics
13. Industrial Courses
14. Speech
15. Advanced Biology
16. Economics
17. Offer courses in I.B.M.

Courses Graduates Think Should be Offered

Graduates of High Schools in Dickinson and Iron Counties

Dickinson - Iron

School Dropout Tabulation

1961 - 1965

The number of students that left high school before graduation was 268 in the two county area between the years 1961-1965. The total number of graduates for the two counties for the same years was 3,017. While the dropout rate may not be as high as it is in the Metropolitan areas, we believe it still is much too high and represents a loss of manpower to this area and to the nation as a whole.

The reasons for leaving school vary, of course, with the individual but many indicated by their responses that they were interested in some trade or occupation that, for the most part, was not available to them. Since leaving school the majority of them have also left the area and have had to "pick up" a skill or work at an unskilled occupation. We recommend a further local study in depth of the dropout and we also recommend at least one experimental project in the two counties dealing with dropouts and potential dropouts (habitual truants and others.)

We fully realize that the chances of great success in such a project would probably be small by other standards, but we feel any success in this endeavour would make the effort worthwhile, and we may be able to contribute to the overall understanding of dropouts and how to prevent them. We suggest an Upper Peninsula wide study of school dropouts, with coordination of effort by Northern Michigan University's Public Services Division in order to better establish what early danger signs exist and to suggest methods of alleviating the causes.

Dickinson-Iron Area
Vocational Education Study

Dear Former Student:

Will you help us plan a high school program that will help boys and girls get a job? To do this, will you tell us what you would like to have taken in high school had it been offered?

Here are some jobs. Put a mark after any you would have selected.

QUESTIONNAIRE
DICKINSON - IRON AREA
VOCATIONAL EDUCATION STUDY

1. Do you favor more and better occupational education in Iron and Dickinson Counties? Yes 74 No 1

2. Do you favor operation of basic introductory (Industrial Arts-General Business, etc.) programs in all schools and offering advanced programs on the area basis? Yes 70 No 2

3.a. Dickinson and Iron Counties are now combined for the following purposes: Mental Health, Intermediate School Districts, Administration of office of Economic Opportunity Programs;

3.b. Do you consider Dickinson and Iron as a logical solution to the problems of small school populations and valuations when considering vocational education in this area? Yes 57 No 9

4. Do you favor establishing vocational classes on an organized, two county wide system (same programs in each county, other more expensive classes in only one location)? Yes 57 No 9

5. If you are an employer, are there sufficient trained people in the area to meet your needs? Yes 5 No 51

6. Do the occupations you deal with require occupational training? Yes 65 No 6

7. What is the age level preferred in your trade or occupation? Please circle

18-25 18 25-35 41 35-50 23 50 over 4

8. In your occupational area are there shortages in trained persons? Yes 59 No 5

9. We have employed a number of young non-high-school graduates, but find they need a considerable amount of additional education and/or training before they can perform satisfactorily. Yes 35 No 14

10. Most young high school graduates who apply seem reasonably well prepared for entry employment, and we have employed them as openings have occurred. Yes 22 No 28

11. We have employed a number of young high school graduates but find they need a considerable amount of additional education and training before they can perform satisfactorily. Yes 38 No 12

12. We have found it inadvisable to employ young high school graduates, except for unskilled jobs. Yes 29 No 17

13. The nature of most of the entry jobs in our firm is such that young high school graduates are virtually unemployable, because of a lack of occupational training. Yes 27 No 20

14. To what extent do existing education facilities in the Dickinson-Iron Area meet the occupational and training needs of your company or firm?

2 (1) Very Well 29 (2) Fairly Well 27 (3) Poorly

15. If you think occupational education and training in the area need improvement, which of the following developments would you support?

19 (1) Substantial expansion of vocational education programs in the existing high schools.

51 (2) Creation of an area vocational school for secondary (High School) occupational training, and adult training and retraining.

16. Is there a formally organized training program in your company or firm? Yes 21 No 40

17. If "yes" check each type of program you now operate on a formal basis:

15 (1) Apprenticeship

11 (2) Supervision

12 (3) Technician

Please add any comments below:

MECHANICS AND REPAIRMEN
RECOMMENDATIONS

1. The group believes that there are many opportunities for young people in occupations of this type, some locally, and many more outside the area.

   It was felt that the security of the occupation of Mechanics was good, his wages would depend upon his own ability.

Outlook for employment is good in Welding

1. Welders are needed for the more advanced machinery that is coming about.

2. There is a great need for skilled labor in all of the mechanics and repairmen occupations.

3. One advanced welding program on a post high school level should be offered in the area.

4. Better pre-occupational training should be done on a high school level.

5. An eight week pilot program should be set up on an area basis during this summer for welding.

6. There is great need for more mechanics
   a. Teach basic fundamentals in schools
   b. Employment wise--experience and good training is necessary.

7. Auto mechanics and Auto Repair should be offered if there is attentive enrollment.

Coordination between areas and schools is important.

2. In the area of mechanics, it was felt that all people entering the occupation should have the following:

   a. The ability to meet and greet the public.
   b. The ability to read and write effectively.
   c. Know standard fastening procedures.
   d. Be able to measure with rules and micrometers.
   e. Use drills, taps, and dies.
   f. Be able to make simple math calculations (fraction, decimals).
   g. Use basic hand tools correctly.
   h. Know simple operation of the lathe and its cutting tools.
   i. Be able to do basic arc and gas welding.
   j. Have basic knowledge on internal combustion engine operation.
   k. Have a basic knowledge of pumps and simple hydraulics.

3. In the area of repairmen, it was felt there were certain basics which pertain to all the many branches of this trade.
   1. They should all have a good course in basic electricity.
   2. They should know the basic symbols and use schematics.
   3. They should be very familiar in the use of voltmeters, ammeters, and ohmmeters in the area of trouble shooting.
   4. They should be neat and be able to meet the public.
   5. They should have a good practical math background.
   6. They should have a knowledge of basic refrigeration.

4. In the discussion, it was felt that Blueprint Reading and Mechanical Drawing are basic and should be required of all entering the technical world of work. It was suggested that a course in General Mechanics be also a basic prerequisite. This would cover such areas as:

   1. Basic Electricity
   2. Power Transmission
   3. Fluid Power
   4. Properties of materials
   5. Blueprint Reading
   6. General Math
   7. Principles of machine shop

Recommendations for Building Trades Occupations

Under the building trades occupation listing, the advisory group felt that the following occupations should be offered:

Brick Layer and Mason
Carpenter
Industrial Electrician
Plumber and Pipe Fitter
Sheet Metal Worker
Tile Setter

It seemed to be the consensus of all, that Blueprint Reading is very necessary, especially the use of symbols and use of scale. This is especially important in Foreman Training. The group seemed to feel that present union practices in periods of Apprenticeship which allow the Apprentice only a very narrow work experience, because of overlapping of trades, does the Apprentice an injustice because although he gets his Journeyman Card, his background is limited. They felt possibly some of this shortcoming could be overcome through a specialized period of schooling outside the job.

In most of the jobs listed above, the groups seemed to feel that one place of training within the two counties would be sufficient for the number of trainees they hope to get, from ten to fifteen in each. The length of training should be for ½ day periods over a two year time. It was felt that this was sufficient to allow job entrance, and in most cases, this training, possibly offered in the Junior and Senior years of high school, would upon mutual agreement of union and contractors, reduce the total apprenticeship time.

It was felt by the group that this vocational program should be offered not only to those in Dickinson and Iron County, but also to those in neighboring Wisconsin who desire training, this, because of the geographical factors.

It was pointed out by the group, that the jobs listed above are skill trades, and require intelligent people for job entry. They felt that something should be done to attract intelligent young people for these positions which in most cases, pay more than some college graduates receive.

It was recommended that civil and highway surveyers would best be trained on a regional basis at a higher education facility because of the needs and accreditation involved.

Forestry and Agricultural Occupations

Findings:

Thirty-eight students in grades 7, 8, and 9 indicated interest in agricultural and forestry occupations.

Twenty-four students in grades 10, 11, 12 indicated interest in agricultural and forestry occupations.

Of a total labor force in the two-county area of over 12,000, only 290 are employed in agriculture.

The Advisory Committee agreed that there was little need for vocational training programs in agriculture.

The Advisory Committee indicated a need for programs beneficial to the small, rural business people engaged in farming, logging and others. Specific interest was shown in: Business Practices, Welding, Electricity, Machinery Repair and Operation, Heavy Equipment Operation and General Repair.

Recommendations:

That no new agricultural programs be initiated in the vocational study area. (Felch has a Vo-AG class at present).

That people engaged in rural occupations be encouraged to enroll in courses to be offered in Business, Welding, Machinery Operation and Repair, and others. It is further recommended that these and other courses be, at least in part, designed to fit the needs of the small operator.

That a wide variety of short training programs be initiated to up-grade the skills of those now working and to give younger men needed experience in areas such as; soils, land surveying, wild life and water management, chain saw operation and repair, carpentry, masonry, etc.

FORESTRY AND AGRICULTURAL OCCUPATIONS

Sub Committee Recommendations - Continued

It was felt that all small operators, loggers, farmers, needed a basic type of program in book and record keeping. This is especially true if they employ people and must keep this type of record.

In the areas of training to be covered in this occupation, it was felt that in addition to basic welding and automotive electricty, that hydraulics should also be offered in view of hydraulically controlled equipment.

The groups seemed to feel that more need be done in the area of vocational guidance. At the present time we need less laborers, and more people directed to the skill occupations.

It was the feeling of the group that skilled craftsmen and technicians require an individual with a good educational background, and the person should be a reasonably intelligent person. This poses a problem from the standpoint of selection and what to do with those whose abilities lie below this skill level.

We need:

1. Training in business practices for small operators-loggers-farmer-etc.
2. We also need knowledge of:
   a. machinery operation and repair
   b. heavy equipment operation and general repair
   c. welding and electricity
   d. We have serious shortages of able persons to harvest pulpwood.

There is no need in our area for training for:

a. Farm owner
b. Laborer
c. Nurseryman
d. Packer
e. Poultryman

Specific Recommendations:

We recommend a series of short term courses be offered on the 11th., 12th., and post high school levels to include the following:

Soils	Wild Life
Forestry	Water Management
Land Surveying	Chain Saw Operation, Repair
Carpentry	Heavy Equipment Operation
	Masonry

It is also recommended that the Dickinson County Education Camp be improved to provide better facilities for educational and conference activities of this type. We propose this camp as a resident center to be used to house students during a six or eight week summer program during which students could be trained for jobs in the following occupations:

1. Forestry aides
2. Golf course maintenance
3. Park manager aides
4. Lumber and log scalers
5. Heavy equipment operators
6. Cemetary Workers
7. Farm Wood Lot Workers

Note:

A change in coming in the harvest of wood products. Great interest is being shown in use of heavy equipment and training will be needed. The Dickinson County Education Camp is located in the Sturgeon River State Forest and is used approximately one month each year. It is owned jointly by several school district in Dickinson County and is well equipped and consists of three large log buildings. Members of the committee suggested that the following business and governmental agencies be contacted regarding the curriculum of such a program and placement of graduates of such short courses: U.S. Forest Service, U.S. Soil Conservation Districts, Michigan Department of Conservation, Kimberly Clark Corporation, and other paper making companies in the Upper Peninsula.

UTILITIES OCCUPATIONS

Sub Committee Recommendations

1. The committee stated: There is a great demand for industrial and construction electricians.

2. A basic course in electricity should be offered in each county.

3. If power plant operation is going to be covered, we need arrangements for facilities in a power plant where generators and turbines are used.

4. The programs should be under one director with coordinators in each county.

5. Metering should be taught in the course. (Voltmeters, ampmeters oscilloscopes, multimeters)

6. Persons entering this program should have a good background in math.

7. It was recommended that basic electricity should be set up at the 11th. grade level with the first semester of Basic Electricity, Second semester as Advanced Electricity; and on the 12th grade level Basic Electronics Course and the second semester a more advanced course.

8. Recommended that the student have a course in Circuitry reading and schematic diagram reading.

9. The Telephone Company has its own training program but the area school could teach the basic types of training in cable splicing.

10. It is recommended that students from neighboring Wisconsin cities be included in any class they are interested in.

11. Great interest was shown in classes in electricity to upgrade workers presently employed. Adult upgrading classes should be offered.

GRAPHIC ARTS AND PRINTING OCCUPATIONS

Sub Committee Recommendations

There is a great demand for persons in all the listed occupations of printing and graphic arts. Almost all types of printing are done in our two counties. There are some job opportunities in our area, and a great number outside our area.

All-around Printer
Compositer
Linotype Operator
Lithographic Cameraman-new but growing
Phototype setting Operator
Pressman
Sterotyper
Ludlow
Offset Pressman

1. One good program to serve both counties is recommended.

2. Provision must be made for an adult program.

3. A general course covering the field, plus specialization in certain areas should be available.

4. Start the program by offering offset work, including camera work, plate making, stripping, and presswork.

5. Include letter press as soon as possible.

6. Three hours per day for two years will give a person a good basic job skill.

7. It would be beneficial if a one hour per day-one year course could be offered in the sophomore year, to prepare, explore, and screen time. This may be difficult because of scheduling.

8. Offset Areas that should be covered

   a. Camera

   b. Stripping

   c. Platemaking

   d. Presswork

   e. Cold composition

Manufacturing Occupations

There is a need for:

Machine Operators
Machine Tool Operators
Machinist
Patternmaker
Painter and Auto Body Repair
Welders
Draftsmen and Layout Man
Assembler
Core Maker

Many industries need workers in these occupations, some locally and in the area, and many more in the nation. A serious shortage exists among persons trained in these occupations.

The committee felt that students need more visitation of industry in order that they become more enlightened about these occupations.

The schools should do more to help train persons for these fields and appropriate related instruction in Blueprint Reading and Mathematics should be offered also.

There is a good deal of manufacturing in the area with Foundry and Metal manufacturing employing many workers. Replacements are needed for retiring workers and normal expansion plans. No large scale increases were indicated by manufacturers.

HEALTH CARE OCCUPATIONS

Recommendations

1. We should offer a medical, and dental terminology Secretarial program in the area. It should be incorporated at grades 11 and 12, and an advanced evening course should be set for adults.

2. We should offer an introductory course for nurse's aides, orderly, and dental assistants for 12th grade students and an evening course for adults.

3. We should offer a training course for food service supervisors. This could be introduced into the Home Economics Curriculum at the 12th grade level and an evening course should be offered for adults.

4. Electronic Technicians and maintenance men could be used in the hospital. With the high school basic electricity and electronics course, the individual may adapt to the hospital equipment. Offer a unit of familiarization to interested students.

5. The Dickinson Memorial Hospital is the only accredited hospital that is large enough in the Dickinson-Iron area; and we should use some of its facilities and personnel.

6. A qualified instructor should be hired to teach Medical terminology, nurse's aides, and dental office assistants.

7. It is recommended that training in Health Care Occupations be extended to nearby Wisconsin cities.

8. The Dickinson County Memorial Hospital is currently short of licensed Practical Nurses, Nurses Aides and orderlies.

9. Training is now provided for L.P. nurses at Memorial Hospital in cooperation with Northern Michigan University, but upon completion of training they do not seek employment here but go to other parts of the Upper Peninsula. This program is not meeting with the needs of the Dickinson-Iron Area.

Clerical and Sales Occupations

General Recommendations

It is recommended that each high school in the bi-county area maintain the basic business courses such as: typing, shorthand, and bookkeeping as exploratory and general education.

It is recommended that office machines, advanced training for secretaries, specialized secretarial classes in legal and medical services, advanced training for stenographers, and courses in stenographic machines be combined into a business training program and offered in one center in each county. These same classes to be offered as adult education whenever the need arises.

Adult programs for Typing, Shorthand, and Bookkeeping should be offered as needed and where needed.

One center should be established in each county.

The following is one course with specialized phases:

1. Advanced training for Secretaries should be offered at a center in each county.
2. Specialized Secretarial classes in Legal and Medical services should be offered at a center in each county for grades 11-12 and adults.
3. Advanced training for Stenographers should be offered at a center in each county.

A course in Stenographic Machines should be offered in each county--one semester course--when needed and where; the type used in court reporting.

Needed, but probably after a basic program is established, one data processing center for the two counties for grades 11 and 12 and adult level.

a. If the student demand warrants it, a second center should be established.
b. Equipment and possibly quarters can be rented.

Training for Retail Sales persons is needed in the area.

a. A waitress training program is needed--short course to train present waitresses, from time to time. (Trained or experienced help is difficult to find.)

A high school Distributive Education Program should be established in each county.

A full time Coordinator of Co-operative Training should be hired in each county, to work with Business Leaders and students in setting up training stations in various stores and shops.

If students are given part of the school day to work, it should be under an organized program set up by the combined efforts of a Vocational Director, two co-op coordinators and an Advisory Committee of Business Leaders in the two counties.

Clerical and Sales Occupations

General Recommendations (Con't.)

A Distributive Education Program for adults should also be available on a county basis, to retrain adults; adults would need the basic business background.

Other highly specialized occupations such as Real Estate Salesman, etc., could be covered on a larger geographic area, with perhaps one center for the entire Upper Peninsula.

Service Occupations

Advisors from the hotel, motel and food serving industry in the area are experiencing some difficulty in getting persons to fill some of the positions available. It is felt that some programs in food service and waitresses would be highly desirable especially in light of the area's attempt to attract large numbers of tourists to the area all through the year. In addition some of the managers told us that they prefer older persons for many of the jobs that they have open.

The committee feels that a program for older persons in addition to a co-op on the job training program for interested younger persons who are in school would meet the needs for many of the local establishments. The Co-op plan with additional in-school related instruction would provide the needed opportunity for high school youth.

Local Business and Industry

Many business and industrial establishments in the two-county area were contacted during the course of study. The pattern of needs by local business and industry that emerged is much the same as it is in many other small towns across the nation, that is, most of our high school graduates cannot find employment in the local area and they must therefore, leave the area to seek more education or employment.

The number of current vacancies listed by the business and industry contacted was a small number in most cases, and labor turnover is not great in this area. However, future expansion and replacement of workers will raise requirements. In addition, we know that a great many of our graduates leave the area and the committee feels that establishing programs is very necessary to prepare our young people for employment after graduation. We know for example, that many of our graduates and dropouts, go to the Milwaukee area to seek employment. We also know that Milwaukee has one of the best vocational schools in the United States, therefore, our graduates are at a serious disadvantage when it comes to getting and holding jobs. This would become much more apparent if the economy of the nation slowed down any appreciable amount, than it is now.

The following business and industrial establishments were surveyed to determine needs:

Montgomery Ward
Great Lakes Toys
LoDal Inc.
Dept. of Conservation
Norway Coop Canning Association
Fugere Brothers
Peterson Welding
Lake Shore Inc.
U.S. Post Office
Odgers Drilling
Norway Gravure
Inger - Teco Corp.
Ace Drugs
Ben Franklin
Dickinson Hotel
LaFreniere Motor Co.
Proksch Lumber
Iron Inn
Kimberly Clark Corp. Woodland Division
The General Agency
Hanna Mining Co.
M-J. Electric Co.
Dickinson County Memorial Hospital

Suggested Administrative
Pattern for a Cooperative
Area Vocational Education Program

Post High School

Technical Education

Transfer Program

Post High School
Technical Education

It is recommended that the schools of the area join together in cooperation with the Soo Branch of Michigan Technological University to develop a first year transfer program in Mechanical and later in Electrical Technology.

Student selection, teacher selection, course of study, length of course, number of clock hours, etc., should conform to rigid standards as determined by Michigan Tech. officials in order to insure a quality program and full acceptance of credits in the two Technology Programs.

Upon successful completion of the first year program in the Dickinson-Iron Area Program, the student would then transfer into the second year courses at the Soo Branch of Michigan Tech. University and complete the technician requirements there; thus earning an associate degree (2 year) in Mechanical Technology or Electrical Technology.

Employer and Committee
Comments on

Post High School Technician Training

1. "There is a considerable need for Mechanical Technicians."

2. "Promote the wood products industry which is the greatest natural resource in terms of U.P. employment. A more highly generated interest will be needed by means of broad publicity to attract the participation of those employed in this field."

3. "Begin some action on the establishment of Machine Operator and Drafting courses."

4. "I am very pleased with the technical training program being considered in the field of engineering. This field appears to be the most logical "first" for several reasons but primarily because of need in this field, and its appeal to the young. It should be the easiest to attract response and participation, which of course is the most essential ingredient."

5. "I am very much in favor of any vocational programs we can set up and I am willing to work towards this goal."

6. "I am not too familiar with Electrical Technician needs but I am confident that there is a considerable need for Mechanical Technicians. I would be happy to assist in any way further."

April 21, 1966

Mr. Larry Vardo, Chairman
Vocational Technical Education Study Committee
Kingsford High School
Kingsford, Michigan

Dear Larry:

We certainly would be happy to work with you regarding an integrated program that would allow for a maximum of transfer credits to our Mechanical Engineering Technology program. We are going to introduce a new program in Electronic Engineering Technology also, this coming fall and this might be an idea for us to explore as well

I would like to compliment you on your interest in Vocational Technical Education and feel that this will greatly assist many young men and women in your two county area. I will be off campus for the next two weeks but will be happy to meet with you after that time.

We appreciate your interest in Michigan Tech and look forward to working with you.

Very sincerely yours,

Kenneth F. Light (sc)

Mr. Larry Varda, Chairman
Vocational Technical Education Study Committee
Kingsford High School
Kingsford, Michigan

Dear Larry:

We would be happy to cooperate with you and your community in establishing a transfer program in the Kingsford area to our Mechanical Technology program. I am certain that there are several courses that could be taught at post high school levels in your area that we could recognize as a part of our program.

I am enclosing a bulletin of this program and course outlines to give you some idea of the technical detail involved. The blue booklet is somewhat out of date but it does give you some idea of each individual course.

We would be very pleased to work in greater detail with you if you desire to explore this possibility further.

We look forward to hearing from you.

Very sincerely yours,

Ken

Kenneth F. Light
Associate Director/Dean

KFL:sc
Enc.

Associate Degree in Mechanical Engineering
Technology
A 2 Year Program for
Engineering Technicians
Sault Branch-Mich. Tech. University

I. A NEW OPPORTUNITY, ENGINEERING TECHNOLOGY

The engineering technician is emerging as the newest member on the engineering team. Educationally he is the graduate of a technical type of curriculum as accredited by the Engineers Council for Professional Development, or the equivalent. On the job, the technician performs semi-professional engineering and scientific functions largely on his own initiative and with only general supervision by an engineer.

THE ENGINEERING TEAM

As man has increased his technical knowledge through the activities of scientists and engineers, a need for specialization has developed. The engineering team is composed of three members: the engineer, the technician and the skilled craftsman. Because the technician works with the engineer, he must understand engineering language; the mathematics, the graphics, the specialized subject matter and the communications skills.

II.

The technician is the link between the engineer and the skilled craftsman. He receives from the engineer a creative idea and applies theory and principles he has learned to create a new tool or product. The technician must also know the capabilities of the skilled craftsman so that his designs will be practical and economically feasible. The technician, therefore, is an important member of the engineering team.

III. HOW DOES TECHNICIAN TRAINING DIFFER FROM THAT FOR AN ENGINEER?

Because of the need for advanced mathematics in research activities, the engineering student spends much time learning mathematics aimed at courses of a highly theoretical nature. The engineering technician, on the other hand, studies only mathematics which applies to work in which he will be involved. Since he is not concerned with deeply theoretical research, his math curriculum is tailored accordingly.

Another difference is in the amount of time spent in the laboratory. Since the emphasis in the technician program is on the application of basic scientific and engineering principles, the student will spend 40 to 50 percent of his time in graphics or laboratory type courses.

In terms of human activity, as compared to the engineer, the technician is more of a "doer" than a "thinker"! Since different personalities are suited best to different types of activity, this practically oriented technical program is of interest to those who like to obtain tangible results.

CURRENT OFFERINGS - May 16, 1966

CURRICULUM FOR MECHANICAL ENGINEERING

TECHNOLOGY

R. Curtis, Chairman Mechanical Engineering Dept. Soo Tech.

First Year - Fall Quarter			Cr.
MA	811	Algebra	5
CH	821	Chemistry	4
HS	811	English	3
TE	811	Technical Drawing I	3
TE	813	Materials Processing I	3
PE	131	Physical Education	1

PLACEMENT SERVICE

MTU-SOO provides placement service for graduates of the ASSOCIATE DEGREE programs. This service provides numerous opportunities for prospective employers to interview graduating students.

ADMISSION REQUIREMENTS

To enter the program you must be a high school graduate or equivalent. One year of Algebra and three years of English are required. In addition, it is strongly recommended that you have credit in Plane Geometry and Physics. It is possible for students entering with deficiencies to take lighter loads and complete the program in three years instead of two.

Credit earned toward the Associate Degree does not automatically transfer into a four year baccalaureate degree program. Students seeking a higher degree at a later date must have each course evaluated by the accepting institution.

COST OF THE PROGRAM

The costs of technical education are moderate because you will complete your program of study in two academic years. Cost per year for tuition and books is about $375 for Michigan residents and about $675 for non-residents. Cost per year for room and board is about $765.

SUMMARY

It is readily apparent to even the most casual oberver that a genuine feeling of cooperation between the various school districts must exist before much of any importance will be accomplished in the field of occupational training. Even the largest of schools in this area does not have sufficient enrollment, or tax base, to justify offering classes in more than a few vocational choices. Barring unforeseen large industrial or mining developments the outlook for the future is only average. The valuation of school districts is not growing as rapidly as in some other districts in Michigan but rather is growing slowly and in some cases is declining in this area. The high school (9-12) population in Iron County will drop from 1338 students in 1964-65 to a projected 1035 in 1975-76 and will drop again to 898 in 1977-78. Projections for Dickinson County do not show a loss this great, but Dickinson County did have a net loss of 927 persons (all ages) or 3.7 per cent from 1950-60 and by using various projections the total population in Dickinson County is shown to be decreasing in all projections: Dickinson County 1960-23,917--1970 projection a 23,850; projection B 17,990; projection C 23,030. However, projections of the school population shows an increase in the next few years.

Thus it would seem that school districts in the two counties will face increasingly difficult years ahead unless factors not yet evident come into play on a large scale.

The great majority of the citizens advisory committee agreed that vocational and technical education in the Dickinson and Iron County Area needs a good deal of improvement. In general, it can be stated that we are not offering a sufficient variety of courses

at present, and that courses should be in greater depth. Many of the present offerings in this area of Michigan are practical Arts: (exploratory-general education) rather than vocational: (occupational-job entry level preparation).

It was also brought out by several groups that trade related subjects must be offered. (Blueprint Reading was frequently mentioned). Most people felt that there was no one solution to the problem of where classes should be established, but rather, that some programs should be offered at several schools, while other programs should be held at one location in each county and that still others, should be held at only one location for the two counties. The location of the vocational offerings would depend on the demand for the course by the students, and of course, the costs involved in establishing such a program. For example, the sub committee on the Graphic Arts and Printing felt that one good program that would serve both counties for Printing classes would be sufficient, while in Stenographic Training and Office Machines it was felt that a center in each county would be needed. The committee also felt that basic, general education courses, such as Industrial Arts exploratory subjects, General Business, Typing and Shorthand, should be offered in all schools and should be available in grades 7-8-9. It also was recommended that many adult classes be available to anyone in the area, including persons from nearby Wisconsin.

The majority of the citizens advisory committee agreed that the two counties are as good a sub division of an overall vocational plan for Michigan as can be devised for this area. The two counties are already combined for the following services: The Dickinson-Iron Mental Health District, Dickinson-Iron Intermediate School District, Services of the Office of Economic Opportunity Programs, and the Dickinson-Iron Health District. The Dickinson

County Library is also headquarters for the Mid-Peninsula Library Federation. Northern Michigan University also has established a resident center for students in Iron Mountain and Kingsford and this center serves anyone in the area. Hospital service in Dickinson County is also combined for administrative purposes under a Dickinson County Hospital system as is the Dickinson County Public Library system. The Veterans Administration Hospital in Iron Mountain serves all of the Upper Peninsula and Northern Wisconsin.

In addition, the following Business Firms seem to regard the area as one unit: Michigan Bell Telephone Company, Wisconsin-Michigan Power Company, North Central Airlines, Michigan Consolidated Gas Company, and Hanna Mining Company.

When asked about numbers of sufficiently trained people in the area to meet the needs, a vast majority of business and industry people said no, trained people are not available. This coincides with a statement by Mr. Richard Windberg, Michigan Employment Security Commission official, who stated that very few skilled workers are unemployed in this area at this time.

In the many specific occupational areas, persons on the advisory committee said their occupations required occupational training to perform the job satisfactorily, and the majority of persons stated further, that most high school graduates need a considerable amount of additional education and training before they can perform satisfactorily. Over 50% said they found it inadvisable to employ young high-school graduates, except for unskilled jobs, and this is borne out by their statements on the questionnaire that they prefer to hire more persons from 25 to 35 years and from 35 to 50 years than they do from 18 to 25 years. Most committee members agree that we should improve the quality

and quantity of practical arts, exploratory education as well as establish and improve the vocational job preparatory classes.

From the total of 1,681 student occupational interest forms in grades 10-11-12 and the student interest forms in grades 7-8-9 a surprising similarity in occupational choices is noted. For example, 14 boys in 7-8-9 and 14 boys in 10-11-12 expressed an interest in logging and wood pulp production. Nineteen boys in each group expressed a desire to work in the field of electricity. 130 girls in one group and 137 in the other expressed a desire to be Beauticians. 49 in one group and 41 in the other want to be Policemen. Thirty-six in group 7-8-9 and 48 in the other chose Drafting and Designing. Thirty-three in the 7-8-9 group and 29 in the 10-11-12 group chose the field of electronics. However, the occupation of farmer showed a significant change from 24 in grades 7-8-9 to 10 in grades 10-11-12. This corresponds with advice from the Advisory Committee that there is no need for new programs in agriculture in this area.

However, in the field of Forestry and Wood Production, classes are suggested by the Advisory Committee.

Final General Recommendations

1. It is recommended that the school districts in Dickinson and Iron Counties establish the position of Vocational Administrator to work with directors in each school district, thus utilizing all the facilities to maximum capacity.
2. It is recommended that all vocational offerings within the area be coordinated and offered through the intermediate school district office, under one administrator.
3. There should be an improved program in vocational guidance and testing. This program should be coordinated by the intermediate school district, and should begin at the Junior High level. This would allow the two-county area to have standardized procedures in all areas of occupational education. A review of present testing procedures indicate a lack of uniformity throughout the area.

   It is recommended that every student tested through the intermediate school district be given full interpretation of the results of such tests prior to the selection of his high school program.
4. It is recommended that a cooperative training program be set up in the two-county study area. This program would allow many students an opportunity to gain work experience on the job in the various occupational fields while also completing his high school academic subjects.
5. While the intermediate district is in the process of development in the area of vocational education, it is recommended that the individual schools make use of their present facilities by allowing enrollment of students from out of the district who seek training in a specific occupation. This should begin in the fall of 1966.

6. It is recommended that post-high school training programs offered by other presently established centers be utilized. This would include such programs of those offered by M.T.U. at the Sault, Bay de Noc Community College, N.M.U. terminal programs and M.D.T.A. programs.

7. It is recommended that the intermediate district give cooperation to UPCAP or other established responsible groups who may promote the establishment of an Upper Peninsula Post High School Occupational Training Center, for those occupations that are more specialized and costly than the ones listed in this report.

8. The intermediate district should seek to establish better relations with the business and industry of the area. It is felt that these local concerns can offer much in the way of technical, financial and advisory services to the schools, and in turn the schools will be in a better position to offer business and industry the type of retraining or upgrading programs they desire.

9. We recommend that members of the committee, employers and other skilled persons, be asked to serve on an advisory committee to serve the needs in each occupation speciality in the intermediate district.

10. It is recommended that the intermediate school district office maintain good working relations with the M.E.S.C. to aid the students completing programs in job placement. Also maintain relations with local unions. Apprenticeship committees should receive full cooperation of all school officials and districts.

11. It is recommended that all program offerings through the newly established intermediate school district office shall be of such a nature to allow the student a reasonable chance of job

placement. The student must have enough native ability to benefit from the instruction offered.

12. Local business and industry are in many cases reluctant to hire high school graduates even though their training may be adequate. It is recommended that some effort be made to improve this image.

13. It is recommended that every vocational student have supervised work-experience program as an integral part of his occupational preparation.

14. We recommend that needless duplication of effort in some areas of training be stopped and that the space and teachers thus released be used to offer new courses and courses in greater depth to all interested students.

15. Bus Transportation

In order for a system of area vocational education to work, we must depend on our transportation system. Of course, in this case, we refer to school buses, and the transportation of students to area programs and to area classes, whether in rented buildings or area vocational schools. We recommend Transportation Reimbursement for all students to attend area vocational programs. We feel that many small schools will not be able to finance the needed extra transportation, and many of the students that need occupational training will have it denied them. We urge the Legislature and the Department of Education, Lansing, to take action on the problem of transportation for vocational area classes and area schools.

16. Buildings It is recommended that any new buildings be designed to be extremely flexible. For example: in any future new construction all interior partitions should non-load bearing

to allow flexibility in the event of program changes. This will allow relocation of interior walls at will.

16-b. It is recommended that existing facilities be utilized in Dickinson County. These facilities should be available to students of both counties to allow maximum utilization.

c. There are no suitable facilities at present in Iron County for occupational education. It is therefore recommended that facilities be rented until such time as construction can take place.

d. As soon as possible there should be facilities constructed in the bi-county area (serving both counties) to allow training in those areas of specialization which do not warrant instruction in more than one location. In the interim, rental space should be secured for these programs also.

17. Scheduling It is recognized that scheduling in this type of program will present difficulties. If scheduling cannot be accomplished locally we suggest scheduling by computer at Northern Michigan University.

18. Because of the increasing complexities in the occupations studied, enrollment should be limited to those who can derive the maximum benefits. We can no longer depend upon the typical industrial arts student as a source of personnel to answer the need for technicians unless adequate screening and vocational guidance is conducted.

19. A special occupational program must be provided to take care of the needs of those whose abilities are limited.

20. It is recommended that a unit in Communications be offered for occupational students during the senior year. This course will allow the student an opportunity to learn to speak, write, make job applications, and do simple reading for meaning. Resource

people from all areas of business and industry should be utilized to give maximum meaning to this course. It should be taught on a work-shop basis.

21. It is recommended that post-high school and adult education programs be offered to train technicians. The college dropouts should not be overlooked as a potential source of student to fill the role of technicians.

22. In the area of <u>financing the program</u>, the following are some suggestions that could be followed:

    (a) direct payment of tuitions by participating districts to operating districts

    or

    (b) exchange of students within the intermediate school district on a no-charge basis

    or

    (c) the establishment of the area vocational school with the intermediate district operating on a separate tax levy for vocational education

    or

    (d) the establishment of the area vocational school by the intermediate district whereby each participating school contributes a set fee plus a set amount per pupil participating

    or

    (e) Some other mutually agreeable financial agreement.

23. Any program of finance proposed must guarantee a long term commitment by all the school districts.

    (a) Without long term agreements some schools may tool up

with expensive equipment for a tuition plan and then lose the tuition students after two or three years.

(b) To permit adequate planning and development of program, long range plans are needed.

24. Present Facilities

Some of the existing high schools have adequate Pre-vocational facilities. (Industrial Arts Shops, Typing Rooms, Home Ec. facilities) but very few, if any, really have both an adequate building and adequate equipment to teach several occupations. It is recommended that most present facilities be used for general education pre-vocational offerings and that space be rented to offer many of the consolidated and new vocational classes. The smaller high schools should take immediate steps to join other schools for the Pre-vocational classes and it is recommended that all of the high school districts join together to start an area vocational program for the present using available buildings and equipment, and renting other space, and in the future, building an area vocational school.

Recommendations for improvement of Guidance and Counseling Services

The study coordinators found great differences in the practice of guidance and counseling in the ten high schools. We found that the same Standardized tests are not used in all of the high schools. We urge an in-service training program for guidance counselors in the area with coordination from the intermediate district office and in cooperation with Northern Michigan University. We also urge that Field Trips to business and industry be increased by all schools in order to more fully acquaint students with the world of work. We further urge the establishment of Business Education and Vocational, Industrial Clubs on a County level beginning in the seventh grade and continuing through high school with meetings one evening each month. The main purpose of such clubs would be to acquaint youth with Business and Industry by the use of speakers from the employment service (M.E.S.C.) business, industry, and the professions. Field Trips should be taken and films used to further acquaint students with occupational information. We further urge that the Northern Michigan University Television channel be used on a regular basis to broadcast occupational information to students throughout the Upper Peninsula of Michigan.

We feel follow up studies of graduates and dropouts should be by all high schools on a regular basis and experiments in curriculum change should be carried on, and the information gained should be made available to all school districts in the area.

A student that attends any of the vocational programs offered in the Dickinson-Iron Intermediate District should have at his disposal a job placement service operated by the ten high schools in cooperation with the Michigan Employment Security Commission.

We recommend that a Vocational Certificate be issued to those persons that successfully complete a prescribed course of study for each occupation taught. This will enable employers to hire persons better suited to a job and it also will help the students obtain employment.

Low Achievers

We recommend a program of studies, on an area basis, for students who probably cannot succeed in the regular vocational program. This program should de-emphasize the verbal ability and mathematical computations necessary in many of the skilled trades and should emphasize the positive assets each student has instead. We feel a program of this type should be undertaken as an experiment to better meet the needs of those who cannot complete successfully in the higher skilled occupations.

Handicapped Persons

We recommend a further study of the needs of the physically handicapped persons in the Upper Peninsula. We applaud the efforts being made by the Michigan Rehabilitation Institute at Pine Lake, and feel that the need for such an institution in the Upper Peninsula should be investigated.

Dropouts

We have recommended many new classes be offered in addition to more adequate counseling. We feel the prevention is more important than trying to provide a program for them after they have left school. A recent survey disclosed that most dropouts leave the area, and seek employment in other cities, therefore we feel a special program for dropouts is not needed at this time.

Counseling and Guidance

"Counseling and guidance services presently available to vocational high school students are very inadequate--both in quantity and quality. Guidance personnel quite often lack sufficient knowledge about occupations, labor markets, and training problems. Actually, vocational counseling has become more or less a clerical and mere information function. Better relationship should be established between counselors and State employment services. Counseling and guidance for vocational students must be of the same quality as is available in many schools to college "material." [4]

4. Peter T. Schoemann, The Changing Needs of Vocational Education. A Report to the Panel of Consultants on Vocational Education. Washington: United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry, Aug. 10, 1962, p.11.

CONCLUSION

In this study we have attempted to describe the ambitions of the boys and girls, the experience of our recent graduates, the aspirations of our dropouts, the needs of our local and area business industry and a plan of attack to improve the occupational offerings in this area.

We find that the conclusion of the report, Education For A Changing World of Work, states the problem very well:

> "We have examined vocational education against the backdrop of mobility, urbanization, technological advance, and the population explosion of the 1950's and 1960's. We conclude, as Margaret Mead has observed:
>
> The most vivid truth of our age is that no one will live all his life in the world into which he was born, and no one will die in the world in which he worked in his maturity.
>
> These conditions, which are without precedent in their intensity, produce very difficult social and economic problems and present a challenge to our ingenuity, intelligence, and statesmanship.
>
> Only a rising general educational level and an increasing skill competence of individuals will provide the power to meet this challenge. Education, which raises our personal and national levels of living and enhances our position of leadership in the world, is thus the key to the future.
>
> Americans hold that the manifold tasks of the world of work are all equally important and that the man dignifies the job, not the reverse. We believe that, in a democracy, everyone should have access throughout life to the education and training needed to develop to his highest potential. Education is a continuous process, not an injection that thereafter makes the individual immune to ignorance and the need for knowledge.
>
> General education--language and arithmetic skill, plus basic knowledge of the world about us--itself contributes indispensably to occupational competence.

Vocational education and general education are complementary and equally important to individual occupational competence.

The Panel concludes that expanded vocational education, apprenticeship, and technical training are especially needed now to prepare both new workers and the unemployed to fill the job openings available for skilled or specialized workers. These education programs should be administered with flexibility in order to adjust to the rapidly changing technology and to the varied social and economic needs of individuals." [5]

*COOPERATIVE EDUCATION; *TRADE AND INDUSTRIAL EDUCATION; *STUDENT EVALUATION; *EMPLOYER ATTITUDES; MASTERS THESES; QUESTIONNAIRES; STUDENT CHARACTERISTICS; *PROGRAM EVALUATION
IOWA

Data were collected during 64 personal interviews with cooperating employers for these purposes: (1) to identify characteristics displayed by student, (2) to identify skills demonstrated by students, (3) to identify significant strengths or weaknesses of the program, and (4) to reveal suggested procedures for increasing program effectiveness. The employers were asked to rate students, whom they had trained in the past five years, on a 6-point scale for 19 personal characteristics and 16 skill-related items. Highest ranking weighted scores for personal characteristics were given to: (1) loyalty, (2) choice of language, (3) other's safety, (4) other's feelings, and (5) cheerfulness. Highest ranking weighted scores for skills were given to: (1) familiarity with equipment at last of period, (2) composition of written reports, (3) vocabulary at last of period, (4) selection of tools and equipment, and (5) safety. These rankings indicate the personal characteristics and skills which received the best ratings by employers. This Masters Thesis was submitted to the Iowa State University of Science and Technology. THIS DOCUMENT HAS BEEN REPRODUCED EXACTLY AS RECEIVED FROM THE PERSON OR ORGANIZATION ORIGINATING IT. POINTS OF VIEW OR OPINIONS STATED DO NOT NECESSARILY REPRESENT OFFICIAL OFFICE OF EDUCATION POSITION OR POLICY

Enclosed is a reprint of a field study which relates the responses made by employers during sixty-four personal interviews. They rated the skills and personal characteristics of 191 student-learners. Employers also evaluated various aspects of Cooperative Industrial Education Programs in Ames, Marshalltown and Newton, Iowa. Their comments are considered to be an important part of this research and may help to stimulate a more rapid development of improved educational programs.

Portions of this report are expected to be of special interest to Coordinators of Cooperative Industrial Education Programs. This educator plans to use some of the material in related instruction class, and other portions to help plan improvements in the various aspects of program operation.

As a pilot study, this research may serve as a basis for planning additional needed research in Distributive Education and Office Occupations as well as in Industrial Education. Any communications relative to this report may be sent to the Industrial Education Department, Iowa State University.

Sincerely,

Charles Havener

INTRODUCTION

Maximum development of the whole person has been a goal of quality education. The part-time cooperative industrial education program has played a very significant role in helping many young people focus on and move toward that goal. It has been a program in which student, employer, parent and school enter into an agreement[1] for the purpose of training the student in a specific industrial occupation. The student-learner[1] (a high school senior, 16 years or older) participates in classes at school for half the day and gains practical, on-the-job experience in an industrial occupation during the other half-day. The industrial experience takes place under actual working conditions with well qualified, experienced craftsmen and technicians to provide the student-learner with instruction and supervision.

The part-time cooperative industrial education program[2] is a part of trade and industrial vocational education[1], one of five divisions of vocational education[1], and has long been recognized as a vital element in the education of this nation's youth. In a Report by the Panel of Consultants on Vocational Education (9-264):

> Vocational education and general education are complimentary and equally important to individual occupational competence.

Successful programs date back to 1918 nationally and to 1935 in Iowa (8). The first positive action in the development of vocational industrial education came in 1906 when a small group of men formed the National Society for the Promotion of Industrial Education (9). During the past half-century there have been continuous and accelerated increases in numbers of students, programs and invested dollars. Meanwhile, research on the program has experienced neglect.

> Much less research than is needed has been done in the field of operational efficiency, and some research findings which might improve instruction have not been implemented (9-124).

Had programs been less successful, more time, money and talent might have been expended on research in attempts toward increased effectiveness. The lack of research should, perhaps, be classified as a tribute to the hundreds of communities who through the years have developed and supported successful programs. Much of the success has likely been a result of continual "fragmentary research" conducted by the coordinator[1]. Collection and analysis of data (comments, facts, suggestions and observations) have been accomplished on a regular (usually daily) basis during coordination[1]. Answers provided by the results of "fragmentary research" have been essential to the solution of day-to-day problems. There are, however, some inherent limitations which make supplementary research a necessary part of a thorough program of evaluation.

> Very little research evidence or organized body of knowledge of the activities in vocational education is available to justify many of the practices in instruction or supervision (9-243).

Previous, limited research of the part-time cooperative industrial education program had been based almost exclusively on data from only two sources: (a) responses from graduates of the program, sometimes compared with responses from "non-coop" graduates and (b) high school records. An exception to this was research done by Shadle (7) in

---

[1]Refer to definitions.

[2]Hereafter referred to as program.

which an employer rating scale was completed during personal visits with employers.

Research in which data are based on school records and graduate responses, has frequently been termed a "follow-up study." (Follow-up study should not be confused with follow-up record[1].) Follow-up studies, though few in number, have provided some sound answers to some vital questions.

A source of data virtually neglected except in "fragmentary research" activities, has been the cooperating employer[1]. The following was presented to help portray the cooperating employer's role in a student-learner's development. The cooperating employer (a) interviews the prospective student-learner[3], (b) helps provide orientation to an occupation, (c) may or may not hire the S-L, (d) provides on-the-job training and supervised work experience, (e) evaluates S-L performance, (f) may suggest that S-L is likely to be happier and more successful in some other occupation, (g) may suggest that S-L's prospects for success and happiness in the occupation are good, (h) may offer the graduate S-L a position as a full-time employee or offer a good recommendation, (i) may suggest and/or finance further specialized training. Thus, the cooperating employer has lived the roles of personnel manager, employer, instructor, supervisor, inspector, fellow worker and vocational advisor.

The S-L, a product of his interaction with home, community, and school, usually comes to the cooperating employer as a "raw recruit." By the end of the senior year, the S-L and cooperating employer have invested from 540 to over 1000 hours in joint working relationships for the purpose of helping the S-L develop marketable skills. There has been opportunity for the cooperating employer to get well acquainted with the S-L as a person and as a worker. The youth emerges from the role of S-L, a product of his interaction with home, community, school and cooperating employer. The cooperating employer has had the combined opportunity to (a) look at the youth as a new worker, (b)teach skills on the job where immediate and true-to-life application of the skill is experienced, (c) test and evaluate the S-L's performance under actual occupational conditions, (d) make a comparison between S-L's characteristics and characteristics of successful workers in the occupation, and (e) gain a potentially valuable employee.

The researcher concluded that cooperating employers were capable of supplying the research data required to answer the following questions which were considered to be the appropriate means of stating the problem.

(a) Do student-learners exhibit poorly developed personal characteristics which are necessary or desirable for success in the occupation? If so, which characteristics are affected and what is the level of development?
(b) Are student-learners handicapped as a result of inadequately developed skills? If so, which skills are affected and what is the level of development.
(c) What are the most evident strengths of the program?
(d) Are there areas of weakness in the program? If so, please describe each weakness.

---

[3]Hereafter referred to as S-L.

(e) What are some changes that would likely improve the program?

The two-fold purpose of this research was (a) to describe various aspects of the program from the cooperating employer's point of view and (b) to determine the relative value of the cooperating employer as a source of research data.

The following assumptions were made on the basis of the researcher's observations and experiences.

(a) Many years of favorable results have proven the effectiveness of part-time cooperative industrial education programs.
(b) There has been much interest in making successful programs of education even more effective.
(c) Research of increased quality and quantity holds the best promise for acquiring answers which will be useful in planning more effective programs.
(d) Cooperating employers are one of the most important sources of data.
(e) Cooperating employers are willing to participate in research activities designed to evaluate program effectiveness.
(f) The completed research will serve as a pilot study which may help point the way to closer research relationships between industry and education.
(g) The completed research will be of interest to coordinators, employers, parents, school administrators, students and teachers. (The aforesaid groups have a significant influence upon the development of each youth prior to and during status as a student-learner.)

Objectives

The following specific objectives served to direct the research activity.

1. To design an instrument for the purpose of gathering research data (observations, opinions) from cooperating employers.
2. To enlist cooperating employers as evaluators of (a) student-learners and (b) part-time cooperative industrial education programs.
3. To identify personal characteristics displayed by student-learners.
4. To identify skills demonstrated by student-learners.
5. To identify the most significant strengths of the program.
6. To detect any observed weaknesses in the program.
7. To reveal suggested procedures which may be employed to increase program effectiveness.

Definitions

Advisory committee-

A group of persons (representing business, industry, labor and the community) who advise a coordinator in the overall operation of the program.

Agreement-

Entered into by each student-learner before he starts to work. Wages and terms of employment are stated. This agreement is approved by the employer, the school, the student-learner and parents or guardian.

Cooperating employer-

Any business, shop or industrial establishment which employs a student-learner for the purpose of giving on-the-job training in cooperation with the school. (For purposes of this research the definition is expanded to include supervisors and managers within the establishment.)

Coordination-

That phase of the coordinator's responsibility which involves visits to homes and cooperating employers for purposes of helping student-learners advance in the occupations for which they are training. Correlating the related study in school with job progress. The process of operating all phases of a part-time cooperative industrial education program.

Coordinator-

The individual who is responsible for the operation of a part-time cooperative industrial education program.

Follow-up record-

A record showing the employment status of former graduates who have participated in the part-time cooperative industrial education program.

Related instruction class-

The class at school where related study takes place under the coordinator's direction. Areas of study are (a) general information desirable for all workers and (b) specific information essential to performance of certain job operations.

Student-learner-

Any student having the proper qualifications who has been selected and enrolled in the part-time cooperative industrial education program.

Trade and industrial vocational education-

Training for skilled or semi-skilled crafts or occupations which involve functions of designing, producing, processing, assembling, maintaining, servicing or repairing which are not specifically covered under agriculture, distributive education, home economics or office occupations.

Vocational education-

Education and training of less than college grade for the specific purposes of (a) preparing persons of employable age for advantageous entrance into skilled trades and occupations and (b) enabling persons who have left school and entered employment to obtain instruction which will fit them to do better work and to take advantage of opportunities for advancement. The five divisions are agriculture, trade and industrial, home economics, distributive, and office occupations.

Ames, Marshalltown and Newton

All three cities are located almost in the center of the state of Iowa and are served by major federal highways. Populations (1960) ranged from Newton's 15,381 and Marshalltown's 22,529 to 27,003 for Ames.

Metal working has been the backbone of Marshalltown's industry. In 1963, 47 plants employed 4,800 persons. Marshalltown has been described as "Iowa's little Pittsburgh" (6).

Newton's fourteen industrial plants employed 4,349 persons according to figures available in March, 1966. Newton has been referred to as the "Home laundry appliance manufacturing center and advertising specialty center of the world" (3).

Ames' largest private enterprise employed 1,000 persons in 1966. State and federal institutions such as Iowa State University, Iowa State Highway Commission and National Animal Disease Laboratory were the larger employers. An account of all persons engaged in trade and industrial functions was not available (1).

At the most recent count, the public schools of the communities had similar enrollments at the elementary and secondary levels. Newton had 5,217, Ames totaled 5,308 and Marshalltown, 5,504. Other schools at the primary and secondary levels were a parochial elementary school in Newton and one in Ames. Marshalltown had three parochial schools; one high school and two elementary schools.

There was a close similarity between the curricula of the three schools. Industrial arts offerings were electricity-electronics, drafting, power or auto mechanics, metalworking and woodworking.

REVIEW OF LITERATURE

Efforts to find research which had been designed to evaluate part-time cooperative industrial education programs[1], revealed a rather small number of research reports. Most frequently found were follow-up studies on graduates of the programs.

By means of a comprehensive questionnaire to graduates, Ryerkerk (5) sought to determine (a) per cent working in general occupation where training was received, (b) per cent who felt training was of value in obtaining, holding or advancing in job, (c) per cent continuing their education, (d) kinds of vocational training which would be selected if graduates were in high school now, and (e) interest in post-high school training. Graduates were also asked to suggest ways of improving the program. Questionnaires were returned by 102 graduates. Over 80% reported the program useful in helping to obtain, hold and advance on the job. Responses made it evident that the program had been of definite value and suggestions for improvement were presented by the graduates.

In a follow-up study by Rowe (4), 80 graduates responded to a questionnaire and revealed that 65% were working in the same (or related) occupation for which they had trained as student-learners. Respondents were asked to suggest ways to improve the program. Many of them stated program strengths and made suggestions for an improved program. It was concluded by Rowe that the program was meeting current needs and that continued evaluation would be necessary to assure a well designed program.

In research conducted by Shadle (7), employers were contacted personally for the purpose of completing job adjustment rating scales on each of 168 employees. Half the employees were graduates of the program and half had not taken the program in high school. Half the employees were girls, the other half boys. Four sub-groups were established with controls on mental ability, high school achievement, and length of time since graduation. Data were treated with analysis of covariance with multiple classification. In comparing those who had taken the program with those who had not, it became evident that the program helps one to become a better student in school and to adjust more readily to a job. Of the program graduates, 79% were in the same job or in an occupation allied to the training received in high school.

Other studies have dealt with evaluations of industrial education programs of which part-time cooperative industrial education is a segment. Studies in this classification have had relatively less to reveal about the effectiveness of the program in question.

Throughout the search, there were no signs of research in which employers were asked to privide data, opinions or suggestions relating to the program.

---

[1]Hereafter referred to as program.

PROCEDURE

After making the tentative decision to conduct the planned research in the cities of Ames, Marshalltown and Newton, the coordinator of the part-time cooperative industrial education program in each of the three school systems was visited personally. The general plan and the objectives were made known and each coordinator indicated a desire to have his community's program included in the research project.

Each coordinator was asked for copies of "Semester Report for Part-time Cooperative Industrial Occupations Class" (T.I.-13) for school years 1961-62 through 1965-66. Original copies of the reports were filed with the State Department of Public Instruction, Division of Vocational Education, Des Moines, Iowa. Included in the reports were three items of special interest; name of student-learner, name of employing firm and occupation for which student-learner had trained.

A letter requesting permission to conduct the research (see Appendix A) was sent to the superintendent of schools and the high school principal in each of the three cities. Permission was promptly granted in each case.

Table 1 shows the population from which the sample was drawn. The population was based on both first and second semester (T.I.-13) reports for the five-year period. It should be noted that potential interviews out-numbered cooperating employers. The reason for the difference was the fact that some cooperating employers helped train student-learners in more than one occupation. For example, an automobile dealer and his staff helped train auto mechanics, auto parts clerks and auto body repairmen. Thus it was appropriate to interview the service manager, the parts manager and the manager of the body shop.

The sample was selected using the following criteria:

(a) An employer must have been a cooperating employer for two or more of the school years, 1961-62 through 1965-66.

(b) The cooperating employer must have helped train two or more student-learners for a given occupation during the five-year period.

(c) At least one of the student-learners must have received training during the 1963-64 through 1965-66 school years. (This was specified in order to ensure recent experience in the program.)

Table 1. Population from which sample was drawn

Cities	Cooperating employers	Potential interviews	Student-learners
Ames	65	67	114
Marshalltown	40	46	88
Newton	52	59	108
Totals	157	172	310

Table 2. Selected sample

Cities	Cooperating employers	Potential interviews	Student-learners
Ames	23	24	59
Marshalltown	15	17	81
Newton	20	23	73
Totals	58	64	213

Table 2 shows the quantitative composition of the selected sample. There were 58 (37% of population) cooperating employers, 64 (37% of population) planned interviews and 213 (69% of population) student-learners in the sample. The most frequent reasons why cooperating employers did not qualify for inclusion in the research were: (a) no longer active in the industrial community, (b) participated only one year and then dropped out of the program, (c) had not participated since the 1962-63 school year, and (d) new to the program.

It was necessary to develop a list of cooperating employers who would be asked to participate in the research. Appropriate portions of the list were sent to each coordinator requesting the return of (a) firm address, (b) position and name of person to receive letter, and (c) supervisors and managers to be named in letter (persons other than the addressee who should be interviewed). The coordinator retained a copy of the list in order that letters of introduction could be sent from coordinator's office to appropriate employers. Each coordinator developed letters of introduction (see Appendix B) which were sent near the end of the 1965-66 school year.

The interview form was developed during a series of meetings with Professors of Industrial Education, Lowell L. Carver and Owen Shadle and during visits with each coordinator. The resulting form was typed and duplicated on 8½ inch by 11 inch sheets. It was pretested in a total of nine firms in Ames, Marshalltown and Newton. After minor changes, preparations were made to print the revised form (see Appendix C) on 8½ inch by 14 inch sheets. The larger sheets provided more space for recording comments made by the interviewee.

The letter from researcher to cooperating employer was developed during a series of meetings with Professor Owen Shadle. A form letter for each city was composed and then lithographed.

A schedule of interviews was developed. It was estimated that each interview would take 30 minutes; 75 minutes were allowed from the beginning of one to the beginning of the next interview.

The typist was supplied with form letters, carbon paper, copy paper, envelopes and appropriate instructions. Items of information supplied for inclusion in each individual letter were: (a) name and position of addressee, (b) name and adress of firm, (c) names of persons to be interviewed, (d) time and date of interview, and (e) names of student-learners whom firm had helped train during the past

five years. The completed letters (see Appendix D) were checked for proper entries and corrections were made. A partially completed confirmation form (see Appendix E) and stamped envelope (addressed to researcher) were enclosed with the letter.

Entered on the cover sheet of the interview form were: (a) name of cooperating employer, (b) city initial, (c) name of interviewee, (d) names of student-learners, (e) title of occupation for which they had trained, and (f) year that training had begun for each student-learner. Attached to the front of the interview form were the copy of the letter to the cooperating employer and the returned confirmation sheet. By following such a procedure, confirmed time of interview and cooperating employer's address were easily added to the interview form.

When reporting for an interview, it was standard procedure to meet first with the addressee if convenient for him. In some cases the addressee was the top administrator, general manager or a partner in the firm. The small amount of additional time necessary to meet the demands of such a policy was well invested. Time was undoubtedly saved in some cases and there was never an instance when anyone was placed in an embarrassing situation. In the majority of cases, addressee and interviewee were the same person.

The procedure followed during each interview was: (a) personal introductions, (b) a brief review of purpose for the interview, (c) check student-learners who were clearly remembered by the interviewee and record total number at bottom of sheet number 1, (d) request that interviewee keep in mind the age group and half-day status of student-learners, (e) briefly explain the terms, "outstanding", "good", "acceptable", "fair", "poor", and "NA/NO". (f) ask that each student-learner be designated for placement in the most appropriate column for each personal characteristic and each skill, (g) comments were welcomed and recorded at any time during the interview, (h) on the last two pages of the interview form, no necessity to identify differences in student-learners, (i) upon completion of the interview form, the invitation to express views of the current program and offer any suggestions for making improvements, and (j) when the interviewee seemed to have nothing additional to contribute, he was thanked for his time, observations and opinions and bid good-bye.

There were 191 student-learners evaluated in interviews. By a comparison between Table 2 and Table 3 it is evident that 22 student-learners in the sample were not evaluated. The most frequent reasons were (a) student-learner was not clearly remembered by interviewee, (b) student-learner had left school early in his senior year, (c) student-learner left firm early in school year because of unresolved problems, and (d) interviewee was employed by the firm since the training period of earlier student-learner.

A minimum of re-scheduling was required in efforts to reach the goal of completing all interviews in the sample. By a comparison between Table 2 and Table 3 it becomes evident that all planned interviews were completed.

Table 3. Completed interviews

Cities	Cooperating employers	Completed interviews	Student-learners
Ames	23	24	59
Marshalltown	15	17	68
Newton	20	23	64
Total	58	64	191

FINDINGS

The findings of this research were based on opinions and observations of cooperating employers[1]. Responses were recorded by the researcher during each of 64 personal interviews with 68 cooperating employers[2]. (Four interviews involved two Es in the firm, both having had experience with the same student-learners.) There were 191 former student-learners[3] evaluated during the interviews. There were from one to ten S-Ls per interview with an average of nearly three. The S-Ls were trained in 36 occupational classifications. A list of these classifications follows:

Building trades and related - 26 Carpenter, 2; civil engineering aide, 1; concrete production, 3; draftsman, 10; heating, air conditioning and refrigeration mechanic, 2; lumberman, 4; plumber, 2; and tile and carpet layer, 2.

Foods and beverages - 16 Beverage production, 7; cook, 2; and meat cutter, 7.

Health services - 18 Dental assistant, 2; hospital orderly, 1; laboratory technician, 4; nurses aide, 10; X-ray laboratory technician, 1.

Manufacturing and related - 31 Concrete products manufacture, 3; mail and stockroom clerk, 6; plastics fabricator, 6; shop clerk, 5; tool and die (die casting), 9; and tool grinder, 2.

Printing and publishing - 11 Printing and publication, circulation, 2; and printer, 9.

Services (not otherwise classified) - 21 Appliance repairman, 4; dry cleaner, 2; electric motor repair, 2; key punch machine operator, 6; radio and T.V. repairman, 4; and typewriter repairman, 3.

Transportation services - 68 Auto body and fender repairman, 16; auto maintenance mechanic, 7; automatic transmission mechanic, 2; auto mechanic, 29; auto parts clerk, 12; and radiator repairman, 2.

Findings have been divided into three major sections. The first two relate to evaluations of S-Ls' personal characteristics and skills. The third section relates to Es' evaluation of the program.

Es were encouraged to comment freely during interviews. Comments were recorded quite accurately and were considered to be an important part of the findings. To report each comment individually would have involved too much space and too much of the reader's time, so attempts were made to report only those remarks which were most noteworthy.

As reported herein, when two or more Es made virtually the same comment, the quote was followed by a dash (-) and a numeral denoting the number of Es making the comment. For the sake of brevity, phrases have frequently been used instead of complete sentences.

Each S-L was rated on 19 personal characteristics and 16 skill related items. There were six possible positions on each item. (See Appendix C) In treating the data, each of the positions was assigned a multiplier; outstanding x 4, good x 3, acceptable x 2, fair x 1, poor x 0 and NA/NO (not acceptable or not observed) x 1. The data for each item was treated with the formula:

---

[1]Refer to definitions.
[2]Hereafter referred to as Es.
[3]Hereafter referred to as S-Ls.

$$\frac{o4 + g3 + a2 + f}{(191 - NA/NO)\ 4} \times 100 = \text{weighted score}$$

To illustrate the use of the formula, the data for the characteristic of judgement have been used (see Table 4).

$$\frac{12.4 + 58.3 + 40.2 + 38}{(191 - 33)\ 4} \times 100 = 53.8$$

Weighted score ranges for positions "poor" through "outstanding" were as follows: poor, 0 - 12.5; fair, 12.6 - 37.5; acceptable, 37.6 - 62.5; good, 62.6 - 87.5; and outstanding, 87.6 - 100.

For each of the 35 items in the first two sections, the item has been stated as shown on the interview form, then the interpretation (shown in parentheses) of the item as presented to Es during interviews, some reference to information in the table and then comments made by Es have been shown in quotes.

Personal Characteristics

Table 4 on the following two pages shows personal characteristics arranged by descending weighted scores. The higher the score, the more favorably ranked by Es. Other items shown in Table 4 are frequency totals for each of the six positions and the percentage of S-Ls on which the weighted score was based.

Loyalty to employer (absence of action which would tend to devaluate the firm in any manner) was placed at the top of the list with a weighted score of 73.4 based on all the S-Ls. Only four S-Ls received marks of fair or below. "Actually helped the business" and "patronized a competitors business".

Choice of language (absence of elements, such as profanity, which could cause embarrassment for the firm) was found to be fair or poor for only six per cent of all S-Ls. "Reflected in the home environment", "lacked control of temper", "obscene at times", "standards were made clear at beginning and there were no problems at any time" and "became progressively more profane:.

Concern for others' safety (absence of 'practical jokes', doesn't leave unnecessary hazards in work area) was measured on all but three per cent of the 191 S-Ls. There were 170 considered to be mid-range or above. "Get extensive orientation and close supervision; response very good" - 2, "a near miss; lesson learned", and "fail to handle motor vehicles in a sensible manner" - 4.

Concern for others' feelings (is tactful, compliments with sincerity, sensitive to needs of others) was not observed in the case of 13 S-Ls. "Overly tactful, very modest", "seemed to feel awkward", "immature, generally insensitive", "failure to think before talking", and "a habitual 'wise-cracker'".

Cheerfulness (seems to enjoy work and fellow workers) was in excess of five points below first place. "Very energetic" - 4, "enjoyed people", "very agreeable", "personality plus", "increased with maturity", "knows how to smile and practices", "moody" - 4, "somber" - 3, and "sense of responsibility seems imcompatible with joy of productivity".

Observance of rules, regulations, and policies (whether posted or verbally presented) was not applicable or not observed in eight cased. "Policy not dictated", "stressed at beginning and no problems", and "took three or four months to satisfactorily achieve".

Punctuality (arrives before actual starting time; willing to remain a few minutes to finish a job) was a source of difficulty for approximately 17 per cent of S-Ls. "Always early and would stay after

Table 4. Numerical summary of personal characteristics

Personal characteristics	Weighted score	NA/NO[1]	Per cent of S-Ls evaluated
Loyalty	73.4	0	100

Appreciation, time	27	93	27	24	20
Oral communication, clear	16	97	27	29	11
Confidence	14	83	40	38	11
Listener	24	86	25	27	29
Judgement	12	58	40	38	10

if needed", "continued work in summer and occasionally overslept", "seemed slow in returning from errands", "wouldn't notify employer of expected absence" - 2 and "slight illness and he'd stay home; adjustment problems" - 2.

Appreciation for costs other than time (effective use of materials, supplies, facilities; not wasteful) was considered by one E to be "management's responsibility". "Wanted to make up for losses due to errors", "good general concern" - 2, "developed an appreciation", "tool losses due to carelessness", "general lack of realization in this area", and "awkwardness resulted in some losses".

Clothing selection (appropriate to the work activity) did not apply in 15 per cent of the cases because of uniforms. "Neat", "had to be reminded occasionally", "had to be advised and then improved" - 5, "improved with time and finances" - 4, and "poor dresser".

Acceptance of constructive criticism (gratefully received and utilized to make improvements) was a source of difficulty for at least 15 per cent. "Never needed criticism", "prefer S-L ask again if in doubt", "took time to develop:, "okay except when it came to clothing and grooming", and "failed to apply after apparently getting the message" - 2.

Customer relations (is courteous, builds good will) applied to only 60 per cent of the situations in which S-Ls worked. "Offered extra service", "very important part of the job", "meets people and adjusts to environment", "responsibility given directly to boy; best way to learn", "okay when he felt like it", and "too backward and shy; a know family trait".

Grooming (clean body, haircut, shave, clothing satisfactorily maintained) placed twelfth. "Had to be advised and then improved" - 3, "not clean shaven", "acne problem", and "problem with hair and 'beetle' influence" - 4.

Pride of accomplishment (takes pleasure in doing a good job) was at least acceptable to Es in four out of five cases. "Liked to receive compliments", "progressive improvement" - 2, "being too much of a perfectionist slowed him down too much", "may take pride but didn't express pleasure" - 2, "somewhat sloppy", "seemed to deteriorate with time", "didn't care about being expert" - 2, and "a general lack of this in trades in general; poor examples set by workers on big jobs especially".

Dependability (trustworthy, reliable) was a source of some difficulty for at least 20 per cent. "S-Ls are honest", "steady", "good helpers but unable to function alone", "problem of honesty with company property by people who are above reproach on personal basis", "frequent absence without prior notice", "a boy dismissed on this matter", "trouble with the law" - 2, and "was caught lying on two or more occasions" - 2.

Appreciation for the value of time (involved in productive or learning activities; no 'goofing off') was considered by Es to be weak or lacking in at least 23 per cent of the S-Ls. "Seeks out something to do on his own" - 2, "okay with close supervision, poor without it", "worked too fast; quality suffered", "had certain duties to perform in a given time; no chance for 'buck-passing'", "somewhat slow", "a 60 per cent tendency to 'goof-off'", "a loafer", "couldn't find anything to do if not specifically assigned" - 2, "completely unacceptable in this respect" - 2, and "fail to understand that they have to make money for the firm".

Oral communications; clear, concise (makes point without wasted words; talks too much? too quiet?) were important enough to be observed in 94 per cent of the cases. Over 22 per cent were rated fair and poor. "Outstanding because he wanted to know 'why' when it was appropriate", "lacked nerve", "speech handicap; couldn't present himself" - 2, "tends to interrupt conversations", "failure to communicate to supervisor, any ideas for improvement in the work situation" - 2, "talk interferred with production of work" - 2, "too quiet" - 18, and "too talkative" - 11.

Confidence, poise (appropriate level) was considered to be a weakness in at least 26 per cent of S-Ls. "Reasonable about possessed knowledge and capacities", "improved with maturity" - 2, "bashful; reflected in work", "six months before an adequate level was reached", " a little backward and shy at beginning" - 3, "self-conscious as result of kidding by regular employees, but no problem", "self-conscious of an extreme sinus condition", "failed to try to know customers", "lacked confidence" - 14, and "over-confident" - 8.

Attentiveness; listener (gets message the first time when clearly presented; makes notes of more complex instructions) was considered by Es to be no better than fair for about 30 per cent of all S-Ls. "Show him once and he had it", "learns quickly, retains well", "developed better habits" - 2, "poor at remembering and taking notes" - 2, "wouldn't direct his attention" - 2, "slow to comprehend", "lack of nomenclature a handicap", "failed to make notes", "had to be told repeatedly", "lack of interest exhibited" - 2, "general lack of ability to receive and follow instructions.

Judgement (displays appropriate initiative and makes responsible decisions) placed last and was based on 83 per cent of the S-Ls. Even so 37 per cent were considered to be good and outstanding. "A draftsman needs a high degree of this", "not yet in a position to make decisions; only to carry them out", "six to nine months before this developed to a satisfactory level" - 3, "hesitant to venture out and make a decision" - 2, "immature; asks all the time" - 2, "lack of consideration for dollars and cents", "squelched by a domineering father", and "lacked home training and encouragement in the acceptance of responsibilities" - 2.

Skills

Table 5 shows 16 S-L skills arranged by descending weighted scores. Other items shown in the table on the following two pages are frequency totals for each of the six positions and the percentage of S-Ls on which the score was based. Four of the skills evaluations were based on 85 per cent or more of the S-Ls.

Familiarity with equipment; last of training period (knowledge about and evidence of experience with tools and machines) ranked at top position with a score of 72.2. Only 38 S-Ls were designated below 'good'. "Level depends on S-L" and "failed to apply himself".

Composition of written reports (organization and correctness of expression) was based on only seven S-Ls. This skill was little used by S-Ls. It was indicated, however, that a greater need for composition skills would accompany advancement in most of the occupations. "Exhibited some creative ability" and "one S-L recorded telephone messages very effectively, another experienced almost complete failure in the task".

Vocabulary as applied to trade or job; last of training period (correct terms used when referring to objects or processes) was con-

Table 5. Numerical summary of skills

Skill	Weighted score	NA/NO[1]	Per cent of S-Ls evaluated
Familiarity with equipment; last of period	72.2	12	94
Composition of written reports	71.4	184	4

sidered to be good or outstanding for 144 S-Ls. "Didn't really care, very little gain".

Selection of tools and equipment (chosen appropriate to the task or job) was not applicable or was not observed in 35 per cent of the S-Ls. In those cases the E indicated that it would be difficult to select the wrong tool or machine for a given task. "Followed the good policy of asking questions when confronted with unfamiliar situations".

Tool and equipment safety (kept safety in mind during use and maintenance) was considered to be good or outstanding in 135 cases. "Made good use of what he learned in school", "was stressed and results were good" - 3, "careless in the proper use of electric power tools" - 2, "not enough concern about personal safety" - 2, "problems at the beginning, had to be cautioned" - 3, and "mishandled automotive equipment" - 4.

Familiarity with equipment; growth rate during year (rate of becoming proficient with tools and equipment) ranked sixth with a score of 67.2. "Depends on S-L's drive", "lack of interest hampered growth", "seemed to fade near end of training period", and "lacked aggressiveness".

Related mathematics and science (proficiency in handling money, measuring, computing; knowledge of chemical and physical properties of materials) was rated on 69 per cent of S-Ls. "Had good math and science background which helped him in his work", "developed accuracy in inventory control", "picked up what he needed and remembered it", "lacked practice in handling money and making change", "forgets through lack of practice", "weak in math and use of measuring devices" - 5, "can't read a common rule" - 2, and "lacked understanding of laws of motion, needed physics" - 2.

Quality of work (relationship to minimum standards) ranked eighth with 98 per cent being evaluated. "Applied what he learned", "demonstrated care", "two measures of skill are speed and accuracy", "had to be instructed repeatedly", "slow", "clumsy, awkward" - 2, and "failed to follow instructions; work suffered".

Ability to read blueprints and sketches was a factor in 41 per cent of the cases. The percentage would reportedly have risen as S-Ls progressed farther into the occupations. "Used parts manual effectively", "S-L's interest determines extent of involvement with plans" and "definitely need mechanical drawing and blueprint reading in this line of work" - 3.

Budgeting of time (efficiency in planning and using time) was experienced by 42 per cent of S-Ls. The majority had no occasion to personally plan and use blocks of time. "Gives a full day's work", "one of the more important things" - 2, "inefficiency seems to be intentional at times" - 2 and "finishes a task and then fails to move ahead unless specifically assigned" - 2.

Ability to adjust to new techniques, ideas and situations (adaptability; willingness to do a task in an unfamiliar manner; improvises when necessary and appropriate) was judged to be good or outstanding for 100 S-Ls. "Open-minded", "wisely seeks answers to difficult or unusual problems", "there are times when individual has to decide, right or wrong; earlier practice helpful", "lack of confidence", "tend to be impractical", "a production worker, not a designer or a problem-solver" - 5, "S-Ls fail to provide suggestions", "takes at least five months to begin changing from follower to problem-solver" - 3, and "S-Ls seem to feel nobody should be telling them what to do".

Legibility (readibility by others) was an observed factor in 55 per cent of the cases. There were over 20 points between the top ranked skill and legibility. "Doing drafting and is outstanding", "showing improvement", "wish every boy could take drafting", "draftsmen often

hired on basis of lettering only", "sad situation, terrible" - 4, "weak on use of guidelines", and "what happened to penmanship?"

Maintenance and care of tools and equipment (organized and cared for in the interest of efficiency) received a weighted score of 51.8 based on 85 per cent of the S-Ls. "Problems at the beginning only", "general problems in this area with most workers", "needed to be repeatedly reminded to clean up work area" - 3, "least cooperation in this area" - 2, and "tools were left where last used" - 3.

Spelling was based on 42 per cent and can be considered to be at the bottom of the list in view of Es' limited expectations of S-L's vocabulary at first of training period and familiarity with equipment at the first of training period, the lowest ranking items on the list of skills. "Showed good improvement" and "lousy" - 3. Several Es merely shook their heads in dismay.

Vocabulary as applied to trade or job; first of training period (correct terms used when referring to objects or processes) was good in 19 cases. Es were not particularly concerned with the status of terminology in the initial stages of experience. "Course in electricity during junior year had definitely helped", "still developing at the end of nine months", "automotive terms a pre-requisite; have to work from descriptions", "more chemistry and biology would help the medical lab technician", "graphic arts would be helpful", and "all new, much to learn at first" - 4.

Familiarity with equipment; first of training period (knowledge about and evidence of experience with tools and machines) was outstanding in three cases and poor in 90 cases. Predominance of low ratings aroused little concern on the part of Es. "Very good mechanical ability from the start", "equipment in industry frequently more sophisticated than in school", "acquainted with only a few tools of the trade" - 2, "would be helpful to have some prior training in foods, foods processing and meat cutting", and "too familiar with equipment at the beginning in some cases".

Evaluation of the Program

Cooperating employers[1] were asked to respond to this section of the interview on the basis of total experience with the program. No references were made to individual student-learners so N equalled 64. Comments made by Es have been divided into four categories and have been coded by a letter in parentheses; (0) observations, (s) strengths, (w) weaknesses and (r) recommendations.

Selection and placement of student-learners[2] was considered to be at least 'good' by over 68 per cent of the Es. Table 6 shows the responses. (0) "Takes two to four weeks to determine which S-Ls really want to learn the trade", "looked good but fizzled" and "money a matter of too much concern among S-Ls". (s) "Late fall of junior year, coordinator[3] brings interested S-Ls to us for orientation visit", "yearly improvement has been evident", "C has real insight and perception", "we find a boy and then if possible arrange with C to enter him as a S-L in the program" and "was a reject from another E but S-L worked out okay". (w) "C did best anyone could, considering S-Ls available to work with" - 2, "S-Ls either lacked goals or the drive to reach them" - 2 and "S-L just wanted out of the classroom". (r) "Would like to participate in orientation to the occupation", "early planning

[2]Hereafter referred to as S-Ls.
[3]Hereafter referred to as C.

is helpful", "would like to have potential S-Ls come for interview in latter part of junior year", " desirable to have two or three S-Ls to choose from" - 2, "C needs to be sure S-L interested in the type of work before initial interview with E" and "would help to have more personal background on S-L before initial interview".

Table 6. Effectiveness of selection and placement

Response	N	Per cent
Outstanding	9	14.1
Good	35	54.7
Acceptable	8	12.5
Fair	5	7.8
Poor	2	3.1
NA/NO	5	7.8
Total	64	100.0

Quantity and importance of communications from C were considered by nearly all Es to be just right and restricted to "necessities only". See Tables 7 and 8. (s) "Was kept well informed about S-L's work in related class: and "appreciated prior notice of absences". (w) "Some communications were pointless".

Table 7. Quantity of communications from coordinator

Response	N	Per cent
Too many	0	0.0
Just right	62	96.9
Too few	2	3.1
Total	64	100.0

Table 8. Importance of communications from coordinator

Response	N	Per cent
Necessities only	62	96.9
Usually needed	2	3.1
Often not needed	0	0.0
Total	64	100.0

Coordinator visits in relation to desired frequency were considered by 84.4 per cent to be 'just right' (see Table 9). The estimated frequency of visits was one every nine to twelve weeks according to 39.1 per cent of Es. Table 10 shows 28.1 per cent estimating one or more C visits per month. Over 67 per cent of Es ranked C visits of at least 'high' value. (See Table 11). "Came only at end of grading periods" - 2 and "seem to boost C's moral" - 2. (s) "Helped S-Ls to know of C's interest in them" - 3, "instrumental in helping S-Ls with personal problems" - 7, "valuable visit about S-L prior to initial interview with S-L" and "C inquired about material appropriate for S-L to study in related class". (w) "S-L rating scale could have been completed by phone", "scheduling visits was somewhat of a problem", "S-L tensed up when C came" and "C made no particular contribution". (r) "Greater value could be derived if C would visit frankly with S-L prior to visiting with E".

Related instruction was not evaluated by 42.2 per cent of Es because they felt they had no real evidence on which to base an evaluation. Table 12 shows 34.4 per cent ranking the value of instruction as 'high' and 'very high'. (o) "Much depends on the individual S-L" - 12 and "S-L took correspondence course in electronics". (s) "S-L asked for literature and training helps" - 7, "E set up problems for S-L to work on during off-duty hours" and "flexible, versatile". (w) "Evidence is scarce". (r) "Favor close working relationship between C and E in planning instruction" - 3.

The per cent of processes (involved in the occupation) experienced by S-Ls has been shown in Table 13. This item was designed to measure the scope of S-Ls' experience in the occupation. Over half the Es indicated that S-Ls had experienced at least 70 per cent of the processes. (o) "Depends on S-L drive". (w) "Es either do not have or do not take enough time to teach S-Ls".

Supervision of S-L performance near the end of the training period was measured to determine proficiency levels developed in the various processes. For example, an E reports that S-Ls experienced 70 per cent of the processes. He indicates that his S-Ls performed 40 per cent of the processes with "little or no supervision" and another 30 per cent with "moderate to close supervision". He said in effect that S-Ls have experienced seven-tenths of the processes or jobs involved in the occupation. Four-tenths of the processes have been repeated enough times so that the S-L can do them with a

high level of competence. Three-tenths of the jobs have been done seldom and therefore demand a greater degree of supervision.

Due to the fact that Es could select percentages in any one or all levels of supervision, there was no way of controlling N which turned out to be 115. As seen in Table 14, based on medians, a typical S-L could perform 40 per cent of the processes with "little or no supervision"; the balance of the processes performed called for closer supervision. Whereas the previous item was designed to measure the scope of S-Ls' experience, this item has been designed to measure the depth of experience in the jobs or processes.

Es were asked what per cent of S-L graduates were sufficiently trained to be hired full-time by the firm if openings existed. Table 15 shows the results with 65 per cent of Es reporting 60 per cent to 100 per cent of S-Ls suitable for full-time positions at the time of graduation. Over twenty-three per cent indicated that all their S-Ls were suitable for full time employment.

Table 14. Supervision of student-learners' performance of processes near end of training period

When asked to establish the level of employment for which S-Ls were competent at the end of the nine months, most Es stated the apprenticeship status which they felt their typical S-L had attained. Table 16 shows the typical S-L to be placed in the six to nine month range. The actual work time of S-Ls averages nearly five months as a result of work during vacations and some week-end work. Over one-fourth of the Es who reported apprenticeship status felt that S-Ls had earned twelve months credit toward completion of apprenticeship.

Table 16. Number of months credit toward completion of apprenticeship at the end of nine months as student-learner

Response (months)	N	Per cent

No response	21	32.8
Total	64	100.0

Forty-one Es stated the additional apprenticeship time which seemed appropriate for their typical S-L. The median number of months was 18 with a range of zero to 66. See Table 17.

Cooperating employers were asked to share any other thoughts on the program. The responses were classified as observations, strengths, weaknesses and recommendations.

Student-learners were observed "to enjoy E's personal interest", "to be frequently superior to graduates of commercial trade schools", "to succeed in direct proportion to their level of interest" - 2, "to bring their personal problems to work" - 4 and "to learn more through observation than through intensive instruction". "If S-L's long term goals could be made known, E could probably be of more help". "A S-L's home tends either to support or destroy him" - 10. "S-Ls are selected by E on basis of performance tests". "High schools are not geared to the needs of many youth; too much emphasis on college prepa-

ration" - 3. "Some parents feel Es provide a really significant service to S-Ls" - 2. "Factory schools are best for some phases of training" - 2. "Es are providing a service to the community; S-Ls are not needed". "A mechanic's incentive pay tends to cause him to ignore the S-L. If the mechanic could profit directly from the S-L's production, training would likely improve."

Nineteen Es stated that the program was 'very good'. "Excellent way to explore an occupatipn" - 8. "An effective means of becoming oriented to work" - 3. "Affords valuable experience in money management" - 2. "Helps keep students in school" - 2. "S-Ls seemed to learn more in nine months than in the other three years of high school combined" - 2. "The program provided E with the opportunity to help those who really wanted to help themselves" - 3.

Several weaknesses took the form of student-learner shortcomings. "Lack of appreciation for ethical standards" - 3, "fail to realize that there are rules to live by in all of life" - 2, "fail to organize thoughts and think things out for themselves" - 4, "seem to be unable to remember names and faces of regular customers" - 2, "lack understanding of the technology with which they're rather closely related" - 2 and "exhibited less interest near end of school year" - 2. "The program is not serving enough people; needs to be expanded". "The coordinator is not sufficiently critical of the training outline and is too hesitant to see that outline is followed by cooperating employer". "It became evident that S-Ls took the program just to get out of the classroom" - 10. "S-L can't gain much in nine months on a half-day basis" - 3. "Some parents seem to feel S-Ls are being exploited by Es" - 3. "Communications between parents and Es are inadequate to non-existent" - 2.

Recommendations were numerous and varied. "Public relations is a responsibility of the school" - 2. "Need more community support for vocational-technical education" - 4. "Communications between trade schools, industries and local schools are important."

Education prior to senior year was a concern. "Need industrial arts courses in plastics, auto mechanics, drafting and blueprint reading" - 7. "Need vocational auto mechanics" - 3. "Ability to type would be an asset to the draftsman trainee" - 4. "A good course in electronics should be taken prior to training as a radio and television repairman". "Woodworking course should precede carpentry training". "The auto body repairman needs practice in oxy-acetylene and arc welding". "Youth need practice in working for themselves, thinking for themselves and solving their own problems".

Student-learners could profit from certain additional knowledge and further understandings. "Need to be convinced of the importance of having a well developed skill". "Should know that they are expected to work and learn for the whole of each school day at least". "Should be well aware of the strict standards of the job prior to first day of duty". "Not worth their pay at the beginning of the training period". "Desire to learn should be primary; paycheck should be secondary" - 4.

"Employers should be advised on the wage-hour act" - 3. "Every employer should provide training for high school youth" - 3. "When applicable, E should check out a complete tool kit to S-L and make him personally and financially responsible for it" - 2.

Communications were of some concern. "Employer, student, parent and coordinator should each have a copy of the signed agreement[1]".

---

[1]Refer to definitions.

"Need occasional three-way conversation between S-L, E and C" - 2. "Consider revision of the S-L evaluation form". "S-Ls should see evaluations of themselves". "S-L, E and C should critically evaluate the training outline near the end of the school year; then compare their findings".

Three employers felt that "Students should be permitted to enter the program as sophomores". "Extend the program to juniors, permitting an individual to take two years" - 2. "First semester should be considered a trial period to determine whether S-L continues or returns to school full-time during second semester" - 2. "In late spring, senior S-Ls should meet with juniors who are planning to be S-Ls".

Employers were asked for opinions concerning the feasibility of operating a program during summer months. Some were not prepared to advance an opinion; others were. "Favor operating a coordinated summer program between junior and senior year for trial and screening purposes, plus adding valuable training time" - 32. "Prefer operation during summer after senior year" - 4. "Would oppose operation of summer program" - 5. "During summer, coordinator should be 'employed' in positions held by S-Ls during the school year; he would then be better equipped to advise and instruct".

"Some S-Ls need to be training for positions as managers of produce (fresh fruits and vegetables) departments". Only one of the 68 Es objected to vocational education at the high school level; "Students should be restricted to general education with no vocational education until after high school". Thus the conclusion of cooperating employers' recommendations and comments pertaining to the part-time cooperative industrial education program.

DISCUSSION

The specific objectives of this research have served to guide the research activity and have been used as sub-headings in the following discussion.

An objective of this research activity was to design an instrument for the purpose of gathering research data (observations, opinions) from cooperating employers[1]. The types of instruments considered were questionnaire and interview form; the latter was selected. Two items on the first sheet of the form were not really utilized. The "year of (interviewee's) initial employment with firm" and his "position at that time" were left blank in the case of owners and firm managers, so nothing was done with that particular data collected during other interviews. Had the researcher wisely interviewed each E on the foregoing two items, the results would have surely been impressive. It was quite evident that S-Ls[2] had been trained and supervised by Es who were experienced and well qualified in their specific occupations.

Most of the personal characteristics and skills items on the second and third sheets were quite functional. In reference to skills, it may have been helpful to sub-divide "Related math and science" and to omit "Familiarity with equipment; growth rate during year". The term "acceptable", appearing on sheets two, three and four, was probably not as appropriate as the term "mediocre" would have been. In reference to the last item on sheet number four, the choice, "occasional supervision" was not effective and should have been deleted. Such a deletion would have improved Table 14 and probably would have helped the entire item.

The per cent of processes experienced by S-Ls and the proficiency with which S-Ls performed the processes, seemed to be measured adequately. These items were, however, most difficult for Es to respond to. Answers were given in the form of estimates after long, thoughtfilled pauses. The difficulty may have been caused by a weakness in the design of the interview form or by the fact that most Es were not prepared to respond to such an item. The interview form was functional; however, certain revisions would have likely increased its effectiveness.

A second objective was to enlist cooperating employers as evaluators of S-Ls and as evaluators of the program. Sixty-eight Es proved their courteous cooperation by freely providing observations, opinions, evaluations and recommendations. The term "cooperating employers" was found to be most descriptive. Thanks to Es, this objective was thoroughly fulfilled.

Another objective; to identify personal characteristics displayed by student-learners. In view of the time and efforts expended by Es in training and supervising S-Ls, no one else could have been in a better position to observe personal qualities or characteristics. The responses made it clear that Es observed with interest and were willing to share their observations. The findings made it clear that Es were generally satisfied with most S-Ls on most of the characteristics named. Among the weaker characteristics were a lack of appreciation for the value of time and difficulties with communications especially with listening. E's comments were of considerably greater interest to this researcher than were the numerical data pertaining

---

[1]Hereafter referred to as Es.

[2]Student-learners.

to the nineteen separate items.

A fourth objective was to identify skills demonstrated by S-Ls. As with personal characteristics, Es were in a position to observe and they cooperated fully by sharing their evaluations of S-Ls' skill related activities. Comments were a valuable part of the responses.

Among the weaker skills were "legibility", "spelling" and "maintenance and care of tools and equipment".

A further objective of this research was to identify the most significant strengths of the program. Most aspects of the program were considered by Es to be quite satisfactory. There seemed to be no particular aspects of the program which could be construed as "the most significant strengths".

A sixth objective was to detect any observed weakness and the final objective was to reveal suggested procedures which may be employed to increase program effectiveness. Es were interested in the selection and placement of S-Ls and considered this phase of the program to be "good". They indicated a desire to help with orientation and encouraged the completion of most planning in the spring before the arrival of S-Ls in the fall.

Communications and visits by the coordinator[1] were satisfactory in nearly every instance; however, there was some indication that more frequent visits would be desirable.

After considerable hesitation, most Es responded to the items pertaining to the per cent of processes (involved in the occupation) experienced by S-Ls and proficiency of S-L performance. It was observed that Es seemed to have no clear-cut idea of the number of separate jobs or processes involved in the occupation, nor did they have a good basis for percentage estimates. Based on these observations and on comments made by Es, it would seem that several useful purposes could be served by E and C jointly developing a list of terms pertinent to the occupation, a tool and equipment list, and a list of jobs and processes performed in the E's establishment. The three lists could serve as aids in: the development or revision of an on-the-job training outline; developing an orientation to the occupation; planning specific related instruction; the development of checklists designed to help chart a S-L's progress in the occupation.

Nearly one-fourth of the Es indicated that all their S-Ls were suitable for full-time employment at the time of graduation. Over forty per cent indicated 60 to 90 per cent of their S-Ls to be suitable. In many cases, S-Ls had been offered a full time position in the occupation, but left for more money elsewhere. Es believed that S-Ls would do well to complete their apprenticeship, accept a lower income for a short time and consider the difference in earnings during that time to be a low-cost investment in a valuable and practical part of their education. Es seemed to feel that educators and parents could help S-Ls to make more realistic decisions in regard to employment and training.

On the basis of interviews with cooperating employers, the following conclusions have been drawn by the researcher.

1. Part-time cooperative industrial education programs have been providing a valuable service to the communities in which they serve.
2. There is opportunity to increase the effectiveness of the program.
3. Cooperating employers are interested in helping to make programs as effective as possible.

---

[1]Hereafter referred to as C.

4. Cooperating employers are an excellent source of data. Such data will surely be a vital element in future research of the program.

On the basis of this research, the following recommendations were made.

1. Effective research of programs is the best means of providing information which will serve as an aid to planning even more effective programs. Since cooperating employers are interested in more effective programs and have chosen to be cooperative in research activity, more research should be planned with Es playing a major role.
2. The merits of a coordinated summer program should be studied carefully, in view of the fact that over 50 per cent of the Es felt there were benefits to be derived from such a program.
3. The advantages of placing a coordinator on an eleven or twelve month contract should be enumerated and given careful consideration. (To suggest just a few possibilities: planning and conducting research; coordinating a summer program; working jointly with employers to develop or revise training outlines; plan or revise specific related instruction; visit and study industries and assess the demands placed on workers in various industries and trades.
4. Educators, employers, students and parents have each been referred to in comments made by cooperating employers. Each group should be made aware of comments that are applicable, so that implications of strengths may serve to encourage further strengthening. Suggested weaknesses should serve to stimulate thought and actions designed to create strength where once it was lacking.

SUMMARY

Data were collected during 64 personal interviews with cooperating employers in the cities of Ames, Marshalltown and Newton, Iowa. Attention was first of all directed to 191 student-learners who were clearly remembered by the employers. Each employer was asked to evaluate each remembered student-learner on 19 personal characteristics and 16 skill related items. The employer was then asked to evaluate the part-time cooperative industrial education program on the basis of his total experience with it. Comments were welcomed at any point during the interview. As a result, comments became an important part of the findings.

For each student-learner[1], the cooperating employer[2] named one of six positions for each personal characteristic and each skill. Five of the positions were represented by numbers zero through four; zero denoted 'poor', four represented 'outstanding'. The sixth position was chosen when E had, for any reason, been unable to evaluate the S-L on a given item. Data were treated in order that a weighted score could be obtained for each item. The range of scores for the zero position, 0 - 12.5; for one, 12.5 - 37.5; for two, 37.5 - 62.5; for three, scores of 62.5 - 87.5 and for top position, 87.5 - 100.

Top ranking of the personal characteristics was "loyalty to employer" at 73.4, followed by "choice of language", "concern for others' feelings" and "cheerfulness". At the weighted score of 67.8 was "observance of rules, regulations and policies", then "punctuality". "Appreciation for costs other than time", "clothing selection", "acceptance of constructive criticism" and "customer relations" followed. "Grooming" placed at 65.3, then "pride of accomplishment" and "dependability". Falling into the middle range (37.5 to 62.5) was "appreciation for the value of time", followed by "oral (spoken) communications", "confidence, poise" and "attentiveness as a listener". "Judgement" came in last with a score of 53.8; still in the upper half of mid-range.

Sixteen skill related items ranged from 72.2 to 21.9. Topping the list was "familiarity with equipment; last of training period". Only four per cent of the S-Ls were involved in "composition of written reports". At 70.1 was "vocabulary, last of training period" followed by "selection of tools and equipment", "safety with tools and equipment", "rate of becoming familiar with equipment" and "related math and science". "Quality of work" scored at 64.4, then "ability to read blueprints, sketches", "budgeting of time" and "ability to adjust to new techniques, etc.". Ranking near the bottom with weighted scores of 51.9 to 51.6 were "legibility", "maintenance and care of tools and equipment" and "spelling". The last three items aroused considerable concern among many of the Es. At the very bottom of the skill related items were "vocabulary as applied to trade or job, first of training period" and "familiarity with equipment, first of training period". Lower ranks on the last two items caused little concern on the part of Es.

One of the aspects of program operation which Es were asked to evaluate was selection and placement of S-Ls. Most Es were pleased with that phase of operation and indicated a willingness to help; especially with orientation to a specific occupation.

---

[1]Hereafter referred to as S-L.
[2]Hereafter referred to as E.

Communications and visits by coordinators were considered by most Es to be important and about right in frequency and number. Even so, some of the comments suggested means of improving this aspect of the program.

Over 42 per cent of the Es had difficulty evaluating related instruction, stating that they had little or no evidence on which to base an evaluation. A 'high' value was assigned by 32.8 per cent of Es. In several cases it was stated that much of the value of related instruction depends on the individual S-L. A close working relationship between coordinator and employer was favored.

An attempt was made to determine the scope of S-L experiences in the occupation for which training was being given. As stated by over half the Es, S-Ls experienced at least 70 per cent of the processes involved in an occupation. Es felt that the scope of experiences depends largely on S-L drive and E's time and interest. In an attempt to determine S-L proficiency in the various processes experienced, Es were asked to indicate the supervision necessary near the end of the training period. The typical S-L could, with little or no supervision, perform four-sevenths (57.1 per cent) of the processes he had experienced. The balance required supervision ranging from occasional to close.

Sixty-five per cent of the Es reported that 60 to 100 per cent of their S-Ls were suitable for full-time positions at the time of graduation. Nearly one-fourth of the Es indicated that all their S-Ls were employable on a full-time basis.

In establishing the level of employment for which S-Ls were competent, most Es stated an apprenticeship equivalency of six to nine months. The typical S-L would need eighteen months of additional training to complete his apprenticeship.

Comments relative to program strengths, weaknesses and recommendations for an improved program were varied and numerous. There was good support for a strong and comprehensive industrial education program in the secondary schools. Es recommended an effective program of orientation prior to entry into training on the job. Communications was one of the areas which received frequent attention in the recommendations.

Some of the Es were in favor of making the program available to students in an earlier grade and providing opportunity for more than one school year's participation per student. Over 50 per cent of the Es favored operation of a coordinator supervised summer program for purposes of screening S-Ls and gaining additional training time.

ACKNOWLEDGEMENTS

Three coordinators of part-time cooperative industrial education programs provided elements which were essential to this research. Leonard Bengtson of Ames, Francis Burnham of Marshalltown and Clarence Beavers of Newton each expressed support of the planned research. They supplied encouragement and offered assistance in whatever measure it was requested. They assisted in the design of the interview form, provided copies of T.I.-13s and supplied other necessary information. They developed and sent letters of introduction to cooperating employers; thus, the researcher was courteously received at every turn. Clarence, Francis and Leonard helped make the summer of 1966 one of the most stimulating and informative ever experienced by the researcher.

Cooperating employers were not individually named in this report; however, they will long be remembered for their sincere interest in youth and for their desire to help plan programs which truly serve the needs of youth and the community.

Patience and cooperation were supplied by the researcher's wife and four daughters. Such contributions were certainly appreciated.

APPENDIX A

May 23, 1966

Donald D. Dunlavy, Superintendent
Newton Community Schools
807 South 6th Ave. West
Newton, Iowa 50208

Dear Mr. Dunlavy:

I seek your permission to conduct a study of part-time cooperative industrial education in Newton this summer.

Clarence Beavers is quite familiar with the work that has been done to date and has contributed some valuable ideas. Lowell Carver, Owen Shadle and others on the staff at Iowa State University have been serving in an advisory capacity.

The study is designed to describe the program from the employer's point of view; the "employers" being those who have participated in the program for a specified period of time. The views would be recorded during a personal interview with the most appropriate member of each firm. The study is expected to be of special value to the communities (tentative: Ames, Marshalltown and Newton) in which it is conducted and should be of considerable interest to other schools of Iowa who have or are initiating programs.

I would be pleased to provide further information on this study or Clarence would be able to answer almost any question.

You would have been contacted earlier on this matter, but it was deemed best to determine the feasibility of the study before taking any of your time.

I await your approval before proceeding with the study in Newton.

Sincerely,

Charles Havener
Central Jr. High
Ames, Iowa 50010

copy to:

Harold A. Lynn, Principal
Newton Senior High School
East 4th Street South
Newton, Iowa 50208

APPENDIX B

June 2, 1966

Mr. Pat Haberstitch
Iowa Step & Tank
802 Woodbury
Marshalltown, Iowa

Dear Mr. Haberstitch:

This letter is written to ask your cooperation with Mr. C. P. (Chuck) Havener of Ames Central Junior High. Mr. Havener is conducting a research project in cooperative part-time training and he would like to interview some of the employers of our vocational industrial students.

I feel this is a very important study and encourage you to assist Mr. Havener by granting him an interview. He will be contacting you by letter soon to make the arrangements.

We feel this study will be helpful to us as well as to Mr. Havener in evaluating our local program. Thank you for your consideration of his request for an interview.

Sincerely yours,

Francis H. Burnham, Director
Vocational-Technical and
Adult Education
Senior High School
1602 South Second Avenue
Marshalltown, Iowa 50158

PERSONAL CHARACTERISTICS	Outstanding	Good	Acceptable	Fair	Poor	NA/NO	Remarks
Cheerfulness							
Clothing selection							
Grooming							
Punctuality							
Dependability							
Confidence: Poise							
Judgement							
Observance of rules, regulations & policies							
Attentiveness (listener)							
Oral communications:							
Clear, concise							
Choice of language							
Appreciation for value of time							
Appreciation for costs other than time							
Concern for other':							
Feelings							
Safety							
Acceptance of constructive criticism							
Pride of accomplishment							
Customer relations							
Loyalty to employer (firm)							

SHEET #3

SKILLS	Outstanding	Good	Acceptable	Fair	Poor	NA/NO	Remarks
Related math and science							
Written reports, etc.:							
Composition							
Spelling							
Legibility							
Vocabulary (as applied to trade or job):							
First of training period							
Last of training period							
Ability to read blueprints, sketches, etc.							
Quality of work							
Budgeting of time							
Familiarity with equipment:							
First of training period							
Growth rate during year							
Last of training period							
Tools and equipment:							
Safety							
Selection							
Maintenance and care							
Ability to adjust to new techniques, ideas and situations							

SHEET #4

PROGRAM STRENGTHS

Suggestions for IMPROVEMENT:

Student selection and placement:

___outstanding, ___good, ___acceptable, ___fair, ___poor

Communications (letters, phone calls, etc.) from coordinator

Quantity: ___too many, ___just right, ___too few

Importance: ___Necessities only, ___usually needed, ___often not needed

---

Coordinator visits:

___too frequent, ___just right, ___too seldom

Frequency of visits: ___one or more per month, ___every 5 to 8 weeks

___every 9 to 12 weeks, ___two times per school year

Value of visits: very high (4) high (3) mediocre (2) low (1) very low (0)

Related instruction (given in school)

Evident value: very high (4) high (3) mediocre (2) low (1) very low (0)

SHEET #5

During training on the job, student-learners have experienced (?%) of the processes involved in the occupation for which they were training.

__90
__80
__70
__60
__50
__40
__30
__20
__less

Student-learners could (near end of training period) perform processes with:

___little or no supervision ___moderate to close supervision

___occasional supervision ___complete retraining and demonstration prior to performance

---

Have student-learner-graduates received sufficient training to be hired full-time by your firm if openings existed?

___all of them, ___60 to 90%, ___40 to 60%, ___20 to 40%, ___none of them

---

For what level of employment are student-learners competent at end of training period?

_____
(job title, job description, apprenticeship status)

_____

Other thoughts on the Cooperative Part-time Industrial Education Program:

APPENDIX D

June 24, 1966

Mr. Larry Peterson
Larry Peterson Motor Co.
363 S. Duff
Ames, Iowa 50010

Dear Mr. Peterson:

Mr. Leonard Bengtson, Coordinator, Part-time Cooperative Industrial Education and I are working on a research project entitled "Part-time Cooperative Industrial Education as Viewed by Cooperating Employers in Ames, Marshalltown and Newton". We are confident that employer responses made during research interviews will provide information which should help Ames produce persons better suited to your employment needs.

This research project is based entirely on the realization that cooperating employers' observations and opinions must be carefully assembled before:

(1) attempting an accurate description of the present part-time cooperative industrial education program.
(2) any plans to improve the program can be realistically developed and placed into operation.

More specifically, interview responses will serve to identify:

a. personal characteristics possessed by student-learners.
b. skills possessed by student-learners.
c. value of graduate student-learners as prospective employees.
d. strengths of the cooperative part-time training program.
e. suggestions for strengthening the program.

Mr. Bengtson has suggested that I meet with Mr. Howard Grewell. I would like to meet with him for approximately 30 minutes, beginning at 3:00 P.M. on Tuesday, July 5, 1966. If this time will be satisfactory, please check the box marked, "TIME OKAY". If the indicated time will not fit your schedule, please suggest two or three more appropriate times on the enclosed form. In either case please use the enclosed envelope to return the completed form by July 1, 1966.

Thank you for your cooperation in this research project. Your efforts will be much appreciated by employers, future student-learners and, of course, by Mr. Bengtson and myself.

Sincerely,

C. (Chuck) Havener
1015 Harding Ave.
Ames, Iowa 50010

Students your firm has helped train during the past five years:

Larry Harstad
Robert Conklin

*OCCUPATIONS; *TRADE AND INDUSTRIAL EDUCATION; *COURSES; *INDUSTRY; *CODIFICATION; REFERENCE MATERIALS

The purpose of this code book is to furnish job titles and numbers from the "Dictionary of Occupational Titles" which are to be used in the reporting of educational data. Job titles and numbers are given for more than 600 vocational courses. Also indicated are two digit code numbers for each of the courses which indicate: (1) pre-employment, preparatory, or day course, (2) part-time cooperative course, (3) apprentice course, and (4) evening or extension course. Sections within the book are indicated by "Standard Industrial Classification" headings. (EM)

Trade and Industrial Education
November, 1965

F O R E W O R D

The reporting of educational statistics and other information as required by the public and by various government agencies has become a task of major proportions. The use of electronic data processing equipment makes possible faster and more comprehensive and detailed reports than were possible with earlier methods. However, this requires the use of a system of coding of occupations such as found in the Dictionary of Occupational Titles. A slight variation of the system is reproduced in this manual of code numbers for trade and industrial occupations and courses offered in our state.

Over 160 occupations and over 600 courses are listed in this manual with their code numbers. A new section has been added in this edition listing industries according to the Standard Industrial Classification and the occupations within those industries for which we have training programs in our state.

This edition of code numbers, occupations and courses is a revision of a listing published by this office in August of 1964. New courses have been added and some corrections of codes and occupation titles have occurred since that listing was published. Previous editions should be discarded.

Frank H. Wimer, Director
Trade and Industrial Education

INSTRUCTIONS

The system of occupation titles and code numbers found in the Dictionary of Occupational Titles, which is used for reports from the States to the United States Office of Education, should be used for reports from local centers to the State office for trade and industrial courses. Codes shown in this book should be used in reporting all courses to the State office. Occupation titles and code numbers for local courses should be determined after a study of the training objective for each course and a study of occupation titles and numbers shown in this book.

To assist in finding the proper code number for an occupation, all occupations for which we have courses are listed in alphabetical order in a separate section. The codes are arranged in numerical order in the left column. Subjects and titles for courses are listed to the right of the occupations for which they are designed. Courses with their short code numbers are to the right of each occupation to which they pertain. Although a course may fit a cluster of similar occupations fairly well, each course should serve the workers in a specific occupation best and be coded under that occupation. Each course is identified by a short code of two figures:

Number 01 means the pre-employment, preparatory or day course for an occupation.
Number 02 means a part-time cooperative course.
Number 03 means an apprentice course related to the occupation.
Number 04 and above means an evening or extension course for an occupation.

This short code number should be added to the code number for the occupation to which it pertains. Example codes may be:

For a pre-employment course in Auto-Mechanics, 581.010-01
For a related course for auto mechanic apprentices, 581.010-03
For an up dating course for auto mechanics, 581.010-04

The State Board staff will assist in determining the proper codes for any new courses.

*VOCATIONAL EDUCATION ACT OF 1963

Presenting a summary of part A of the Vocational Education Act of 1963 for general public consumption, this document states that the Act authorizes Federal Grants to the States to assist them to maintain, extend, and improve existing programs of vocational education, to provide new programs of vocational education, and to provide part-time employment for youths who need financial assistance to continue their vocational training on a full-time basis. Major objectives presented are: (1) To Develop Occupational Abilities of All Americans, (2) To Develop Occupational Abilities on a Broader Program, (3) To Develop Occupational Abilities through Two 4-Year Programs, (4) To Develop Occupational Abilities through Cooperation and Flexibility, and (5) To Develop Occupational Abilities through Modernization and Expansion. Additional information is available from State Boards for Vocational Education, local public schools, and the United States Office of Education. (WB)

For the World of Work

No longer will a person be able to enter the world of work with a set of skills which will serve him through his working life. He must be in a position to continually upgrade his skills or learn new skills if he is to maintain economic security. The need for lifelong learning is now a fact of life.

—President's Panel of Consultants on Vocational Education

. . . New Programs

A DECLARATION OF PURPOSE

In the words of the Vocational Education Act, its purpose is:

"To authorize Federal grants to States to assist them to maintain, extend, and improve existing programs of vocational education, to develop new programs of vocational education, and to provide part-time employment for youths who need the earnings from such employment to continue their vocational training on a full-time basis, so that persons of all ages in all communities of the State—those in high school, those who have completed or discontinued their formal education and are preparing to enter the labor market, those who have already entered the labor market but need to upgrade their skills or learn new ones, and those with special educational handicaps—will have ready access to vocational training or retraining which is of high quality, which is realistic in the light of actual or anticipated opportunties for gainful employment, and which is suited to their needs, interests, and ability to benefit from such training."

To Develop Occupational Abilities

ALL TYPES OF TRAINING IN ALL TYPES OF EDUCATIONAL INSTITUTIONS

These programs will benefit students in high school; those who have dropped out of school and are unemployed; those who have completed high school but seek specialized training; those who suffer from cultural and economic handicaps; employed adults who want to upgrade their skills and technical knowledge; people of all ages who must learn new skills to earn their living.

They will be established in public school systems; nonprofit agencies and institutions; vocational education departments of high schools; specialized vocational high schools; vocational-technical schools, both secondary and post second-

. . . Of All Americans

ary; junior and community colleges; and four-year colleges and universities, both public and private.

Training for any occupation short of the professions—skilled, semi-skilled, or technical—that is realistic in terms of present and future employment opportunities will be given.

There will be close cooperation with business management, labor, and public employment services, on State and local levels to make certain that training is geared to economic reality and to prevent unemployment by offering training ahead of demand and meeting immediate needs of those unemployed.

OVER THE WHOLE JOB SPECTRUM

FOR WORK TODAY AND TOMORROW

Authorized for Broader Programs

1965	1966	1967 and thereafter
$118.5 million	$177.5 million	$225 million

To Develop Occupational Abilities

The Act authorizes grants of Federal funds to help the States maintain, extend, and improve vocational education; to develop new programs; to promote research and experimentation; to provide teacher training and the development of up-to-date instructional materials and curriculums.

The Act authorizes pilot programs for experimentation with residential vocational schools and for work-study programs for youth who need money to stay in school full time.

IN ADDITION The Smith-Hughes and George-Barden Acts are continued and amended. Federal grants under these Acts are in addition to funds provided in the Vocational Education Act of 1963.

A Broader Program

Ninety percent of the basic appropriation is allotted to the States for:

- Vocational education for persons of all ages in any nonprofessional occupation
- Services to assure high quality vocational programs—teacher training and supervision, program evaluation, demonstration and experimental programs, and the development of instructional materials and equipment
- Vocational counseling and guidance services
- Construction of area vocational school facilities

90 PERCENT FOR REGULAR PROGRAMS

Ten percent of the basic appropriation is for grants to colleges and universities and other public or nonprofit private agencies and institutions; State Boards for Vocational Education; and local education agencies—with the approval of the appropriate State Board for:

- Research and training programs and experimental and developmental or pilot programs designed to meet the special vocational needs of youth who have academic, socioeconomic, or other handicaps that prevent them from succeeding in regular vocational education programs (Particular emphasis will be on programs in economically depressed communities or rural areas.)

10 PERCENT FOR EXPERIMENTATION

To Develop Occupational Abilities

A WORK-STUDY PROGRAM

FOR YOUNG PEOPLE AGED 15–20

IN COMMUNITIES WITH DROPOUT PROBLEMS

Grants to the States are for support of locally administered programs providing part-time employment to vocational education students employed by the local education agency or other public agency or institution. Students must be in good standing, in full-time attendance, and in need of earnings to start or continue full-time schooling.

Grants may be made for construction and operation of a small number of demonstration

. . . Two Four-Year Programs

AND RESIDENTIAL VOCATIONAL SCHOOLS

residential schools in metropolitan areas. The purpose is to help seriously disadvantaged youth make the transition from unfavorable home and neighborhood environments to successful entrance into the labor force. State Boards for Vocational Education, colleges or universities, or local public educational agencies, organizations, or institutions with the approval of State Boards, may apply for such grants. (Funds for this program were not appropriated for fiscal year 1965 by the 88th Congress.)

FOR DISADVANTAGED YOUTH

IN UNFAVORABLE HOME AND COMMUNITY ENVIRONMENTS

Authorized for *both* programs

1965	$30 million	1967	$35 million
1966	$50 million	1968	$35 million

To Develop Occupational Abilities

ADMINISTRATIVE COOPERATION

- Programs under the Act (with the exception of grants for research and training and grants for residential vocational education schools) are to be administered by State boards for vocational education or—with the approval of the appropriate State board for vocational education—by local public education agencies.
- State vocational education agencies will cooperate with public employment offices in an interchange of information regarding prospects of employment and qualifications of persons trained in vocational education courses.
- State allotments for programs conducted under authority of the Smith-Hughes and George-Barden

. . . Cooperation and Flexibility

Acts may be transferred within the provisions of these Acts or to the new programs.

• As further assurance that the training programs are geared as closely as possible to current needs and conditions, the Act contains special provisions for the following advisory and review bodies to be made up of persons who are familiar with the vocational education needs of management and labor or who have special knowledge and experience of vocational education:

—State advisory councils, in States where State boards for vocational education do not have sufficiently broad representation.

—A 16-member National Advisory Committee (to include the U.S. Commissioner of Education, representatives of the Departments of Commerce, Agriculture, and Labor, and 12 nongovernmental members, not more than 6 of whom shall be educators) to advise on policy and administrative procedures under the Act.

—A 12-member National Advisory Council on Vocational Education, to review and evaluate all publicly supported programs of vocational education, starting in 1966 and reporting its findings by January 1, 1968. Similar reviews are to be made periodically thereafter.

BUILT-IN FLEXIBILITY

To Develop Occupational Abilities

BUILDING ON THE PAST

- The new Act provides the basis for the expansion and modernization of the local-State system of vocational education established by the Smith-Hughes and the George-Barden Acts.
- The Act makes permanent the annual Federal authorization for programs in practical nursing and other health occupations provided under the Health Amendments Act of 1956 and the authorization for technical education formerly provided under Title VIII of the National Defense Education Act of 1958.

*CLASSIFICATION; *DISTRIBUTIVE EDUCATION; MARKETING; *STUDENT ENROLLMENT; *REFERENCE MATERIALS; INDUSTRY

This booklet is used as a base in annual enrollment reports on education for distribution made by State Boards for Vocational Education to the Office of Education. The use of the classification in the enrollment report for education in distribution and marketing is limited to distributive occupations which occur in: (1) economic activities of manufacturing, (division D of SIC Manual), (2) transportation, communication, electric, gas, and sanitary services, (division E), (3) wholesale and retail trade, (division F), (4) finance, insurance, and real estate (division G), and (5) services (division H). The structure of the classification makes it possible to classify establishments by industry on a two-digit, a three-digit, or four-digit basis. (MM)

Foreword

STANDARD INDUSTRIAL CLASSIFICATIONS [1] are used as a base in annual enrollment reports on education for distribution made by State Boards for Vocational Education to the Office of Education. The SIC gives standard definitions which are compatible with the Census of Business. The material in this publication, which has been taken from the SIC Manual, is organized for reference in completing the annual report on education for distribution (Form OE–VTED–4049).

The Standard Industrial Classification was developed for use in the classification of establishments by types of activity in which engaged; for purposes of facilitating the collection, tabulation, presentation, and analysis of data relating to establishments; and for promoting uniformity and comparability in the presentation of statistical data collected by various agencies of the United States Government, State agencies, trade associations, and private research organizations.

The Classification is intended to cover the entire field of economic activities. The use of the Classification in the enrollment report for education in distribution and marketing is *limited to distributive occupations* which occur in

[1] *Standard Industrial Classification Manual*, prepared by the Technical Committee on Industrial Classifications, Office of Statistical Standards, Bureau of the Budget.

economic activities of manufacturing (Division D of the SIC Manual); transportation; communication; electric, gas, and sanitary services (Division E); wholesale and retail trade (Division F); finance, insurance, and real estate (Division G); and services (Division H).

These divisions are included as specific items in the report as these economic areas represent the greatest concentration of distributive occupations.

The order of the material in this bulletin (Divisions F, H, E, G, D) follows the organization of the report form. This form of organization has been adopted because it reflects the order of the frequency of distributive occupations in the various economic activities.

The structure of the Classification makes it possible to classify establishments by industry on a two-digit, a three-digit, or a four-digit basis, according to the degree of detail in information which may be needed. It permits selection of the level of detail considered most appropriate for presentation of data. Also, it permits the use of additional subdivisions in adopting this Classification while still retaining comparability with the classifications used by other agencies.

W. M. ARNOLD,
Assistant Commissioner for Vocational and Technical Education.

Standard Industrial Classification For Use in Distributive Education

DIVISION F. WHOLESALE AND RETAIL TRADE

Retail Trade

* **52** **Lumber, Building Materials, Hardware, Farm Equipment**

5211—Lumber yards
5212—Building materials dealers
522 —Heating, plumbing equipment dealers
523 —Paint, glass, wallpaper stores
524 —Electrical supply stores
5251—Hardware stores
5252—Farm equipment dealers

53 **General Merchandise**

531 —Department stores

Establishments normally employing 25 or more people and engaged in selling some items in each of the following lines of merchandise:

1. Furniture, home furnishings, appliances, radio and TV sets
2. A general line of apparel for the family
3. Household linen and dry goods

An establishment with a total sales of less than $5 million, in which sales of any one of these groupings is greater than 80 percent of total sales, is not classified as a department store. An establishment with total sales of $5 million or more is classified as a department store even if sales of one

* Numbers boxed are those used in annual report form.

of the groups described above is more than 80 percent of total sales, provided that the combined sales of the other two groups is $500,000 or more.

533 —Limited price variety stores

5392—Dry goods and general merchandise stores

Establishments which meet the criteria for department stores, but have fewer than 25 employees.

5393—General stores

Establishments primarily selling a general line of merchandise of which the most important line is food, and the more important subsidiary lines are notions, apparel, farm supplies, and gasoline. (Usually known as a country general store.)

54 Food

541 —Supermarkets, grocery stores, delicatessen stores
5422—Meat markets
5423—Fish markets
543 —Fruit stores, vegetable markets
544 —Candy, nut, confectionery stores
545 —Dairy products stores
5462—Retail bakeries-manufacturing (some or all of products baked on premises)
5463—Retail bakeries-nonmanufacturing (do not bake any of products they sell)
5491—Egg and Poultry Dealers (limited line of groceries frequently carried)
5499—Other—specialized lines, e.g., coffee, spice, health foods

55 Automotive Dealers and Gasoline Service Stations

551—Passenger car dealers, franchised
552—Passenger car dealers, nonfranchised

553—Tire, battery, accessory dealers
559—Aircraft, boat, motorcycle dealers; other

554 Gasoline Service Stations

56 Apparel and Accessories

561 —Men's, boys' clothing stores
562 —Women's ready-to-wear stores
5631—Millinery stores
5632—Lingerie stores
5633—Hosiery stores
5634—Other specialty stores (women's)
564 —Children's, infants' wear stores
565 —Family clothing stores
5662—Men's shoe stores
5663—Women's shoe stores
5664—Children's shoe stores
5665—Family shoe stores
567 —Custom tailors
568 —Furriers, fur shops
569 —Miscellaneous apparel

57 Furniture, Home Furnishings, and Equipment

5712—Furniture stores
5713—Floor coverings stores
5714—Drapery, curtain, upholstery stores
5715—China, glassware, metalware stores
5719—Miscellaneous home furnishings stores (specialized lines—lamps, blinds and window shades, picture frames, etc.)
572 —Household appliance stores
5732—Radio and television stores
5733—Record shops, musical instrument stores

58 Eating and Drinking Places

Note: Unless food services are operated as leased departments, restaurants, and lunch counters operated by hotels, for

example, are classified in Group 70 and by department stores in Group 53.

5812—Restaurants, cafeterias, caterers, railroad dining-cars

5813—Drinking places

59 Other Retail Stores

591 Drugstores

592 —Liquor stores

593 —Secondhand stores, antique stores

5942—Book stores

5943—Stationery stores

5952—Sporting goods stores

5953—Bicycle shops

5962—Hay, grain, feed stores

5969—Other farm supply stores, garden supply stores

597 —Jewelry stores

5982—Coal and wood dealers

5983—Fuel oil dealers, liquified petroleum (LP) gas dealers

5984—Ice dealers

5992—Florists

5993—Cigar stores, stands

5994—News dealers, news stands

5996—Camera, photographic supply stores

5997—Gift, novelty, souvenir shops

5998—Optical goods stores

5999—Typewriter, luggage, hobby, toy, religious goods stores; pet shops; other

Nonstore Retailers

532 Mail-order houses

534 Merchandise vending machine operators

535 Direct selling (house-to-house) organizations

Wholesale Trade

501 Motor Vehicles, Automotive Equipment

5012—Automobiles, other motor vehicles

5013—Automotive equipment

5014—Tires and tubes

502 Drugs, Chemicals, Allied Products

5022—Drugs, drug proprietaries, druggists' sundries
5028—Paints, varnishes
5029—Other chemicals, allied products

503 Dry Goods, Apparel

5032—Dry goods, piece goods, notions
5035—Apparel and accessories, hosiery, lingerie
5039—Footwear

504 Groceries and Related Products

5042—Groceries, general line
5043—Dairy products
5044—Poultry, poultry products
5045—Confectionery
5046—Fish, sea foods
5047—Meat, meat products
5048—Fresh fruits, fresh vegetables
5049—Other groceries and related products

505 Farm Products—Raw Materials

Establishments primarily engaged in wholesale distribution of farm product raw materials, most of which are used in manufacturing industries.

506 Electrical Goods

5062—Electrical merchandise, general line
5063—Electrical apparatus and equipment, wiring supplies, construction materials
5064—Electrical appliances, television, radio sets
5065—Electronic parts, equipment

507 Hardware; Plumbing and Heating Equipment and Supplies

5072—Hardware

5074—Plumbing and heating equipment, supplies
5077—Air conditioning, refrigeration equipment, supplies

508 **Machinery, Equipment, Supplies**

5082—Commercial and industrial machinery, equipment, supplies
5083—Farm machinery and equipment
5086—Professional equipment, supplies
5087—Service-establishment equipment, supplies
5088—Transportation equipment, supplies (except motor vehicles)

509 **Miscellaneous Wholesale**

5091—Metals, minerals
5092—Petroleum bulk stations, terminals
5093—Scrap and waste materials
5094—Tobacco, tobacco products
5095—Beer, wine, alcoholic beverages
5096—Paper, paper products
5097—Furniture, home furnishings
5098—Lumber, construction materials
5099—Other, e.g., farm supplies, jewelry, flowers, and nursery stock

DIVISION H. SERVICES

70 ***Hotels, Camps, and Other Lodging Places***

7011—Hotels—year round
7012—Seasonal hotels
7013—Motels and tourist courts
702 —Rooming and boarding houses
7031—Trailer parks
7032—Sporting and recreational camps
704 —Other, e.g., lodging houses on membership basis

72 ***Personal Services***

7211—Power laundries, family and commercial
7212—Laundries, except power and self-services

7213—Industrial launderers, linen supply
7214—Diaper service
7215—Self-service laundries
7216—Cleaning, dyeing plants
7221—Photographic studios
7231—Beauty shops
7241—Barber shops

*HEALTH OCCUPATIONS; *HEALTH OCCUPATION EDUCATION; MANPOWER UTILIZATION; PROGRAM DEVELOPMENT; *FEASIBILITY STUDIES; *RESEARCH PROJECTS; EDUCATIONAL PROGRAMS; MANPOWER NEEDS; *MANPOWER DEVELOPMENT

An association study of nursing resources pointed up the need to expand the study scope to include other health occupations. A feasibility study involving group meetings and individual interviews assured interest in the pursuit of a comprehensive study and elicited suggestions that the following be determined and evaluated: (1) the existing division of labor among the health occupations, (2) the knowledge and skill levels required, and (3) the training required to provide the needed knowledge and skill. Some of the major factors identified as affecting health personnel needs were: (1) increasing demand for health services, (2) gaps in availability of services, (3) advancements in technology and medical science, (4) the health services organizational structure, (5) limited vertical and horizontal mobility, (6) unimaginative recruitment efforts, (7) population growth, and (8) attractive alternative employment opportunities. The proposed 5-year comprehensive study, developing an orderly plan for meeting present and projected requirements, would include the following phases: (1) development of a detailed work plan, (2) development of a short-range plan of action, (3) study of personnel utilization, identification of new, restructured, or unchanged health occupations, and projection of needs over a 15-year period, and (4) development of a comprehensive long-range plan for education of occupation groups. A SUMMARY OF PRELIMINARY FINDINGS, CONCLUSIONS AND RECOMMENDATIONS OF A STUDY OF MANPOWER REQUIREMENTS AND EDUCATION AND TRAINING PROGRAMS OF SELECTED HEALTH OCCUPATIONS

This summary consists of a brief description of historical information related to the Indianapolis Hospital Development Association and its activities, a preliminary report on a health manpower project feasibility study, and presentation of a general plan of approach to a proposed comprehensive study of health manpower requirements, utilization, and education and training of selected health occupations in the Indianapolis metropolitan area.

GENERAL BACKGROUND INFORMATION

The Indianapolis Hospital Development Association is a non-profit organization composed of community leaders from business, industry, education, and selected health professions which was organized nearly 15 years ago. A brief summary of its objectives and recent activities is attached as Exhibit I.

The Association's primary purpose is to facilitate the development and/or improvement of health services in the Indianapolis area to the maximum possible extent. It has actively and successfully sought to interest and involve a wide array of community leaders in its work.

The Association devoted its early efforts to raising capital funds for hospitals. Subsequently, it developed broader interests in the organization and delivery of community health services. IHDA recognized the vital need for an adequate number

of well-trained personnel to staff the facilities to provide the required level of health services in the area. As evidence of its broader interests and responsibilities, about two years ago the Association sponsored a comprehensive nursing resources study to ascertain nursing resources needed in the community, and how they could be provided.

The firm of Booz, Allen & Hamilton Inc. was engaged to aid in the study of nursing resources. A special representative steering committee was appointed to work closely with the consultants. The consultants collected and analysed substantial amounts of data and scheduled numerous interviews with Indianapolis area and national nursing leaders. Other studies of nursing resources were reviewed and evaluated, and a nursing education cost study was conducted. Characteristics of employed nurses, schools of nursing, students admitted to and graduated from nursing schools were identified and analysed along with future career plans of a large number of high school seniors in the metropolitan area.

The findings and conclusions of the study resulted in the preparation of recommendations to meet nursing requirements to 1975. Specific recommendations were made to phase out several diploma programs, to initiate several associate degree programs, and to expand existing baccalaureate and licensed practical nursing programs. Suggestions were also made to shift the primary responsibility for nursing education costs from the providers of health services to the educational system.

Participants in the nursing study and IHDA recognized the need to expand the study scope to include other health occupations. They suggested that the availability

of and need for other allied health personnel be identified, that utilization of health personnel be studied critically, and that the possibility of developing bold new approaches to utilizing and educating health personnel be considered.

Before actually extending the scope of health manpower planning to include other health occupations, the Association decided to undertake a feasibility study of the proposed project because of its complexity and potentially controversial nature.

PRELIMINARY REPORT ON THE FEASIBILITY STUDY

The feasibility study began in August of 1966 and concluded November 30,1966. It was financed by the Office of Education of the U.S. Department of Health, Education and Welfare and was conducted by the Indianapolis Hospital Development Association in cooperation with the management consulting firm of Booz, Allen & Hamilton Inc. The purpose of the study was to ascertain the feasibility of a systematic study of health manpower requirements, utilization, and related education and training in the Indianapolis metropolitan area.

During the course of the study group meetings and individual interviews were scheduled in Indianapolis and elsewhere. In Indianapolis the goal was to determine the degree of interest and willingness of selected area health and education leaders to participate in the comprehensive study and to obtain their counsel on how to approach the proposed study. In addition, the advice of national health and education leaders was also sought.

Efforts were made to identify other health manpower research projects and to review their potential applicability to the proposed Indianapolis study. The

study team visited, Pittsburgh, Pennsylvania, to review the Health Research Project of the Pittsburgh Board of Education; Ann Arbor, Michigan to review the work of the Hospital Systems Research Group; and Battle Creek, Michigan, to talk with Robert Kinsinger, Director of Education for the Kellogg Foundation. The team also interviewed Peter Bing, M.D. and his staff assistant of the Presidential Health Manpower Commission, F.J.N. Blasingame, M.D., Executive Vice President of the American Medical Association, R.F. Manegold, Director, Division of Hospital and Medical Facilities of the American Medical Association, and Edward W. Weimer, Assistant Secretary of the American Hospital Association and Director of the Department of Labor-American Hospital Association Joint Manpower for Health Program.

In conducting the study, the team found that health services are receiving increasing attention at the national, state, and local levels. New and more demanding national health goals have evolved and broad and comprehensive new programs have been established which will significantly affect the future organization and delivery of health services, as well as demand for services. The percentage of the gross national product spent for health related services has increased from 3.5% in 1930 to about 6% in 1965 -- an indication of the increasing value ascribed to health in the nation. Approximately 40 billion dollars were spent for health related services in 1965.

As health programs have been developed and extended, there has been a concomitant increase in demand for and utilization of health services. Increased utilization of services and implementation of new programs have resulted in the

need for more health manpower. Furthermore, it appears that more highly skilled manpower is required in increasing proportions at almost all occupational levels.

The number of people employed in the health services is increasing dramatically. In 1950, there were 1.6 million health service workers; in 1965, the number had grown to approximately three million or 4% of the total labor force in the United States. A recent study of health manpower requirements conducted jointly by the American Hospital Association and the Public Health Service identified the current need for 275,000 additional professional and technical personnel to provide optimum patient care in the nation's hospitals.

In view of present and anticipated future requirements, the majority of those interviewed were enthusiastic about conducting a comprehensive study of health manpower requirements, utilization and related educational and training programs.

The need for careful and thorough study of the range of tasks performed by health workers in the provision of health services was suggested to determine and evaluate:

- The division of labor that exists between the various health occupations.
- The knowledge and skill levels required to perform the range of tasks.
- The training required to provide the needed knowledge and skill.

The following were often cited as the major factors affecting present and future health personnel needs.

- Increasing demand for health services
- Present gaps in availability of health services
- Expansion of physical facilities
- Impact of technology and advances in medical science
- Development of new programs and services
- Effect of health service organizational structure
- Little opportunity for vertical or horizontal mobility in the health occupations
- Unimaginative recruitment efforts
- Growth of the population
- Attractive alternative employment opportunities for both men and women, including second career opportunities

Additional suggestions for either attracting more people to the health field or for utilizing or training present workers more effectively were made. It was proposed that recruitment efforts be improved and that health worker salaries be increased significantly. Unrealistic accreditation and licensing requirements, and the constraints which result, were often cited as major problems facing employers and educators of health workers. Identification of undertraining and overtraining of health workers was also recommended as one of the first requirements in a long-term plan for meeting manpower needs. It was suggested that opportunities for "career ladder" advancements in the health field be developed to permit more effective use of available health manpower.

Findings of the feasibility study support several general conclusions.

1. There is a serious concern about meeting health manpower needs in the Indianapolis area.

2. Indianapolis leaders are interested, willing, and enthusiastic about taking whatever action is required to ensure the accessibility of adequate numbers of health personnel in the future.

3. The proposed comprehensive study is desirable, feasible, and the plan of approach can be executed successfully in the Indianapolis area.

4. Successful execution of the study should result in the development of a model approach to health manpower planning which could be applied in other cities of comparable size.

Efforts are currently underway in the Indianapolis area to assemble baseline information concerning health education and training costs, current and projected health manpower needs, and the current output and future plans of education and training programs.

PLAN OF APPROACH TO THE COMPREHENSIVE STUDY

The purpose of the comprehensive study is to develop an orderly plan for meeting present and projected health manpower requirements in the Indianapolis metropolitan area. To the extent possible, the study will relate health manpower planning to the volume of health services currently used, needed, or expected to be needed in the years ahead.

Short-range opportunities for increasing the supply of scarce health personnel will be identified and action-oriented plans developed to meet acute manpower needs. The study will also include the development of long-range plans to meet future health manpower requirements.

The general plan for the comprehensive study sets forth an approach for planning to meet changing health service and health manpower needs so that change will occur as directed rather than as the result of haphazard reaction. The study process is structured to ensure that planning and action can be linked effectively to achieve the best possible over-all results for the community.

The study as currently defined will consist of four phases which include eleven major tasks. Approximately 64 months will be required to complete the project. (See Exhibit II) A brief description of each major phase follows.

Phase I

The major participants in the study will devote a minimum of four months to the development of a detailed work plan for the comprehensive study before subsequent tasks are begun. The need for thorough planning of a five-year undertaking of the scope and magnitude proposed cannot be overemphasized. Completion of the study within the projected time schedule, achieving effective utilization of study staff and maintaining control of costs will require orderly scheduling of work assignments and identification of critical points in the over-all study process.

General methodology and data collection and analysis plans for the entire project will be developed by the study staff during Phase I. Time and cost estimates and the staffing plan will be reviewed and refined by major task.

Because of the empirical nature of the study, detailed planning for subsequent phases will usually follow completion of the preceeding phase. Therefore, while general plans for the entire study will be refined during Phase I, particular attention will be given to the required detailed planning

Phase II

A short-range plan of action for meeting acute health manpower needs in the Indianapolis area will be prepared during Phase II. The plan will be directly related to services either presently provided, needed or planned for delivery in the future.

The community's pattern of organization for the delivery of comprehensive health services will also be studied. In addition, specific programs and services, present staffing, available facilities and sources of financing will be described. The volume of inpatient, abulatory and public health services will be identified. Carefully designed sampling techniques utilizing refined data collection instruments will be employed where appropriate to secure the needed information.

The present and estimated future supply of health manpower will be determined, in part, by identifying the present and projected output of existing education or training programs for selected health personnel in the Indianapolis area. Specific information about selected programs such as student capacity, enrollment history, and number of students completing programs will be developed. Faculty staffing patterns, education or training facilities, and financial resources will also be described. Methods

used to collect and analyze data during the Indianapolis nursing resources study referred to previously will be refined and employed where feasible.

The final task of Phase II will involve a determination of manpower needs for selected existing health occupations. Providers of health services in the community will be requested to update current manpower need estimates and to project future requirements for five years. Concurrently, the study staff will develop other health manpower need estimates for selected health occupations. Estimates of the providers of service and the study staff will be compared and analysed and used to estimate present and future health manpower requirements for the area.

The estimated need for personnel in selected health occupations will be compared with the expected output of education and training programs. In-and-out migration of health personnel will be considered. An action-oriented plan to exploit short-range opportunities to increase the supply of health workers will be developed and implemented. Plans will give high priority to meeting acute manpower requirements.

Standing IHDA committees, such as the Staffing of Health Care Facilities Committee, will be actively involved in the study. Representative advisory groups of community leaders will also be selected to work closely with the study team as it proceeds with its work. Authorities outside the Indianapolis area will be requested to participate in the final analysis of information and in the development of conclusions and recommendations to improve the range and quality of health services in the

Indianapolis area.

Phase III

The development of a sound and imaginative long-range plan to meet expected future health personnel needs will require an intensive examination of how present personnel are being utilized and an evaluation of the appropriateness of their utilization. The tasks currently being performed by personnel providing direct health services to people will be identified and analysed systematically. Related tasks will be grouped according to the nature of the work or function to be performed. The level of knowledge and skill required to perform health service tasks will also influence the grouping of tasks. Where possible, expected new health service tasks will be considered in the task grouping process. This effort will be coordinated where feasible with the systems analysis work of the centralized computer system project.

Subsequently, new, restructured or unchanged selected health occupations will be identified. Based on the new, restructured, or unchanged occupations identified, manpower needs per population or service unit will be estimated for 15 years at five-year intervals. Quantitative estimates of comprehensive health service requirements will be made and related to health personnel needs where possible. New or expanded requirements for health services also will be considered.

Phase IV

A comprehensive long-range plan for the education and training of selected health occupational groups will be prepared for the Indianapolis area. The identification of new, restructured and unchanged health occupational categories will require a thorough analysis of the existing education or training programs to ensure that curricula are designed to provide the education or training selected health personnel need to perform assigned tasks at a quality level.

Pilot education and training programs for preparation of personnel for selected restructured or new health occupations will be established and conducted. Following identification of specific pilot programs, the curriculum content and the sequence of study required to prepare persons for selected restructured or new health occupations will be determined. Opportunities for developing core courses for more than one occupational classification will be studied. Pilot programs will be organized and students selected.

During this phase of the project efforts will be made to secure commitments from several groups. The cooperation of certification and licensing agencies will be solicited. Providers of health services who are willing to realign task assignments to accommodate persons prepared for new or restructured health occupations will be identified. Employers will be asked to permit "career ladder" advances within health occupational fields.

The pilot education and training programs will be evaluated and a mechanism for continuing evaluation developed. Plans will also be made to include traditional education and training programs in the evaluation process where possible.

Finally, an analysis of the comprehensive study will be prepared and disseminated. Other communities and regions across the nation will thus have access to the detailed results of the study.

Selection and recruitment of the study staff will be an extremely important undertaking. A general project staff will be needed to assure overall continuity and coordination of the work. Special skills of a variety of disciplines also will be needed intermittently. Consultants who can provide the required special skills will be used extensively. Selective use of this source of talent will permit the best possible application of existing financial and personnel resources. Consultant representatives of several special disciplines will be needed for the comprehensive study.

- Behavorial scientist
- Operations research specialist
- Industrial engineer
- Data processing specialist
- Statistician
- Educational specialist
- Allied health profession educators
- Curriculum analyst
- Others

* * * * *

The job to be done will be difficult, complex and time consuming. It will require the imaginative and creative efforts of a multi-disciplinary team, the continued cooperation and interest of Indianapolis area community leaders, and the commitment of substantial financial resources. A successful health manpower research and planning venture of the kind proposed will go a long way toward providing comprehensive personal health services of high quality for Indianapolis area citizens.

The approach to health manpower planning, the methodologies developed, and the finding, conclusions, and recommendations of the comprehensive study should benefit other comparable United States cities in solving their manpower problems.

Exhibit I
Indianapolis Hospital Development Association, Inc.

THE OBJECTIVES AND ACTIVITIES OF THE
INDIANAPOLIS HOSPITAL DEVELOPMENT ASSOCIATION

The Indianapolis Hospital Development Association, Inc., was organized nearly 15 years ago. Its basic objectives are to:

- Determine the need for expansion or construction of health care facilities.
- Assign equitable and reasonable priorities in allocating funds to existing or planned institutions.
- Aid in the development of health care facilities by raising capital funds on a community-wide basis.
- Sponsor or conduct studies related to the development or improvement of health care services and facilities in the Indianapolis area.
- Support special projects which are in the best interests of the health system in Indianapolis.

In carrying out its basic objectives, the Association through the years has:

- Conducted a successful $12 million capital building fund drive in 1952-1953.
- Provided funds to assist in the initiation of the first two-year nursing program in the Indianapolis area in 1953.
- Conducted a study in 1962 to ascertain the needs of area hospitals for future additional beds and health service programs.
- Updated, in 1965, the 1962 study of the needs of area hospitals for additional hospital beds.
- Established, in 1965, a priority of needs by which community funds collected by IHDA could be distributed among hospitals for additional hospital beds.
- Sponsored the development of a $1.8 million centralized laundry facility to provide laundry services for area hospitals.

Currently, IDHA is successfully completing a $15.5 million community campaign to marshall funds to help provide needed hospital facilities. In addition, it is:

- Implementing a centralized computer system for area hospitals and health agencies. The project is financed by a Public Health Service grant.
- Beginning an area-wide planning project under another grant from the Public Health Service.

NATIONAL DEFENSE EDUCATION ACT OF 1958 TITLE VIII; *VOCATIONAL EDUCATION ACT OF 1963; *GEORGE BARDEN ACT TITLE III

The need for educating highly skilled technicians was implemented with the passage of Title VIII of the National Defense Education Act of 1958. Federal funds are paid to the states on a matching dollar basis to help defray expenditures for surveys, salaries, equipment, supplies, teacher education, and certain other program costs. The training is conducted under the direction of the State Boards for Vocational Education in accordance with their respective state plans. The preparatory programs and extension courses are offered in public vocational and technical schools, technical institutes, community and junior colleges, state universities, and secondary schools. Some achievements of the program in 1964 were: (1) More than 221,000 adults and youth were enrolled in institutions offering technical education, (2) Training programs were offered in 11 specialized areas, (3) 881 schools offered technical training in 1964 compared to 262 in 1959, and (4) Of 1[illegible],292 graduates available for placement, 70 percent were placed in the technical field for which they were trained and 11 percent in fields related to their training. Data on federal and matching funds, enrollments, schools, program courses, graduates, placement, and salary of graduates are included. (WB)

REPORT OF PROGRESS

The need for educating highly skilled technicians was first recognized and implemented by Federal legislation with the passage of Title VIII of the National Defense Education Act of 1958. Congress, through the Act, directed the Office of Education to administer grants of funds to the States to be matched dollar for dollar to train highly skilled technicians in occupations requiring scientific knowledge in fields necessary for national defense.

Federal funds paid to a State under this title are used to help defray expenditures for surveys, salaries, equipment, supplies, teacher education, and certain other program costs. The training is conducted under the direction of the State Boards for Vocational Education in accordance with their respective State plans. The preparatory programs and extension courses are offered in public vocational and technical schools, technical institutes, community and junior colleges, State universities, and secondary schools.

In terms of number of persons served, participating institutions, breadth of offerings, and quality of offerings, the program has grown rapidly since the implementation of the Act in fiscal 1959. The success of the program was recognized by Congress and Title VIII was made a permanent part of the Vocational Education Act in 1963 as Title III of the George-Barden Act.

Included in the achievements of the program in fiscal 1964 are the following highlights:

- More than 221,000 adults and youth were enrolled in institutions offering technical education, an increase of 236% since the program began in 1959.

- Programs were offered in electronic, electrical, mechanical design, chemical, metallurgical, civil and construction, mechanical production, instrumentation, nuclear, and plastics technology; and in electronic data processing, computer programming.

- In 1964 there were 881 schools offering technical training, compared to 262 in 1959.

- More than 128,000 persons enrolled in extension courses designed to upgrade the skills of adult technical workers.

- Nearly 72,000 students were enrolled in 2-year post secondary preparatory programs, and more than 20,000 students were enrolled in post secondary programs.

- Enrollments of women in preparatory technical education programs have increased from 473 in 1961 to 6,548 in 1964. Most of the women enrollees are in electronic and data processing programs.

- 49 States, the District of Columbia, and Puerto Rico, have reported graduates of vocational preparatory programs. A total of 16,347 completed preparatory curriculums. Of these graduates 3,427 (21%) continued their formal education and 1,028 (6%) joined the Armed Forces.

- Of the 11,292 graduates available for placement, 70% were placed in the technical field for which they were trained and 11% in a field related to their training. Only 2.5% were known to be unemployed.

- The average starting salary paid to graduates of 2-year post secondary preparatory programs was almost $5,000 a year and the graduates of high school programs, $3,700 a year.

*EMPLOYMENT SERVICES; *YOUTH EMPLOYMENT; FEDERAL PROGRAMS; STATE PROGRAMS; *PROGRAM DESCRIPTIONS; *STATE AGENCIES; *YOUTH AGENCIES; EMPLOYMENT PROGRAMS; DROPOUTS; JOB TRAINING
*YOUTH OPPORTUNITY CENTERS; YOC

The federal-state employment service system has greatly intensified its services to youth--in counseling, testing, training, referral, and placement. By September, 1966, there were 157 Youth Opportunity Centers (Y.O.C.'s) and 706 youth units in local employment service (E.S.) offices, employing over 8,000 personnel who were devoted full-time to youth-serving activities. During the school year 1964-65, more than 633,000 school seniors in nearly 10,000 high schools were served, including 333,000 who received counseling services and 116,700 who were placed in permanent jobs. Services were provided graduating seniors on school premises as well as in local E.S. offices. Of 73,000 dropouts served, over 27,000 were placed in jobs during the 1964-65 school year. Greater attention has continually been directed toward dropouts. The E.S. also provides specialized services suited to the needs and abilities of college graduates and dropouts, handicapped youth, rural youth, Selective Service rejectees, and students seeking part-time or summer employment. The challenge facing the E.S. is suggested by the fact that in 1965, 39.2 percent of new job applications filed in E.S. offices were filed by youth under 22 years of age, yet youth accounted for only 27.7 percent of all nonfarm placements made by the E.S. and most youth were placed in clerical, sales, service, and unskilled occupations. YOUTH EMPLOYMENT PROGRAM OF THE

UNITED STATES EMPLOYMENT SERVICE

.....

INTRODUCTION

A great many young people today need help with their job problems -- in choosing a career in keeping with their interests and abilities, in becoming employable, in developing acceptable work habits, and in getting their first jobs. Such help is available to all youth in their public Employment Service offices.

Today, the youth unemployment problem looms large on the American scene, with joblessness among teenagers nearly triple the adult rate. Some of the problem stems from sheer numbers -- a result of the sharp birthrate rise in the postwar period. The strides made in science and technology and the subsequent vast industrial and agricultural transformations have diminished the demand for unskilled workers both in industry and on farms. This adds to the problem of those youth who lack the education, training and skills needed to qualify for many of the jobs in today's advanced and changing economy.

The American public has become keenly aware of the Nation's jobless youth, both from an economic and a social point of view. Joblessness among many especially in the congested city areas, has been marked by growing crime rates, an unprecedented rise in juvenile delinquency, and other symptoms of unrest. The national concern has brought forth legislative measures involving numerous programs for

constructive action to help combat the growing problems.

As an arm of the government devoted to people and jobs, the Federal-State employment service system has greatly intensified its services to youth -- in counseling, testing, training, referral and placement. It has set up special centers and units and selected specialized staff to provide all manner of services to help youth who need such help become employable. Through outreach activities, it seeks out disadvantaged young people to help give them the guidance and personal job help they need.

The nationwide network of public employment service offices has much to offer all youth, not only in individual services but in a wealth of job market information in keeping with the rapid changes in the economy.

THE ROLE OF THE EMPLOYMENT SERVICE

Since the inception of the Federal-State employment service system under the Wagner-Peyser Act of 1933, which specifically provided for special services to "men, women, and juniors," the U. S. Employment Service has been actively concerned with the employment problems of beginning workers. When the Employment Service counseling program was established on a nationwide basis in 1945, much of the work for youth was included as an integral part of that program. Beginning in 1948, the Employment Service has provided specialized assistance to increasing numbers of high school seniors entering the Nation's job market. In 1956, the Employment Service began to intensify its efforts for school dropouts.

The need for a stronger employment program to help resolve youth problems was made clear by the President in 1961, when he directed that "the Department of Labor and its nationwide network of affiliated State employment service offices attack vigorously the mounting problems of youth." The magnitude of these problems can be appreciated from the fact that the majority of the 2.7 million people who were new entrants to the labor force in 1965 were youth. It is estimated that about 3 million youth will be starting to work in the year 1970.

Major legislation enacted since 1963, including the Economic Opportunity Act, the Higher Education Act, and the Vocational Education Act, has done much to ease the transition from school to work for many young people. The Job Corps, under the Office of Economic Opportunity,

has absorbed 55,351 young men in work training camps as of September 30, 1966. Women's Job Corps has provided work and training for 4,132 young women as of the same date. Neighborhood Youth Corps, funded by the Office of Economic Opportunity and administered by the Department of Labor, provided work training experience for 460,000 boys and girls between July 1, 1965, and June 30, 1966. As of August 31, 1966, over 166,000 youth have received training under Manpower Development and Training Act programs. The Employment Service is the primary recruitment and screening agent for most of these programs, and also plays the major role in placing youth in appropriate jobs in business and industry as they complete their term of enrollment.

In carrying out its responsibilities, the Employment Service attempts to provide young people with the kind of help they need in choosing a field of work that is in keeping with their interests, abilities, and aspirations. Another objective is to provide youth, teachers, and parents with local, up-to-date information about the nature of jobs and the opportunities for employment in various occupations. The final objective is to see that an individual develops the attitudes and skills necessary to actively participate in the economy and to insure that he is placed in an appropriate job.

While all of the programs mentioned here have done much to increase the employability of many youth, much remains to be done. This is demonstrated in part by reports of State employment service operations which indicate that in 1965, 39.2 percent of new job applications filed in local offices were filed by youth under 22

years of age -- an increase of 14.8 percent over 1964; 61.4 percent of all persons counseled in local offices were youth -- an 11.2 percent increase over 1964; but youth accounted for only 27.7 percent of all nonfarm placements made by the Employment Service in 1965.

To accomplish its objective of increasing the employability of youth, the Employment Service works closely with schools, community organizations, and all those interested in a cooperative effort to help youth bridge the gap between school and work.

Most of the 1,793,200 placements of youth in 1965 were in clerical and sales, service, and unskilled occupations. When consideration is given to the declining number of unskilled jobs that are expected to be available in the future, the need for concerted action to overcome youth employment problems becomes even more apparent. Illustration "A" shows the distribution of youth placements in major occupational categories covering nonfarm jobs.

RESOURCES FOR SERVING YOUNG WORKERS

In 1962, the U. S. Employment Service increased its staff serving youth and by 1964 had established a policy for implementing the concept of separate, identifiable youth employment services with specialized staff to serve youth throughout the entire Federal-State employment service system. While a few State employment services had long had separate youth units within local offices, this did not become a part of national policy until 1964. By September, 1966 (see chart) there were 157 identifiable youth employment offices known as Youth Opportunity Centers (YOC's). Of these, 129 were in locations physically separate from the local offices. In addition, there were 706 youth units in other local offices in areas not served by the YOC's. One or more trained counselors and other youth employment specialists are available in all Youth Opportunity Centers and in the local office youth units, to help youth in developing vocational plans and in finding suitable employment. In all, the equivalent of over 8,000 full-time positions have been allotted for youth activities in the Employment Service as of July 1966.

Vocational aptitude, proficiency, and interest testing services are available in practically all Employment Service offices to assist youth in selecting appropriate fields of work. The General Aptitude Test Battery, which was developed by the U. S. Employment Service, is recognized nationally as a valuable aid in vocational counseling. Other tools are being tried on an experimental basis for use with those having reading limitations. During 1965, 731,900 tests were administered by local offices of the Employment Service.

Extensive job market and occupational information has been developed by the Bureau of Employment Security and by the State agencies for use in local offices. This information is also useful to educators and guidance personnel in schools and colleges. Most of the Youth Opportunity Centers have libraries of occupational information and reference materials available for use by youth.

NOTE: As of September 1966, there were 157 YOC's in operation.

EMPLOYMENT SERVICES FOR YOUTH

The Employment Service conducts a number of activities, both in the YOC's and in the local offices, for meeting the employment-related needs of youth. The brief summations that follow deal with some of the historical background and objectives of these programs.

Services to High School Graduates

During the school year 1964-65, more than 633,000 school seniors in nearly 10,000 high schools took advantage of the youth employment program provided by the Employment Service. About 333,000 of them received counseling services, and more than 116,700 were placed in permanent jobs. Many others who located jobs through their own efforts also benefited from the help they received as a result of this program.

Employment services to high school graduates gained nationwide impetus in 1950 when a formal agreement was developed between State directors of guidance in State departments of education and State supervisors of counseling in the Employment Service. As a result of this agreement, which was updated in 1964, cooperative arrangements have been made for the State employment service agencies to provide counseling, testing, and job placement services to graduating students on school premises as well as in local offices. All seniors who plan to enter the job market after graduation may take advantage of these services during school time. Actual and potential dropouts may be referred to the Employment Service by the schools at the same time for appropriate action to help them stay in school or enter the job market.

Some seniors know the type of work they want, have trained for it, and need assistance only in locating a job. Others have given little thought to the kind of work they want to do or for which they are best suited and, therefore, need help in determining the most appropriate field of work to enter before embarking on the job search. To meet this need, the Employment Service provides counseling and supportive services in addition to helping this group find employment. These services are coordinated with the guidance work of the school counselors.

Seniors from schools not included in the cooperative program receive similar services when they come to the YOC's or local offices in those areas where no YOC's have been selected. The Employment Service has been able to assist youth from rural areas to locate jobs in urban centers, oftentimes remote from their home community, through cooperative arrangements between local Employment Service offices in small towns and cities.

A comparison of the following anticipated numbers of high school graduates for the years 1967 to 1976 with the figures in Illustration "C" gives an estimate of the magnitude of the task facing the Employment Service during this decade:

1966-67	2,629,000
1967-68	2,693,000
1968-69	2,791,000
1969-70	2,906,000
1970-71	3,010,000
1971-72	3,096,000
1972-73	3,172,000
1973-74	3,251,000
1974-75	3,319,000
1975-76	3,356,000

Services to School Drop-Outs

Reports from the 49 State Employment Services having formalized arrangements with schools showed that over 73,000 drop-outs were served in school year 1964-65. Over 27,000 placements were made for this group.

The cooperative school-employment service program to help drop-outs has not been as well developed as the program for serving graduates, since it has received national attention only since 1956 as compared with 1950 for the graduate program. It is estimated that the Employment Service serves only about 20 percent of the drop-outs through formal arrangements with the schools. More attention is being devoted to further developing the drop-out program in line with employment service emphasis on serving the disadvantaged. The Office of Education estimates a 25 percent drop-out rate in 1966. Most of these youth require services of the Employment Service.

In this program the school refers the potential drop-out to the YOC or local Employment Service office where he receives the attention of an employment counselor. The Employment Service counselor frequently consults with the school guidance counselor. The youth is encouraged to return to school if feasible; otherwise, efforts are made to assist him in his search for suitable work. If he will return to school, efforts are made to get him a part-time job. Frequently he needs group guidance, including instruction in the techniques of applying for work, as well as individual counseling.

ILLUSTRATION "C"

SERVICE TO H. S. SENIORS ENTERING THE LABOR FORCE
FROM HIGH SCHOOLS HAVING COOPERATIVE AGREEMENTS WITH
STATE EMPLOYMENT SECURITY AGENCIES
1961 - 1965

The employment counselor attempts to meet the needs of the drop-out in the most practical and effective manner available. Experience in serving drop-outs indicates that many of these youth require time-consuming service to a greater extent than school graduates. Some students leave school for financial reasons and need assistance in obtaining part-time work. Others are slow learners and must learn to master simple tasks before they can be placed in jobs. There are also large numbers who are hampered by language barriers, others by physical and mental handicaps. For some youth a delinquency problem is involved. To help individuals in all of these groups locate suitable employment and achieve satisfactory job adjustment often requires the combined efforts of many agencies. The recent work and training programs of Job Corps, Neighborhood Youth Corps, and MDTA have proven to be major resources for the Employment Service in increasing the employability of such youth.

Work-School Program

High schools conduct a variety of cooperative education programs in which the Employment Service has played an important role. In general, these programs provide for supervised work experience as a supplement to the school curriculum. The student may work one-half of each school day and attend school for the other half day, or attend school for a full week and then work for a full week. The objective is to better prepare youth for the vocations they will enter upon leaving school. Students usually work on a team basis with alternate assignments for each, which amounts to one full-time job being shared by two youths. The Employment Service cooperates with the schools by locating and developing work opportunities to which students may be assigned.

The particular emphasis in a work-study program depends upon the primary needs common to a particular group. One type of program may be designed for the potential drop-out, to aid him in gaining skills and work habits needed for entry into full-time employment. Another work experience program may be used to provide high school senior commercial students with practical experience to help them relate school training to the work situation. Some YOC's and other local offices recruit trainees for salesperson courses in vocational schools and, when the course is completed, place them with local firms. Similar cooperative arrangements exist for sewing-machine operators, machine-shop trainees, and gas station attendants, etc.

Services to College Graduates and Drop-Outs

Many college graduates utilize the placement services provided by the Employment Service network of professional offices located in principal cities throughout the country. Some colleges and universities provide campus facilities for the use of Employment Service staff to assist their graduating seniors in locating suitable jobs. Other college graduates are served by the local offices in their home towns. It is frequently more difficult for liberal arts graduates to find employment than for those trained in the professions. The Employment Service has developed a guide for relating major fields in the liberal arts and sciences to specific job families to help these college graduates in their job search.

College drop-outs often require the assistance of the Employment Service counselor in revising their vocational goals and in determining their future course of action. The nature of vocational goal changes varies as widely as the factors which cause people to drop out of college. Frequently, they are encouraged to enroll in technical courses which will enable them to function in a supportive professional setting without having full professional training. If the individuals are interested and their academic record indicates they possess the ability to complete their college training, temporary or part-time jobs may be secured for them until they are able to return to college.

Services to Rural Youth

The Employment Service program of services to high school graduates and drop-outs is as much concerned with rural as with urban youth, and thousands of rural high schools are served through this program. School and other guidance facilities are generally less adequate in rural areas, and Employment Service counseling and job placement services are, therefore, urgently needed. It is difficult, however, to provide adequate services to rural communities, because of their remoteness from local offices, without making special provisions. The Employment Service has developed a variety of techniques for reaching rural youth. In many States area counselors make weekly visits to small local offices to provide counseling service.

Staff members travel to rural schools and help youth decide whether to remain in the area or plan to go to an urban center. This necessitates guided migration of individuals to areas where jobs are available. Because of the wide distribution of local offices, the Employment Service is in a key position to expedite the movement of such youth from areas of labor surplus to areas where jobs are available.

The Employment Service has also organized mobile teams through its Smaller Communities Program for the registration of youth and other workers in remote areas. New training opportunities are thus made available to them, as well as referral to available jobs in urban and local areas.

The Public Works and Economic Development Act of 1965 and the Manpower Development and Training Act (MDTA) as amended, enable the Employment Service to evaluate the skills of job-seekers of all ages in rural areas of substantial unemployment, to recommend the establishment of training courses, and to take other action as needed to increase the employability of people and increase their opportunities for gainful employment. Rural youth benefit substantially by these laws.

Services to Handicapped Youth

The usual difficulties posed by lack of training and experience are compounded in the case of the young handicapped job-seeker. He often has had no opportunity to demonstrate his employability, and a

myriad of psychological and practical problems result. Also, handicaps occur more frequently in the lower income groups than in the general population.

Upon making application, the young handicapped applicant is referred to the selective placement specialist in the YOC or Employment Service office. The selective placement specialist is responsible for seeing that he receives all the special services necessary to cope with his employment problem. Counseling and testing are provided to establish a realistic vocational goal and a suitable plan for attaining this goal. Selective placement techniques match the physical and mental abilities of the applicant with the requirements of specific jobs.

Job development for the young handicapped person seeks to convince the employer that the unproven handicapped applicant is a good risk. The selective placement specialist may be able to suggest slight modifications in the work situation that will enable the applicant to do a certain job. Often the selective placement specialist needs to prepare both the applicant and the employer for the employment interview. After placement, followup determines how well the applicant has adjusted to the job as well as whether or not the employer is satisfied with his performance.

Some young handicapped individuals need services outside the scope of the Employment Service to help them compete in the job market -- such as training, education, and physical restoration. In such cases the selective placement specialist refers the applicant to appropriate community facilities and resources.

Selective Service Program

The Selective Service Rehabilitant program, begun in February 1964, is an outgrowth of the findings of the President's Task Force on Manpower Conservation, published in its report entitled One Third of a Nation. The Department of Labor's program offers counseling, referral to training and placement in jobs to those young men who have failed to pass the Armed Forces Eualification Tests. Through October 1966, over 661,500 rehabilitants had been contacted and some 130,171 interviewed by Employment Service staff. More than 149,621 of these were interviewed in the 73 examining centers across the nation since November 1965. About 95,377 have received counseling services.

Approximately 44,645 rehabilitants have been placed in jobs, enrolled in MDTA or referred to rehabilitation, health educational agencies, or to the Job Corps.

Job Promotion Campaign for Permanent Jobs

While services to youth is a year-round Employment Service activity, the annual campaign for permanent jobs in behalf of youth graduating from high school and college usually gets under way before March 1 and continues throughout the spring and summer. A concerted effort is made to find jobs for the new crop of young people entering the job market. In addition to individual job development, the following are examples of promotion activities in behalf of youth:

1. Intensive publicity campaigns through the press, radio, and television; direct mail appeals to employers; telephone calls and personal visits to employers; and speeches to citizen groups.

2. Cooperative job promotional efforts with local youth committees, civic organizations, labor and management groups, schools and apprenticeship committees, and the mayors' and governors' offices.

Job Promotion Campaign for Part-Time and Summer Jobs

Since 1965, the President of the United States has sponsored a summer job opportunity campaign among both governmental and private employers. An extensive information kit provides the guidelines for the yearly campaign launched by the Vice President and the Secretary of Labor. Cooperative arrangements for summer job programs are developed early in the spring with many high schools and colleges to find jobs for their students who want only summer or part-time work. Frequently the entire community lends its support to these job campaigns. Organizations such as the PTA or Junior Chamber of Commerce often sponsor such activities. Employment Service interviewers go to the schools to register youth for these jobs in offices, resorts, stores, and factories. Interested youth register with the Employment Service and employers are urged to list their needs with the Employment Service so that a maximum number of youth may obtain work.

The agricultural programs help thousands of young people each summer to obtain seasonal jobs in such activities as corn de-tasseling, hoeing, blocking, and thinning sugar beets, berry and fruit picking, and working in shade tobacco fields. There are three broad types of agricultural youth programs: The camp program, in which supervised camps are established where young people live when working on farm jobs; the live-in program, involving the careful matching of farm families and young people, since the youngsters live with the farm families who employ them; and the youth day-haul which provides for the daily transportation of young people from their homes to farm jobs.

IMPROVING AND EXPANDING EMPLOYMENT SERVICES TO YOUTH

The U. S. Employment Service is giving increased emphasis to providing more adequate services responsive to the needs of youth as they make the transition from school to work. More individualized attention is given the young job-seekers, particularly those experiencing the greatest difficulty in choosing, preparing for, and successfully entering suitable vocations.

Improvement of Supervision at Administrative Levels

A Division of Youth Employment and Guidance Services has been established in the U. S. Employment Service to provide improved technical assistance and more effective leadership to the State and local Employment Service offices.

A youth services representative has been appointed in each of the 11 regional offices of the U. S. Employment Service. He works with State agencies in developing their youth employment programs, and with the regional representatives responsible for counseling and for coordination of Employment Service recruitment of Job Corps enrollees. Each State has appointed a State supervisor of youth services and metropolitan area coordinators.

Local Office Personnel Devoted to Youth Services

The number of local office staff assigned to youth activities has more than tripled in the last few years. This staff has been selected on the basis of their training in vocational guidance, their interest in youth problems, and their knowledge of youth employment counseling and placement techniques. These employees are being provided intensive training in the unique problems of youth as part of the continuous effort to improve Employment Service capabilities for meeting the current and anticipated employment-related needs of youth. Local office representatives are stationed in schools, Community Action Program neighborhood centers and in settlement houses, among others, to provide counseling and placement services to youth who are reluctant to visit the local office or who live in remote areas. Some staff work in vocational schools to provide placement assistance.

Youth Opportunity Centers

Youth Opportunity Centers embody a new concept of employment services to urban youth. As separate youth employment offices, they give young job seekers a clearly designated place to go for services tailored to their individual needs, at a location convenient to them. By September 1966, there were 157 YOC's in 129 urban areas, serving nearly half the youth of the Nation.

The YOC's basic aim, once young people have been reached, is to help those who are ready to find jobs and to increase their employability through counseling and the use of available resources.

The YOC fosters a strong counselor-counselee relationship which assures continuity of service to each youth who needs intensive services. The counselor who initially establishes a relationship with the youth retains responsibility until vocational adjustment has been achieved.

Program Developments

Improved vocational and employment services are being provided for young people seeking full-time and part-time employment. Particular attention and efforts are being directed toward meeting the needs of the educationally disadvantaged youth and the hard-to-place youth who lack meaningful work-related experience. Experience has shown that through persistent individualized attention, personal appraisal, and with vocational preparation in work-training programs such as Job Corps and Neighborhood Youth Corps, most of these young people can be successfully placed in gainful employment.

More attention is being directed by the Employment Service toward school drop-outs. By working more closely with the school counselors, greater efforts are being made to help these youngsters remain in school. When this fails, employment counseling and placement services are provided.

Unemployment among youth is especially serious in the central and slum areas of large cities and in rural areas. For this reason, increased emphasis is being placed upon services to youth in these areas.

It has become increasingly important for the Employment Service to work closely with community organizations and youth employment advisory committees. The establishment of working relationships with existing local civic committees is encouraged and the Employment Service in many places has been instrumental in the establishment of new committees

Information Program

An information kit geared to youth employment problems has been developed by the U. S. Employment Service. This kit includes radio and television skits and announcements, suggested speeches, and sample letters to employers. In addition, visual and other guidance material is being prepared for this purpose. Most of these materials are intended for use by State and local employment services' offices. Guidance publications such as HOW TO GET AND HOLD THE RIGHT JOB, CHOOSING YOUR OCCUPATION, and JOB GUIDE FOR YOUNG WORKERS, have been widely used in youth services agencies and institutions and are continually in demand.

Selection of Youth for Training Courses

The Employment Service has referred thousands of youth for training in occupations offering entry opportunities. In addition to selecting and referring youth to training courses, the Employment Service also assists in placing individuals who have completed the training. This requires close cooperation between the local Employment Service offices and the training institutions. The Employment Service also has furnished information useful to training facilities

in the development of appropriate training programs. Over a quarter of those trained through the Manpower Development and Training Act have been youth, but referral of individual youth to regular vocational training, day or night as well as to on-the-job training has always been part of Employment Service activity.

Group Guidance

Staff in Youth Opportunity Centers and in youth units in other local offices conduct various types of group activities which utilize the cooperative, supportive, and economical values of group situations. Under the leadership of individuals who are trained and skilled in the use of group methods, such activities have been employed effectively to convey commonly needed information and to stimulate the exploration of common problems. While the participants are encouraged to interact and to learn from each other as well as from the group leader, group activities are used in youth employment services to complement but not supplant individual counseling by capitalizing upon the economic and psychological advantages of group methods in the achievement of individual goals.

Institutes on group counseling techniques have been held at various universities across the country to encourage similar programs and utilization of this valuable method throughout the Youth Opportunity Centers.

Research

Following are only a few of the areas in which additional knowledge would help the practitioner responsible for helping youth become occupationally adjusted.

Research is needed to assess the benefits of individual counseling for various groups of youth and the effectiveness of group methods in meeting the vocational adjustment needs of selected youth.

Research is needed to identify the developmental stages at which various groups of youth are responsive to various vocational guidance methods, including counseling.

Much more needs to be known about the role and function of employment (the job) in the development of youth.

Research could well be conducted on the place of occupational and related information in the vocational development of various groups of youth.

Generally, much more needs to be known as to what is crucial in vocational adjustment.

Developing Human Resources, A Report of Progress in New Jersey Vocational-Technical Education Since January 1965.

New Jersey State Dept. of Education, Trenton. Div. of Vocational Education
MF AVAILABLE IN VT-ERIC SET.
Pub Date - Jan67 43p.

*VOCATIONAL EDUCATION; *TECHNICAL EDUCATION; *STATE ACTION; *STATE PROGRAMS; *STUDENT ENROLLMENT; PROGRAM DESCRIPTIONS
NEW JERSEY

This report records the progress in New Jersey in vocational education accomplished since January, 1965 when the new state plan for vocational education became effective. Cooperative office education programs have increased from 15 in 1964 to over 100 in 1966; cooperative industrial education programs, from 5 in 1963 to 150 in 1966. In 1964, there were 86 high school students enrolled in health occupations programs; in 1965-66, a total of 214 high school students were enrolled. Newer programs in industrial arts, after the first year of operation in 1965-66, increased from 1,966 to 3,150 students. Introduction to Vocations, a pilot program in 26 high schools, has been organized as part of the over-all education and training of ninth grade students to aid them in understanding their possible choices of a logical vocational career. In distributive education, 34 new pilot programs were established. (PS)

The Division of Vocational Education

New Jersey Department of Education
Trenton, January 1967

Foreword

This is a report of the outstanding record of progress accomplished in New Jersey in vocational education since January 1965 when the new state plan for vocational education became effective.

The need for expanded vocational education was made clear in a report of a Blue Ribbon Committee of leading citizens to the State Board of Education in October 1964. The Committee made 20 specific recommendations and these became our guidelines for action. This report cites some highlights of progress made in the last two years in applying these guidelines and also indicates projections for future growth.

Increased awareness of the need for occupational training, State appropriations, new federal legislation and positive action by the State Board of Education are all part of the driving forces behind this achievement. In his fifth annual message to the New Jersey Legislature in January 1967, Governor Richard J. Hughes stated, "State and Federal appropriations have made possible the rapid expansion and improvement of vocational and technical education programs. Enrollments have more than tripled for secondary and post-secondary youth and adults in the past three years. Cooperative vocational education, which provides school and work experience for high school students, has been assisted by more than 4,000 New Jersey companies in providing training stations in more than 130 different job classifications. Six multi-occupational skill centers have come into operation. Over 15,000 students who were not enrolled in vocational education a year ago are now receiving education and training for employment in more than 350 pilot projects."

It should be pointed out that the accomplishments described herein represent only a beginning. There is much remaining to be done. More programs, more teachers, more facilities, and more funds (State, local and federal) are urgently needed. In the present school year, for example, an estimated 70,000 boys and girls in New Jersey schools who could have profited by vocational training were denied the opportunity due to a lack of facilities. In addition to meeting present needs, our findings indicate that the greatest increases in the New Jersey labor force, through 1970, will be in the age groups where vocational education can do the most good.

The support and effort of many individuals and groups have made possible the growth of vocational-technical education in New Jersey since the implementation of the Vocational Education Act of 1963. With this continued support and cooperative effort our record of progress in vocational education can continue to move ahead to the mutual benefit of all — our children, our communities, our State, and our Nation.

January 1967

Robert M. Worthington
Assistant Commissioner of Education
Division of Vocational Education

Business and Office Occupations

Business and Office Occupations Education is a vocational education program designed to prepare students for office work. The program includes all the required general education courses such as English, mathematics, the sciences, and their electives. In addition, each student follows an individual sequence in office education and related courses which leads to vocational competency and advancement in office careers.

Prior to the passage of the federal Vocational Education Act of 1963, business education did not fall within the scope of federally subsidized vocational education programs. In fact, business education was not widely categorized as vocational—even by business educators. Educational interests were largely academic and only a small number of pupils were afforded skill development in vocational business education. In addition to the limited numbers trained, there existed a similar limitation on skill areas treated. Only 15 cooperative office education programs (provision of classroom instruction accented by simultaneously offered practical job experience) were in existence in New Jersey in 1964, a majority of which lacked vital teacher coordination and supervision.

Through funds provided under the 1963 federal Act and matching State funds, business and office occupations education classes today serve nearly 150,000 students in all the secondary school districts. Over 100 cooperative office education programs are now in existence and the number of business teachers approximates 1,800. Pilot and model programs designed to strengthen entry level occupational skills of high school students have been initiated in New Jersey schools in the areas of stenography, bookkeeping, secretarial and clerical practice, business machines operation, modern duplicating methods and electronic data processing. Concurrently, experimental instructional approaches have been undertaken involving stenography, office practice, and electronic data processing.

Education

Rapid technological developments in research and production are causing widespread changes in technical occupations. Traditional occupations are being changed through the application of electronics, instrumentation, data processing and computers with the result that many new employment opportunities are emerging. It is the consensus of specialists in the field that technical education will continue to provide a significant source of vital manpower in the decade ahead and, further, that this area will occupy a most important place in the total national educational program.

Introduction to

Introduction to Vocations is a pilot program in 26 New Jersey high schools. It is organized as part of the over-all education and training of ninth grade students to aid them in understanding their possible choices of a logical vocational career. It is a regularly scheduled subject-course in the school curriculum.

Besides classroom instruction in the informational units by a counselor or an Introduction to Vocations teacher, students are scheduled for three to four week periods in industrial arts, home economics, business education, and the science laboratory facilities for manipulative, exploratory experiences. Job awareness is encouraged through field trips. speakers from business and industry and personal interviews.

It is anticipated that Introduction to Vocations will spread from the original 14 schools in 10 counties in 1965 to nearly 300 high schools in all 21 counties by 1975. During the next decade, student enrollment in this program is expected to increase from 800 to 12,000 and the number of local staff involved from 156 to 500.

As future Introduction to Vocations projects in pilot school districts are developed, it appears likely that the schools will combine current

Industrial Education

Under these programs, the following areas may be included:

— Orientation to vocations, tailored to specific pupil needs.

— Occupational conditioning in which students meet realistic job situations through in-school experiences.

— Training in a variety of simple and complex skills depending on individual pupil abilities.

— Placement in jobs in one of the three levels of Cooperative Industrial Education, cited above.

As these work experience programs continue to grow, it is anticipated that the need for better pre-vocational training will become apparent to both educators and personnel in industry. Efforts are already underway to expand vocational preparation — particularly for pupils with special needs, such as the handicapped or brain-damaged.

Health

Health Occupations education prepares high school students and adults for entry level employment in the health field. Occupational areas of training include practical nursing, nurse aide/orderly, dental and medical assistant, and hospital service worker. Whenever a health occupations program is offered, the student has, as a part of the educacational program, a clinical affiliation with local health agencies (hospitals, clinics, medical and dental offices). This experience is supervised by the school instructor to insure that the experiences in the clinical area are educationally oriented.

In 1964, there were 86 high school students enrolled in Health Occupations education programs in New Jersey. Previously, existing programs in Practical Nursing, Medical Assisting and Dental Assisting prepared adult students to enter these occupations. In 1965-66, a total of 214 high school students were enrolled in Health Occupations educational programs. There are several reasons for this increase:

1. Eight Practical Nursing programs now include high school students at the 12th grade level.
2. Demands for Practical Nurses have increased sharply due to Medicare legislation.
3. Additional programs in other areas of

and Training

technical schools and comprehensive high schools in order to provide more flexibility in occupational offerings and related services. The Division of Vocational Education has supervised the development and establishment of these centers.

In addition to the six independent centers, multi-skill programs have been developed in the Essex County Vocational-Technical Schools, Passaic County Vocational-Technical Schools, and the Newark Public Schools.

Currently under development are three rural multi-skill centers, in cooperation with the Office of Economic Opportunity, to serve disadvantaged persons in Monmouth, Cumberland and Warren Counties.

To supplement these centers, numerous single class-size occupational training programs have been introduced throughout the State — in vocational-technical and comprehensive high schools, private trade schools, private business colleges, correctional institutions, and public and private hospitals.

With the cooperation of the U. S. Bureau of Apprenticeship and Training, pre-vocational and basic education courses are being administered to trainees prior to their entry in on-the-job training or into selected apprenticeable trades. Other efforts include a refresher program for registered nurses, directed by the New Jersey Hospital Trust Association; the training of merchant marine engineers conducted by the Brotherhood of Marine Officers; basic education and occupational training in the New Jersey Reformatory at Annandale, with the cooperation of the Department of Institutions and Agencies; machine trades training programs for students prior to their entry into an apprentice training program, supervised by the National Tool, Die and Precision Machine Association, and the New Jersey Tool & Die Association; and a joint training program in basic education and occupational skills in Newark, with the cooperation of the United Community Corporation. The Division of Vocational Education is responsible for the approval, administration, and/or supervision of all the above programs.

Subject to continued availability of Federal funds, further refinements in this program will continue to be made in basic education and pre-vocational education as well as in other areas to better meet the needs of unemployed and underemployed youths and adults in New Jersey.

Technical

Technical education is offered chiefly at the post-high school level. It is designed to prepare students for various positions in technical or scientific enterprises, requiring the application of scientific and engineering knowledge. The graduates of such post-high school programs are usually referred to as technicians or semi-professionals. They work in support of engineers or scientists.

The accompanying chart indicating New Jersey students enrolled in technical education programs depicts the continuing growth and extent of participation in this area. Technical education is now offered in only a limited number of our public schools. As a result, the number of individuals presently enrolled in these programs represents but a small fraction of the great potential that can and should be accommodated.

Additional growth in this important field will depend largely on the broad acceptance of vocational-technical education, particularly at the local district level. Expansion of the needed, diverse, technical areas will also be determined by the readiness and ability of the schools to provide essential, updated, physical facilities, the recruitment of appropriately qualified administrators and teachers, and well-designed curriculums.

Vocations

ninth grade exploratory-orientation programs and guidance activities into this more comprehensive, direct experience approach. As more activities are introduced at the high school level to help children develop more realistic awareness of occupational opportunities, related curriculum offerings and instruction will also be benefited.

The enthusiasm with which school districts in New Jersey have endorsed the Introduction to Vocations program underscores its pertinence for preparing youth to enter the labor world while assisting the individual student in achieving an occupational objective.

Distributive

Distributive Education provides training in distributive, marketing and sales occupations. Training and experience are given under a cooperative agreement between the employer and school officials. This agreement insures that the training program is conducted in such a way that students will supplement their practical training with a program of related instruction. Students go to school part of the day and work for pay for local businesses, as a learning experience, the rest of the day.

Distributive Education occupations are found in such businesses as retailing, wholesaling, finance, insurance, real estate, transportation, utilities, and communications.

The program has been developed to serve the education and citizenship needs of students and adults within the framework of their career goals. Students may prepare themselves for entry into the labor market, for upgrading themselves in their occupational specialization, or for transfer to better salaried employment.

The population explosion will cause an increase in business services and therefore more qualified employees will be needed. Recognizing the increased need for more workers with distributive

Occupations

Health Occupations education have been offered to high school students.

Coincidentally, the number of adults enrolled in these programs has also continued to increase.

The need for workers in Health Occupations will continue to grow due to the lengthening life span, increasing population, Medicare legislation, extended care facilities and increased scientific and technical innovations in medicine and allied fields. New health occupations will appear and students will be prepared for entry into these areas. Many of these programs may be offered at Health Occupations Training Centers providing a diversity of courses and serving large geographic areas.

Industrial

Industrial Arts education deals with exploration of industrial occupational opportunities. It provides experiences with a wide range of materials, tools, processes, products, and occupations typical of our industrial society. It orients students through study and experience in school shops and drafting rooms to the industrial aspects of our culture enabling them more intelligently to select consumer goods, to be more efficient producers, to use leisure time more wisely and to act more intelligently with regard to matters of health and safety in an industrial setting.

A trend in Industrial Arts education at the secondary level is the shift in emphasis from a broad general industrial concept to a program that offers depth in occupational families; for example, drafting, electronics, or metal working. Newer programs in Industrial Arts require shops with greater floor space, equipped with more industrial power and hand tools, and taught by personnel with greater depth of industrial experience and education.

Industrial Occupations

Industrial Occupations education is a program designed to provide employment-bound secondary school youth with basic skills, knowledge, training and adaptability necessary for entering a semi-skilled or operative industrial or service occupation. Successful entry into the world of work is the major goal. Most teachers in this area possess both advanced training and industrial experience. A combination of Federal and State funds has made these multi-track offerings possible on a pilot basis in about 100 schools through-

Arts

out New Jersey.

The number of students in Industrial Occupations education programs has nearly doubled after the first year of operation in 1965-66, with an increase from 1,966 to 3,150 students. A 50% enrollment increase is anticipated for 1967-68. Industrial Occupations programs are planned to serve students in grades 11 and 12.

In this program, existing comprehensive high school shop facilities and courses are up-graded and extended in order to provide practical learning experiences that are geared to current and anticipated labor market demands. Industrial Occupations courses also provide an effective foundation for those seniors who desire to participate in Cooperative Industrial Education programs (described in another section of this publication).

Manpower Development

The Manpower Development and Training Act of 1962, as amended, provides for occupational training and retraining of unemployed and underemployed youth and adults. Since 1962, MDT programs in New Jersey have served approximately 19,000 individuals. Some typical occupational areas provided include: oil burner installation, meat cutting, automobile mechanics, radio and television repair, machine operation, upholstering, commercial cooking, and key punch operation. Nearly $25 million in federal funds have been committed for the total MDT program in New Jersey in the last two years. Funds are used for staff, equipment, facilities, and other related items.

Because of the great number of disadvantaged persons to be served under the Act, recent amendments have authorized funds for supportive services in several additional areas: basic education as it relates to the trainees' selected occupation; personal and vocational counseling; psychological assistance; and limited health services.

Since 1965, six multi-occupational skill centers have been created in New Jersey: Tri-County in Salem County; Camden; Trenton; Newark; Jersey City; and Hackensack. These six training centers are conducted in facilities independent of existing county vocational-

Education

skills, an expanded Distributive Education program, which will serve grades 9-12, is anticipated by the Division of Vocational Education. With the assistance of federal funds, the Distributive Education program will continue to grow in New Jersey over the next decade.

Post-high school, junior college, college and adult distributive education training programs have also been developed in order to provide out-of-school youth and adults with opportunities to develop distributive skills. Distributive Education programs are also provided by parochial schools, MDT skill centers, and four New Jersey colleges: Montclair State College, Rider College, Rutgers - The State University, and Trenton State College.

Apprentice

Through apprentice training an employee and an employer join together for an educational relationship. Its objective is to help insure a continuing supply of skilled craftsmen needed to further the technical, social and economic standards of our democratic society. The program consists, basically, of specific training on the job and related instruction in the classroom.

There has been a significant increase in the number of programs, students and instructors involved in apprentice training in New Jersey since 1964. The number of trades and occupations for which related instruction is being offered has increased from 43 in 1964 to 49 in 1966. Currently, there are approximately 6,000 individuals registered for apprentice training in New Jersey.

Student enrollment is voluntary and apprentices must complete 144 hours of trade-related instruction.

In the future, the need for skilled craftsmen, especially in the machine, electro-electronic, and building trades, will lead to an expansion of the apprentice training program. The rate with which mechanics and technicians are trained will directly affect the growth of our industrial society.

Education

Business Education—Tomorrow

In the future, business education will concern itself with the provision of programs for a growing segment of the school population — the employment bound. Such programs will fit the changing demands and requirements of business, changing occupational patterns, and advanced business technologies. Curriculum patterns and instructional methodologies must necessarily be revamped.

Supplementing the traditional stenographic, bookkeeping and clerical needs, emerging occupational demands in-include:

. . . accounting and computing
. . . business data processing systems
. . . records management and retrieval
. . . personnel training
. . . supervisory and administrative management

These demands will be realized through:
. . . expanded vocational facilities and equipment provided by secondary schools, post - high schools, vocational schools, technical institutes, private business schools and colleges.
. . . expanded teacher preparation programs embracing the new technologies.
. . . expanded secondary school offerings.
. . . increased realistic learning experiences for high school students as provided through cooperative occupational programs. (At least 200 of New Jersey's secondary schools can support such a program.)
. . . increased involvement of business and industry in our educational programs.

Cooperative

New Jersey's Cooperative Industrial Education programs are designed to help the student make a transition from school to work. In this program the student goes to school part-time and works a specific number of hours in an approved industrial occupation, receiving school credit as well as valuable job experience and a financial return.

The Cooperative Industrial Education programs have grown very rapidly in New Jersey in the last three years. In September 1963, there were five approved programs with 108 students. In successive Septembers, the numbers of approved programs rose to 13 (with 260 students), 50 (with over 100 students) and in 1966, 150 programs (with about 1,900 students).

New Jersey was one of the first states to recognize the need for varying types of cooperative programs. Three distinct programs were developed as follows:

1. *Part-Time Cooperative Trade Occupations Program,* designed to prepare students for entrance into trade employment. This program has been structured for those students capable of becoming skilled craftsmen.
2. *Part-Time Cooperative Industrial Occupational Training* embracing similar objectives as the Trade program cited in 1, above. This program has as its emphasis, training in quickly learned skills; i.e., bagger, assembler, office messenger, packer.
3. *Part-Time Cooperative Employment Orientation Program* designed for educable (mentally retarded) students. This program, too, involves quickly learned skills and emphasizes adjustment from full-time school to full-time employment.

Vocational Guidance

The aim of Vocational Guidance is to help the student explore, and successfully engage in, school experiences that will best serve him and his future career needs.

Through counseling, orientation programs, testing and other activities, the counselor provides the student with a background so he can develop future plans and make decisions concerning educational and occupational choices.

The counselor also assists the student to evaluate how well he progresses as he carries out his plans.

Counselors in New Jersey schools are starting to direct greater emphasis to vocational guidance for pupils through a variety of approaches and activities including:

- Visitations to business and industry.
- Assistance with the placement of students in part-time and full-time employment.
- Talks by people representing different trades and careers.
- Cooperation with other staff members so that vocational aspects of school subjects are highlighted.
- Meetings with parents and with community groups to review occupational opportunities for students.
- Orientation to vocational education programs.

Vocational

The Work-Study Program is designed to reach vocational students, ages 15-20. This program was designed to give financial aid to needy students who perform work for local public agencies. In the performance of this work, the student receives valuable training by working with mature people. A frequently heard comment from districts participating in this program is that the students have also progressed academically and maintain a close relationship with the school.

The Work Study Program was first started in New Jersey in January 1965, at which time 44 schools participated with 576 students receiving wage benefits.

Veterans Training

The Division of Vocational Education is the approving agency for vocational schools and courses for veteran enrollment under the new and former G. I. Bills. The so-called Cold War G. I. Bill — P.L. 89-358, became effective on June 1, 1966. It gives educational entitlement to men who have served and will serve in the Armed Forces after 1955. The approval of schools, public and private, and their courses must be in conformity with the provisions of the Federal law and the Veterans Administration regulations. This requires consultation with school officials, visits to the schools and evaluations of facilities and courses. It also requires cooperation with the Veterans Administration on interpretation of regulations and violations of approval criteria.

Veteran training includes courses in public vocational schools, private trade and private business schools, as well as private beauty culture schools and hospital training programs.

The number of veterans currently taking advantage of their educational entitlement is impressive. It is expected that the number will double within the next few months. There is no doubt that the new G. I. Bill, which is expected to continue well into the future, will make an impact upon vocational and technical education in both the State and the Nation.

Agricultural

Agriculture education offers training to the future farmer, horticulturist, floriculturist, forester, conservationist and the person who will be employed in support of the farmer. Its training embraces preparation for employment in areas dealing with the conservation, production, processing and distribution of agriculture products, and related services. Fisheries occupations are also included in this field.

New Jersey, "the Garden State," still occupies a leading position in agricultural endeavors. Our farm lands return the highest income per acre in the nation; we rate third in gross income per farm, and sixth in net income. New Jersey boasts a $1.7 billion industry in food processing — sixth in the nation.

During 1961-62, supervised farming activities outside of school hours returned to high school students over $400,000, an amount nearly double the combined 1962-63 state and federal subsidy of $242,000.

Agricultural education, on both the secondary school and adult levels, has been offered in New Jersey, without interruption, for the past fifty years. Since 1928, an integral part of this educational program has been the rural leadership and citizenship training afforded through the Future Farmers of America organization.

Less than ten percent of the secondary schools in the state now offer programs in agricultural education. Increased availability of this curriculum to more students interested in agriculture could easily double the enrollment within the next two years. A continuing need in agricultural education has been obtaining sufficient teaching staff and adequate facilities.

State and federal funds are being expended in a major effort to retain and strengthen the program in agricultural education. Training opportunities have been made available in agri-business and distribution, ornamental horticulture and floriculture,

Education

turf and golf course management, greenhouse and nursery management, and commercial fisheries. These programs first were funded as pilot projects in five school districts in 1965-66, and both the programs and number of participating school districts were expanded in 1966-67. In one vocational school, agricultural education is offered to students from four nearby local high schools on a coordinated basis.

The need for agricultural education in the future will continue. For example, New Jersey and many of its municipalities are sponsoring the Green Acres Program while the federal government is similarly engaged in developing and maintaining our national parks to provide recreation for our rapidly expanding population. Such investments require trained recreational conservationists to service these areas. The emergence of these and other new and expanded employment opportunities will necessitate related agricultural education programs in our schools.

Research

The Occupational Research and Development Branch was established in the Division of Vocational Education, New Jersey State Department of Education, on June 1, 1965, as a result of a grant from the United States Office of Education. Its purpose is to coordinate, stimulate and encourage occupational research and developmental activities within local school districts, colleges and universities, non-profit organizations, and the State Department of Education. A second and equally important function is to serve as a clearinghouse for information related to occupational research and development.

The Research Branch is currently participating in several projects of a national scope including the Vocational-Technical Education Evaluation Project, coordinated by Ohio State University, and the project on Research and Development in State Administration of Vocational-Technical Education, conducted by the University of California (Berkeley). Additional undertakings include: a cooperative project with the New Jersey Police Training Commission to develop new instructional techniques and media in police training; research in basic educational skills at the Newark Manpower Training Skills Center; and direction of the development of a master plan for vocational-technical education in New Jersey.

The Occupational Education Pilot Projects referred to in another section of this publication are part of the developmental function of this Branch. During the past two years, more than 350 pilot projects involving local high schools, vocational-technical schools and several colleges, both public and private, have been initiated.

Plans for the future include continued stimulation and coordination of occupational research, development of information acquisition and dissemination systems, and concurrently, the development of research and improved instructional materials relative to occupational curricula.

The Technology for Children Project

An experimental two-year project was started in 1966 in nine New Jersey elementary schools. It was financed in part by a $166,000 Ford Foundation grant to the State Department of Education. The Technology for Children Project, as it is called, is the first of its kind in the Nation. The project will help teachers to combine technical activities with regular academic lessons in an attempt to help children learn and understand their regular subjects better while developing an appreciation of the role of technology in our society.

Elementary pupils will be introduced to technical concepts such as design, instrumentation, the uses of tools, and properties of materials. They will be shown first-hand, from the time they enter school, how technology when applied to subjects they regularly study is used in the world around them. Using tools and materials, the children may build a sun dial, print their own stories, or construct small rockets. They may conduct experiments in electricity, refrigeration, or papermaking. Field trips to acquaint pupils with different occupational areas and related concepts are also included. Telephone repairmen, carpenters and others are asked to explain their work and give demonstrations; these experiences are then related to the children's other studies.

If successful, the program will be extended to other schools in the State.

Private

Private business schools, proprietary profit-making institutions, emphasize instruction in secretarial practice and accounting or the development of skills in the expanding area of business data processing. They have as their objective providing the labor market with skilled workers for office positions. In the 60 state-approved schools, instruction is provided year-round, day and/or evening, in the areas of accounting and bookkeeping, business administration, data processing, computer programming, general business, office machines, office practice, stenography and typewriting.

The schools are located throughout New Jersey but the majority are located in the Newark metropolitan area.

The most recent enrollment figures available, those reported in 1966, indicate an almost equal distribution of full-time and part-time as well as male and female students. These 6,000 students consist primarily of recent high school graduates, adults returning to school for retraining, and veterans eligible under the new G. I. Bill.

Business Schools

Situated in the center of the Washington-Boston megalopolis and serving such metropolitan centers as Philadelphia, Camden, Newark, and New York City, New Jersey is in a key geographic position to supply the labor market with office workers of all types.

Private business schools will continue to both grow in number and to expand their offerings. Related to this is the necessary constant up-grading of curricula and instructional equipment to meet the ever-changing demands of business and industry. The labor demand for more office workers is increasing and these demands cannot be met by the public schools alone. Further, the private schools assist in the development of additional essential skills and afford students with an opportunity to develop poise and personality as well as general maturity.

It is projected that within the next decade, there will be more than 120 institutions serving nearly 14,000 students and providing employment for approximately 850 teachers.

A First in the United States . . . .

The Marie H. Katzenbach School for the Deaf at West Trenton is the site of a particularly unique vocational program in Visual Communications Technology (the first such program in the United States for handicapped youth, grades 11-14).

Visual Communications Technology, in essence, is an enriched program approach to graphic arts education.

Previously, the Marie H. Katzenbach School had a graphic arts program characterized by moderate equipment, skilled instructors, and an effective but more limited program. Traditionally, its graduates enjoyed 100% employment upon graduation; however, many were underemployed considering their talents, interests and desires.

Through the new, enriched program, emphasis is on increased course offerings which give added depth to the vocational area. More boys are enrolled than previously and girls are also included in the program.

As a result of the new program:

. . . related academic instructional offerings have been increased.

. . . graphic arts facilities and media, including motion pictures, slides, film strips, and overhead transparency production, have been expanded.

. . . related vocational programs in basic mechanical drafting and electronic and architectural drafting have been strengthened.

. . . the scope of Communicative Art and Design, featuring commercial and industrial displays as well as layout and design, and photographically executed silk screening, has been broadened.

. . . the instructional staff has been expanded. Teaching assistants and student teachers through the Industrial Education and Technology Department of Trenton State College work with the project, and consultant services of the College's professional staff are made available.

. . . new processes of cold-type composition are being taught.

. . . the latest photographic equipment has been installed.

TURN the WHEELS of PROGRESS
with
VOCATIONAL EDUCATION
VOCATIONAL DIVISION · NEW JERSEY STATE DEPARTMENT OF EDUCATION
R.C. Maxwell Co. Trenton N.J.

Vocational Education in

- Pilot programs in eight vocational areas have been developed and are operating in —

Agriculture	Home Economics
Business Education	Industrial Occupations
Distributive Education	Introduction to Vocations
Health Ocupations	Technical Education

- In Agriculture, present school programs were broadened to include training for agri-business and distribution, ornamental horticulture and floriculture, recreational conservation and forestry, and food processing.
- In Business Education, model business education centers were established in 15 counties, pilot studies in the use of electronic equipment for stenography classrooms were initiated, and 85 cooperative work experience programs were added.
- In Distributive Education, 34 new pilot programs were established and distributive education curriculums were initiated on the college level at Rider College and Trenton State College.
- In Health Occupations, 4 new practical nursing programs were initiated and guidelines were developed to assist schools establish programs for nurse aides, hospital workers, and medical and dental assistants.
- In Home Economics, diversified occupational training for students from low income levels was provided and programs were started to prepare students as child care center assistants and for food service occupations in commercial kitchens, hospital dietary kitchens and nursing homes.
- The Division was designated by the Governor as the State approval agency for appropriate educational provisions of the new G. I. Bill.
- The development of a Master Plan for Vocational-Technical Education in New Jersey was initiated.
- The Division actively participated and provided leadership in the 1966 Governor's Symposium on Education and Training for Employment.
- The continued expansion of county vocational schools was encouraged.
- Four completely new programs, serving a total of 25,000 students, were developed in:
  - Cooperative Industrial Education
  - Industrial Occupations
  - Introduction to Vocations
  - Vocational Work-Study

New Jersey Since 1964

- To date, 19,000 New Jersey citizens have been served through the Manpower Development and Training Program. Prior to 1965, there was only $3 million obtained for MDT training. In the last two years, nearly $25 million has been committed for new programs. Six new multi-occupational skill centers are in operation. Three multi-skill programs and three rural multi-skill centers have or are being developed.
- Teacher education, including industrial arts and vocational guidance, were strengthened and expanded in vocational-technical education at the college and university level, in both public and private institutions:

  Glassboro State College
  Jersey City State College
  Montclair State College
  Newark State College
  Rider College
  Rutgers - The State University
  Seton Hall University
  Trenton State College

Future Goals and Needs

More students and adults to be served.

Extension of current programs at all levels and types of schools.

More buildings, facilities, and equipment.

Introduction of new programs and pilot projects.

More college training programs and instructors.

Continuation of research, evaluation, and experimentation.

Strengthening and improvement of vocational guidance services.

Development of more programs for disadvantaged, unemployed and underemployed persons, and youth with special needs.

Establishment of more programs at the post-high school level.

Continue cooperation with business, industry and labor.

Development of orientation and pre-vocational programs at earlier levels.

Completion of State Master Plan for Vocational-Technical Education.

Maintain quality and high standards of current efforts.

Develop a placement system in high schools for employment bound students.

Pilot and Demonstration

The Occupational Education Pilot Program was established through funds made available by the State and under the Federal Vocational Education Act of 1963. This program is designed to initiate, strengthen, and expand vocational experience opportunities for high school youth by offering entry level job skills and information. Projects may involve occupational skill instruction, occupational curriculum development, and the development of innovative occupational teaching aids.

During the past two years, 352 action type research pilot projects involving local high schools, vocational technical schools, and several colleges (both public and private), have been initiated. The breadth of program areas covered by these pilot projects is graphically displayed on the opposite page. The majority of the programs seek to provide new experiences in saleable skills for students with special needs.

Other projects, including programs establishing Model Business Centers, Electronic Stenography Research, and a Distributive Education Leadership Training Program were implemented within the Division of Vocational Education and in some instances through cooperative efforts with several colleges.

Unique programs are those in Package Line Mechanics and Visual Communications Technology. The first program seeks to train mechanics for the maintenance and repair of industrial packaging equipment. The second program involves students at the Marie H. Katzenbach School for the Deaf, West Trenton, in skill train-

Programs

ing in the technological aspects of advertising production, graphic design, commercial and industrial photography, drafting, and printing and offset duplication.

More than 150 New Jersey school districts have utilized State and Federal funds to initiate new concepts and innovative instructional procedures in occupational education. Many students in current and future projects who need programs of an occupational nature will, through these pilot and experimental programs, gain valuable preparation for assuming their place in the employment market. It is expected that many more unique and innovative programs will be proposed in the future by local school administrators and approved by the State Board of Education.

Home

Home Economics education has two major program aspects:

— the preparation of elementary, junior and senior high school students, and adults for successful and satisfying home and family living, and

— the preparation for occupations which utilize home economic skills, knowledge, and appreciations.

Home Economics programs in the schools may include:

Child care and development
Textiles
Clotning and personal appearance
Foods and nutrition
Family health and home safety
Housing, equipment, and home furnishing
Personal, family and community relationships
Personal and family economics
Consumer education
Home management

Economics

In the past two years, increased emphasis on comprehensive home economics programs has stimulated the broadening of programs to meet the needs of more of our students.

Because of the growth of Home Economics programs at the elementary, junior high school, senior high school, and adult education levels, more professional personnel are needed. At present, Glassboro State College, Montclair State College, Douglass College, and the College of Saint Elizabeth are the colleges preparing home economics teachers in New Jersey.

Public Information Concerning Vocational Education

The Division of Vocational Education has attempted to inform the State's many "publics" about new programs, trends, approaches, and developments in Vocational Education in New Jersey. This information is presented through news releases, monthly and quarterly bulletins, brochures and pamphlets, and by means of correspondence, speaking engagements, and staff participation in conferences and workshops.

In 1966, the Division of Vocational Education and Rider College joined in a venture to create a Pilot Public Information Unit. The primary purpose of this unit is to promote and enhance the image of Business and Distributive Education. To accomplish this, students, parents, guidance personnel, and school administrators have been made more familiar with these educational programs through speakers, career days, and publications. The public schools in Mercer County have served as the primary experimental group with some information being distributed to schools throughout the state. Thus far, over 5,000 students, mainly at the junior high school level, have participated in career programs conducted by this unit.

Work-Study Programs

During the summer of 1965, the Work-Study Program was continued and the students worked a forty-hour week. This benefited a total of 1,250 additional needy vocational students.

In September of 1965 there were a total of 118 districts participating in the Work-Study Program with 1,915 students employed by public agencies.

In spite of a 60% cut in federal funds in September 1966, 92 of 118 participating New Jersey high schools elected to continue this program although they must now shoulder 25% of the students' wage costs.

Private Trade Schools

Private trade schools have been established in New Jersey for more than two decades and have developed into dependable educational institutions. Over the years these schools have trained many people presently serving in the trades and technologies and they have made a definite contribution to vocational education in this State. Currently, there are 39 private trade and technical schools in New Jersey with an approximate enrollment of 5,500 students in 40 trades. Vocational areas include mechanical dentistry, welding, musical instrument repair, automotive repair, diesel or oil burner servicing, drafting and design, electronic technology, and many others.

Each school is approved on an annual basis by the Division of Vocational Education, thus requiring a renewal each year.

A most significant development in the field of private trade schools is the formation of the National Association of Trade and Technical Schools two years ago. The owner of one of New Jersey's private trade schools was the moving force for the formation of this association. Within the past few months this association has established an Accrediting Commission, separate and distinct from the school association, with top level personnel to evaluate and rate those schools wishing to be accredited. It is expected that this Accrediting Commission will receive the recognition of the U. S. Department of Health, Education and Welfare. Among the first group of schools to apply for evaluation were four New Jersey private trade schools.

Some New Jersey Firsts in the Nation

There are many developments in the field of Vocational Education which were accomplished during the last two years that established a national record for the State. Among these achievements, are the following:

- The nation's packaging industry has helped to establish a facility for training packaging industry mechanics.
- State Workshop Conference for Master Planning in Vocational-Technical Education.
- Technology for Children Project (K through 6) funded by the Ford Foundation.
- Creation of a Center for Occupational Education at Jersey City State College in cooperation with the Western Electric Corp.
- First State in the United States to have parochial high school Distributive Education programs.
- First New Jersey student elected President to the National Future Homemakers Association.
- Establishment of Public Information Unit co-sponsored by a private college and a Department of Education.
- Registered Nurse Refresher Training Program (under MDT).
- A Governor's Symposium on Education and Training for Employment emphasizing coordination and cooperation among public and private agencies.

Acknowledgements

Our sincere thanks are extended to all who cooperated in making this publication possible, and especially —

- those schools who generously provided photographs of their programs
- students in the pilot program for Visual Communications Technology and their principal, Mr. Hollis W. Wyks, at the Marie H. Katzenbach School for the Deaf, for the printing
- the Public Information Committee of the Division: Mr. Ralph Bregman, Chairman; Mrs. Chrystine Shack; Mr. Rodney Jurist; and Mr. Donald Amiott, for preparation and development of the contents as provided by the Division staff; and final editing by Dr. Bernard A. Kaplan.

Finances and Statistics

The importance of vocational education to our country is evidenced by the fact that financial aid in substantially increasing amounts is being provided by national, state and local governments. Federal aid has furnished an impetus through a succession of Acts, probably the best known of which are the following:

ACT	*YEAR ADOPTED*
First Morrill Act	1862
Second Morrill Act	1890
Smith-Hughes Act	1917
George-Deen Act	1936
George-Barden Act	1946
The Vocational Education Act	1963

Through consolidation and amendments, Federal funds are now provided to the States through the Smith-Hughes Act, the George-Barden Act, and the Vocational Education Act of 1963. (Funds under MDTA, totaling nearly $25 million for the last two years. are alsc administered for the State by the Division of Vocational Education.) Funds currently (1966/67) allotted to New Jersey under these Acts are the following amounts:

ACT	
Smith-Hughes	$ 201,903
George-Barden	876,457
Vocational Education Act of 1963 (Includes Vocational Work-Study Funds)	5,658,707
	$6,737,067

These Federal funds must be matched with State and/or local funds at a minimum of a dollar-to-dollar ratio. The following table shows expenditures for vocational education in New Jersey over a period of five years:

	Federal	*State*	*Local*	*Total*
1961-62	$1,094,543	$1,450,970	$2,141,927	$ 4,687,440
1962-63	$1,185,865	$1,407,178	$2,436,013	$ 5,029,056
1963-64	$1,133,264	$1,593,200	$2,792,386	$ 5,518,850
1964-65	$4,229,140	$3,581,982	$4,821,319	$12,632,441
1965-66	$6,190,532	$5,731,221	$7,377,023	$19,298,776

The Finance and Statistics Branch of the Division of Vocational Education shares the responsibility for the proper accounting and State-wide distribution of all the Federal funds and a portion of the State funds. In addition, statistical records related to finances, programs and personnel are maintained.

*COMMUNITY COLLEGES; STUDENT RECORDS; *STUDENT CHARACTERISTICS; *STUDENT ENROLLMENT; SOCIOECONOMIC BACKGROUND
*CONTRA COSTA COLLEGE; CALIFORNIA

The purpose of this study was to give a basis for development of course offerings and curriculum to meet student needs. The study is divided into 3 parts: (1) the trends as indicated by the available data, (2) current data on the day-time students, and (3) the evening or special class students. The number of students has increased over the last 4 years. The question is asked as to what happens to the large freshman class who do not plan to complete college--some students extend their time in college, some transfer to another institution, and some are not high school graduates. Comparing the results of tests, the Contra Costa College students score as well as other junior college freshmen on the American College Test. Illustrations and tables are given for: numbers of students attending Contra Costa College, and various personal information such as place and date of birth, high school data, prior college experience, employment, income, marital status, plans upon graduation, etc. Of the 2,094 students in the day classes, 254 are work study students. The same information was tabulated for the 2,273 extended day students. (MS)

INTRODUCTION

This report has many implications for our course offerings and for development of the curriculum in terms of meeting student needs. The first section of this report is composed of a series of highlights that seem particularly significant to the author. The editorial comments and interpretations are my responsibility alone and undoubtedly reflect, to some extent, personal biases. If the reader will excuse this weakness and at the same time evaluate the data for himself, so he can draw his own conclusions, then the purposes of this report are at least partially fulfilled.

The 1966-67 Characteristics Study is divided into three parts. Part one is comprised of a discussion of the trends indicated by the data from this report and the report of 1964-65. Part two is the current data on our day time students. Part three is devoted to the students attending Contra Costa College during the evenings.

The information used in this study was obtained largely from questionnaires completed at the time of enrollment.

TRENDS

Some of the most noticeable trends that need to be carefully examined are presented here in a descriptive form. The actual figures can be located through use of the Table of Contents.

Enrollment Results

There has been an interesting change in attendance patterns. There are ten percent fewer students attending during the day than there were two years ago. Most of this drop was among the men. There are several probable reasons for this: (1) increased draft calls; (2) consequent lower enrollment in state colleges and universities - who then accept more of our "eligible" students; and (3) low rate of unemployment.

The employment rate has been frequently demonstrated to be directly related to college attendance. This seems particularly true in light of a 25.6% increase in evening enrollments. The enrollments of men in the evening account for most of the increase during the evening. Another indication of the role of employment in enrollment is manifest by 60% of the day time men and 30% of the women working full or part time.

The number of students enrolled in both evening and day courses has sharply increased in the last four years. The change has been from 160 to 485 students - an increase of over 300%! The exact reasons for such an increase are not positively known, but one should not overlook the desire for draft deferment as being a critical factor.

With such a large freshman influx, a large portion of which do not plan to complete, it becomes necessary to ask what becomes of our large freshman class each year? An adequate way to follow these students has not yet been devised. Undoubtedly some transfer, some go to work and enter the evening program, some learn the skills they need for job placement, some are drafted, some are married and some don't feel the college is meeting their needs.

The "Stretched-out" student

Fifteen percent of the students are taking more than the regular four semesters to complete their work. This is a slight drop from two years ago and is probably a by-product of increased necessity to maintain a full load in order to be eligible for draft deferment.

The Transfer Student

Our day students still intend to transfer to San Francisco State College (18%) and to the University of California (12%). A total of 56% of our day students report themselves as intending to transfer to a four year school. 44% do not intend to transfer. The number of students not intending to transfer is high in comparison to several other national studies which usually indicate 65-75% intend to transfer and 25-35% do not plan to continue beyond the junior college.

The reasons for such a reversal of the usual anticipated trends are difficult to isolate. One might hypothesise that the students (hopefully) are more realistic since only about 20% to 30% of a student body usually do transfer.

High School Drop-outs

Our student body is composed of 4.36% (132) non-high school graduates. The grades at which they dropped out of high school are not recorded. The data for evening students show that 12.45% did not complete high school or its equivalent. It is possible that we are serving the "drop-out" who went to work and not teaching those who did not go to work.

The Richmond Unified Schools, who contribute 63% of our students, report that 696 students dropped out of high school last year. If we use these figures as a reference point we may assume that we are picking up a very small percentage of the "drop-outs.

This group of potential students demand a special approach if we are to reach them. The proposed project in which a mobile unit is extended into areas of the community in order to bring the College closer to groups that are underrepresented in the student body is a positive step toward meeting the special needs of these potential students.

Testing Results

A comparison of Contra Costa College student scores on the ACT against other junior college freshman reveals that our students closely match the scoring performance of other junior college students. The only exceptions in this comparison are the large group of students who score on the bottom of the test.

One must ask if the ACT test is adequate for use with our student body. Certainly the lower limits of the test are too high for over one-third of our students. The ceiling on the test seems more than adequate. It appears that the test is built to measure average or exceptional students but ignores the lower scoring students.

A very interesting change in performance of this test is indicated when compared to the College Qualification Test administered two years ago. The C.Q.T. showed that we have a large group scoring low - but that a large group also scored quite high. This pattern no longer appears. Perhaps the best explanation for this is that the CQT, like the ACT, has a fairly high floor, but unlike the ACT it also has a low ceiling so that many students were able to score near the top of the test.

The testing results indicate the possibility of re-evaluating the ACT for its appropriateness to our needs. At the same time it may be possible to look for more diagnostic tests to be used with those who score low on the ACT. The proposed program of use in the General Aptitude Test Battery for those in-

terested in vocational-technical programs might be expanded to those who initially do poorly on the ACT. The resultant scores would help define the areas of strength and be of benefit in planning an educational program closely aligned with individual student needs.

DAY CLASSES

Information given on the next pages is based on data compiled concerning 3024 students in day and extended-day classes. Characteristics are reported for the 485 students currently enrolled in both Day and Extended-Day classes. An attempt has been made to present information about the students' backgrounds, particularly educational, about their present characteristics and academic status at Contra Costa College, and finally about the future plans of the students.

KISHWAUKEE COMMUNITY COLLEGE; ILLINOIS; DE KALB COUNTY; LEE COUNTY; OGLE COUNTY

Eight school districts participated in the study of community college needs for the three-county area of DeKalb, Lee, and Ogle counties. The population of the combined area proposed for the college was 60,030 in 1960. The projection for the population is 80,000 in 1975. The study concludes with a recommendation for the creation of a community college for the combined area. The study predicts an opening enrollment of about 400 full-time students, rising to 1,300 full-time students within the first nine years of existence. The report contains population and enrollment statistics, financial data, educational program suggestions, building and site recommendations, industrial and residential desires for the college, legal procedures, and related information necessary for the consideration of those empowered to establish a college district. Illinois State Junior College Board
Mr. D. E. Stitzel, De Kalb County Superintendent
Mr. Wilbur Pickering, Ogle County Superintendent
Mr. John Torrens, Lee County Superintendent
Boards of Education of Participating Districts
Citizens and High School Students of the Area

Dear Friends:

The Citizens Committee appointed by local school boards has completed its feasibility study to determine the need for a junior college in this region. The report of the committee and the petition which was prepared at the conclusion of the study are being submitted to the State Junior College Board for review and subsequent action.

The report contains pertinent data on anticipated enrollment and course offerings, building recommendations, financial requirements, and occupational needs. Since the preparation of the report, further evidence has been noted which stresses the need for courses for industrial workers; and, with the lack of space in colleges, the need for the junior college becomes more apparent.

Included in the report are data on eight school districts. Nearby are other districts which plan to annex to the Kishwaukee College district if it is formed, and there is some evidence that other territory may be annexed later. None of the territory included in the petition will detach from the college--or, at least, this appears to be so at the moment.

Nowhere in the State is there more interest in a community college than in this region, and the institution formed will undoubtedly feature agricultural and technical programs to a greater degree than some would anticipate. Survey responses were quite definite in pointing out the areas which should be established, and commercial and technical offerings will be in demand as the institution grows.

It is the hope of the Committee that the report will be carefully studied by the residents in the area so that each will be aware of the project and the promises the college holds for the region. The committee further hopes that the State Board and the Board of Higher Education will approve the formation of the college and that the electorate will approve later in the year when the vote is submitted to them.

To all who assisted in the project, the Committee extends its appreciation.

Sincerely,

Robert Kenega

CHAPTER 1

PROPOSED: THE KISHWAUKEE COMMUNITY COLLEGE

After fifteen months of study and consideration, representatives of eight school districts in DeKalb, Lee and Ogle counties agree that it is possible and desirable to create a community college district comprising their combined area. These districts are: DeKalb, Genoa-Kingston, Hiawatha, Malta, Rochelle, Shabbona, Sycamore, and Waterman. A map of the proposed college district appears herein as Figure 1.

The study made by the committee predicts an opening enrollment of about 400 full-time-equivalent students, rising to 1,300 full-time-equivalent students within the first nine years of existence. It is proposed that the campus, with two building phases, be located somewhere within a five-mile circle centered at Malta. There is available, in the proposed district, an assessed valuation of $277,400,000--nearly four times the legal minimum of $75,000,000.

Visionary leadership is needed for the creation and maintenance of a substantial community college program. The viewpoint that quality is limited to academic fields is a deterrent to developing effective occupational programs. A technical education lay advisory committee, composed of people from agriculture, business, management, trade unions, and education, is recommended to broaden the horizon of the professional staff of the college.

A multi-purpose educational program is proposed for the Kishwaukee Community College, including college parallel offerings, vocational and technical programs, adult education, high school opportunities for mature non-high school graduates, a broad general education curriculum, and special opportunities for gifted high school students.

Recommends Immediate Action

The study concludes with a firm recommendation that the legal steps be taken as soon as possible to provide the voters of the proposed district with an opportunity to vote on the proposition in the fall of this year. By such a vote a district will be created, tax resources of 12½¢ per $100 of assessed valuation providing a rate ample for the foreseeable future will be authorized, and an election for the community college board of education will be assured. The complete report contains population and enrollment statistics, financial data,

educational program suggestions, building and site recommendations, industrial and residential desires for the college, legal procedures, and related information necessary for the consideration of those empowered to establish a college district.

Since the first school in this area was established in 1847, the sustained interest in education has been evidenced by growth in school buildings, libraries, and improved educational programs. The variety of industries represented in this area, agriculture and its related businesses, and the well established lines of transportation and communication all tend to increase the emphasis on the educational facilities within this area. In spite of the efforts of the educational institutions and agencies in this immediate geographic area, further effort is needed to meet industry's, agriculture's, and society's needs--not only for today, but also for tomorrow. At present, only limited opportunities are available for those interested in vocational and technological educational programs. There is an increasingly greater demand in this area for personnel with this kind of training.

Projects Steady Growth

Enrollment. The feasibility study presents several methods of projecting the anticipated community college attendance for the next ten years. Based on the school population of the eight school districts participating in this community college study, it is evident there will be a steady growth of enrollment from at least 595 participating students the first year to 2,110 students within eight years. These students would be enrolled for full and part time study in technical, vocational, adult and pre-university courses.

The report of the population committee, given in detail in Chapter 2, makes clear the present need for the proposed Kishwaukee Community College and predicts critical needs in the near future.

Curriculum. A community college functions to serve the people in its area. Therefore, the program or curriculum offered by the Kishwaukee Community College should have suitable variety and flexibility to meet the educational needs of the people in the community. As a result of surveys made of interested students and personnel managers in the industries of the area, the following programs are recommended:

a. Vocational and technical programs
b. Two-year college parallel programs
c. An adult education program
d. A deficiency program for non-high school graduates
e. A broad general education program
f. A program for gifted students

It is anticipated that more than half of the prospective student body will enroll in the college-parallel program. College guidance personnel will help these students to design an academic program to meet additional college requirements as well as to develop the capacities of individuals in terms of individual and societal needs. Diagnostic procedures will aid in determining immediate and long range individual goals in terms of abilities, aptitudes, and interests.

Additional Important Areas

Equally important will be the technical and semi-professional programs to meet manpower needs in business, technical, and health occupations.

Courses. Courses related to Business could include offerings in accounting, agri-business, secretarial, business management, merchandising, and sales. Included in the technical areas would be specialization in demands for skills in industry, electronics and automotive technologies, and industrial drafting. Pre-nursing, home-management, cosmetology and x-ray technician training might comprise the area of health occupations.

It is recommended that a two-year, general education course be made available to those individuals in the community who desire education beyond high school but are not interested in vocational courses or the college parallel courses. Graduates of this two-year program would qualify for the Associate Degree.

Adult or continuing education opportunities should be provided by the community college. Those eager to improve skills and learn new skills to increase job efficiency would have these opportunities through their community college programs. For those who did not graduate from high school, the adult education division should provide a program through which these individuals could make up their educational deficiencies.

The multi-purpose community college is designed to meet the needs of all individuals within the college district who wish to use the college to the maximum advantage. The community college is an educational institution designed to offer something to anyone or everyone who wishes to involve himself in increasing his skills, aptitudes and knowledge.

Activities. In addition to the regular curriculum program, the Community College should institute a program of student activities which will include clubs, drama, journalism, music, sports, and student councils. Support for social and creative activities and groups should be given.

Library. The heart of any educational institution is the library. Adequate materials are required to sustain the variety of educational programs recommended and to maintain the

effective flexibility of such an institution. It is recommended that the community college adhere to the standards established by the American Library Association.

Staff. The teaching personnel of the community college should be vitally interested in the students and the subject matter. The regular staff will be able to qualify for the Illinois Junior College Teachers Certificate. This regular staff will be supplemented by local, informed and skilled individuals who are willing to take part in community college instructional programs.

Site. No effort was made to determine availability and price for any particular site. But, it was discovered that the price of land in the area varies from $600 to $1,500 an acre, depending upon variables that are usually more agricultural than educational. It is possible, therefore, that land rejected for farm use may be attractive both in topography and price to a community college.

The Committee believes that, although the building program might be phased, this does not seem to be desirable procedure for land acquisition. In the normal expansion of the general economy, land can be expected to be more costly in the years ahead; this factor would be greatly multiplied by the knowledge that it needs the land. It is, therefore, recommended that a site of 120-160 acres be purchased at the earliest possible date by the duly constituted authorities.

Campus. Early in the planning of the college, attention will be given to the building program. Included in the buildings that have been advocated are the administration building, a general classroom and library structure, a vocational or technical classroom and shop building, a physical education center, and a student services building.

As the college gets underway and a definite pattern appears, a more precise schedule or long-range plan should be adopted.

School Organization To Grow

Only the broad outlines of college organization are sketched in the present report. The exact formation should be the creation of the governing board and its appointed college president. At the outset, personnel would be limited to four in administrative positions: President, Dean of the College, Dean of Students, and Business Manager. In addition, there will be a faculty of twenty to twenty-five instructors with some serving in counseling roles as well.

At the earliest possible moment, guidance should receive full consideration, and the expanding staff should include two counselors. Within six years, the growth should reach eight

administrators, five counselors, and between 85 and 90 teachers.

The Board of Education will consist of seven members as prescribed by state law. Representation will be balanced between incorporated and unincorporated areas; in addition, care should be taken to balance it among the several population centers. A lay advisory committee has already been mentioned and is discussed in detail in the chapter on curriculum.

Cost. One of the most important aspects of the Kishwaukee Community College feasibility study was to determine the cost of establishing and developing the kind of educational program needed by the district. The Finance committee based its projected figures on the reports of the Kishwaukee Community College Population Committee, the Curriculum Committee, the Buildings and Site Committee, and the results received from thirty-three similar institutions' responses to a questionnaire. This financial survey was primarily interested in tuition costs, tax levies, and capital improvement costs of community colleges.

Agreement on Financial Needs

After ascertaining that the proposed Kishwaukee Community College qualifies for legal requirements as prescribed by Illinois State Law, after noting the steady rate of growth reflected in the assessed valuation of the proposed district as well as anticipating the continued rapid growth of the area, after comparing costs of individuals attending different kinds of schools, after estimating building costs and interest payments for the proposed Kishwaukee Community College, and after examining the proposed operating budget for this college, the Finance Committee agreed that:

1. The assessed valuation of real estate at present and in the foreseeable future is and will be adequate to support a community junior college well within statutory limits.

2. The total annual cost of a community junior college to the local taxpayer will range from approximately 12¢ to 19¢ per $100 of assessed valuation in its early years of operations. This is based on an estimated tax rate of 8¢ to 12¢ for education and 4¢ to 6½¢ for debt service requirements.

3. The maximum tax rates set forth in the election creating the college will be 10¢ for the Educational Fund and 2½¢ for the Building Fund. No amount has been stipulated initially for bonding purposes.

Supported by Report

This chapter has attempted to present in capsule form the gist of the feasibility study and emphasize the recommendations adopted by the Kishwaukee Community College Survey Committee. The succeeding chapters give, in greater detail, the findings and considerations of the entire group.

In fairness to the study group and in warning to those who fail to grasp the magnitude of this undertaking, it should be pointed out, in conclusion, that the findings of this report are, at best, preliminary and tentative. The actions and decisions of those finally charged with the actual creation of the college may be at variance with these early suggestions without in any way indicating deficiencies in the present study. In any event, the feasibility study will provide data and guidelines that should prove valuable to the Board and Staff of the new college.

CHAPTER 2

COMMUNITY HISTORY AND POPULATION

Background Historical Data about the Area

Peter Lamois, a French-Canadian, was the first white person to locate in Sycamore Township. He settled just north of the Kishwaukee River in 1834. In 1836, the Rufus Coltons established their roots west of Sycamore and soon had a store, post-office, and inn in that area. It is interesting to note that Squaw Grove and Somonauk preceded Sycamore as settlements. Sycamore was laid out north of the present site and across the river, and was called Orange until 1839. DeKalb, known originally as Buena Vista, had only 29 residents in 1850, but it grew rapidly and was incorporated as a city in 1877.

The Village of Malta was named Milton; later it was named Etna; and finally it became Malta. Other communities in the area had exciting beginnings, but detailed histories are not included for them.

The first court in this area was established in 1808 in the home of Rufus Colton; the following year the first courthouse was built. In 1815, a new courthouse was built in the square where the present courthouse in Sycamore now stands; the existing building was built in 1903.

The four-horse stage coach between Sycamore and St. Charles was owned by Timothy Wells and Charles Waterman. The stage line was used from 1840 until better transportation came to the area. In 1854, the Northwestern Railroad had been built as far west as Dixon, and Malta became a shipping point on that line. In 1876, with stations at Genoa, Kingston, and Kirkland, the Chicago, Milwaukee, and St. Paul built through the north end of the county. In 1887, the Chicago and Great Western and the Illinois Central Railroads came through the county.

A post-office was established in Malta in 1856, the same year that the county jail was built in Sycamore. The first newspaper in the area, The Republican Sentinel, was started in 1854; it has been published under different names but without interruption since. Thirty-seven newspapers have operated in the area at various times since 1854.

Lincoln Highway was paved in 1920, and in 1924 work started on the present Illinois State Highway 23; this north-south highway started a mile east of Leland, passed through Waterman,

DeKalb, Sycamore, Genoa, and extended on to the County Line. Highway 64 was built as far as Sycamore in 1931; later it was extended westward.

An early industry in the area was the flour mill for the milling of flour for cereals; this was established in Malta. In 1857, the mill burned to the ground, but it was rebuilt soon after. The elevators were established to store grain, and soon the grain business prospered so well that Malta was the best grain market in the county. The Village of Malta was incorporated in 1869, and that same year the City of Sycamore was incorporated.

The first church to be organized in the area was established in 1836. The first bank was established in Sycamore in 1867.

The first county Farm Bureau in the state was established in DeKalb County; and DeKalb Agricultural Association was founded in 1912, the first commercial production of DeKalb hybrid seed corn occurring in 1934. The company built large seed handling plants in several areas and increased the volume as rapidly as possible. The first two plants were built at Esmond and Waterman. At present, there are twenty plants in eight states and Canada.

The first school in the area was built in Somonauk Township in 1837. Between 1850 and 1861, four schools were built in DeKalb. Other schools were established in Shabbona (1876), Malta (1857), Squaw Grove (1842), Sycamore (1859), Genoa (1838), Waterman (1865), and Rochelle (1854).

Libraries in the area were established in Waterman in 1902, in Malta in 1920, in Shabbona in 1939, in DeKalb in 1893, in Sycamore in 1891, in Genoa in 1922, in Kirkland in 1908, and in Rochelle in 1890.

Several industries have established their roots and have developed in this area. Anaconda Wire and Cable moved from Chicago to Sycamore in 1890. Leich Electric, now Automatic Electric, started in Genoa in 1907. Argos Products was formed in 1949, and Falls Products moved into Genoa in 1946. Tuttle Electric Products and LaCroix Optical are industries located in Kirkland. Barber-Greene Company began in this area in 1957. American Steel and Wire started in DeKalb in 1930. The Joseph Brody Company has operated under present management since 1941. The C. W. Smith Company was established in Waterman in 1950. The Malta Screw Machine Products started in 1947. The Wurlitzer Company began in DeKalb in 1856. General Electric began operating in DeKalb in 1946. Ideal Industries and Diamond Wire came to Sycamore in 1924 and 1946, respectively. Nehring Electrical Works began in 1916. Kauffman turkeys have been raised in Waterman since 1933. Swift and Company recently

moved into Rochelle; and The Carron Spinning Company, Illinois Yarn Company, and Rochelle Asparagus Company have made significant contributions in the Rochelle area. Canning operations began with the establishment of California Packing plants in 1926 in Rochelle and DeKalb and the Sycamore Preserve Works in 1882.

Other industries in the area are the Richardson Company, Deco Porcelain, Leggett and Platt, Turner Corporation, Holub Industries, Newquist Foundry, DeKalb Forge, DeKalb Commercial Body, Greenlee Tool, and Univac. Many more basic industries operate within the proposed community college area. It is impossible to list all of them, so a summary of businesses appears, by category in the following paragraphs. Even then, not all businesses and industries have been listed, but these give some indication of the industrial wealth in the several participating communities. Serving the area are 9 newspapers, 13 banks and savings and loan associations, 58 beauty shops, 12 department stores, 19 appliance repair shops, 42 garages, 34 grocery stores, 10 floral shops, 13 laundries, 15 hotels and motels, 22 common carriers, 38 plumbing and heating dealers, 17 printing companies, 61 real estate firms, 77 insurance agents, 81 restaurants, 87 service stations, 8 dairies, 6 machine shops, 18 lumber yards, 4 cabinet makers, and 110 agricultural firms. In addition to these, there are 43 general contractors in the area, and several specialized firms are working in the construction business--electrical contractors, masonite contractors, remodeling contractors, steel-erection contractors, excavation firms, concrete pavers, roofers, painters, paper hangers, and sheet metal firms.

The agri-business companies represent farm equipment dealers, suppliers, feed stores, fertilizer companies, elevators, buyers, and feeding outlets.

Three hospitals are located in the area. In addition to these, seven medical clinics, a medical laboratory, a dental laboratory, and nine nursing homes are serving the several communities. Practicing physicians number 40; there are 12 optometrists, 28 dentists, and 10 veterinarians serving these communities. Thirty-eight attorneys practice in the area.

Many labor unions have offices in this area. The names of these unions have not been listed here.

There are 47 churches in the area, and six of these operate parochial schools. The eight public school districts contained in the survey operate 32 attendance centers or schools.

The Greyhound Bus Company provides bus service along with the Peoria-Rockford Bus Company, for the various communities, and five major railroads serve the area with freight and passenger service: Chicago Burlington and Quincy; Chicago Great

Western; Chicago, Milwaukee and St. Paul, and Pacific; Chicago and Northwestern; and Illinois Central.

A major university, Northern Illinois University, is located within the proposed college district; enrollment at that institution will exceed 15,000 students next year. Junior colleges surround the area; Rock Valley College, Elgin Community College, Sauk Valley College, LaSalle-Oglesby-Peru Community College, and the proposed Kane-Kendall County Community College, border the territory contained in the proposed college. Two small vocational schools--the Vocational Education School in DeKalb, and the Manpower Development Training in Sycamore--provide some vocational training for the area. Opportunity House in Sycamore provides vocational training for the handicapped. The DeKalb School of Beauty Culture is located within the district, and there are two beauty culture schools in Rockford, one in Elgin, and one in Aurora. There are no business or engineering schools within the proposed college district, but the International Business Machines course in Aurora and the Rockford School of Business and Engineering in Rockford are nearby.

Limited activities exist for those interested in vocational and technological training and in terminal educational programs, since there are few vocational schools in the area and since Northern Illinois University is geared along other lines; it should be noted that enrollment at Northern Illinois University is now limited to high school graduates in the upper 50 per cent of their graduating class, and other private and state universities are finding it increasingly necessary to limit enrollment.

For much of the history and factual information in the report, the committee is indebted to the DeKalb County Board of Supervisors for their excellent history, From Oxen to Jets.

Population. A majority of DeKalb county and portions of Lee and Ogle counties are included in the proposed Community College District. From 1,697 residents in 1840, DeKalb County grew to 51,247 in 1960. The population of the combined area proposed for the college was 60,030 in 1960. The growth of the three counties is shown in Tables 2-1, 2-2, and 2-3. It should be noted that the increase of population in DeKalb County from 1930 to 1960 was 58 per cent; in Lee County, the increase for the same period was 20 per cent; and in Ogle County, the increase for the thirty-year period was 35 per cent.

From the examination of population statistics and a study of industrial and residential growth in the areas to be served by the college, the Finance and Population committees (in a joint session) estimated that growth in the area would increase 35 per cent during the next ten years; with over 60,000 residents in the area now and the projection for the future, the

conjecture is that the population in this community college district should exceed 80,000 in 1975. School population in the participating districts is illustrated in Table 2-4.

Industrial Development. From the list of firms and businesses already presented, it is evident that a number of industries will continue to operate in this area, and the region should attract more industry in the future. A distribution of employment in the three counties is shown in Table 2-5 for 1940, 1950, and 1960; these composite figures were taken from the United States Census of Population.

From the survey that was made by the survey committee of agricultural, business, and industrial firms, it is apparent that considerable interest exists for industrial training programs--programs that certainly could be developed by a community college. As the new college gets underway, advisory councils should be formed to help the college pattern its technical and vocational programs. The potential in this area is difficult to determine at this point, but it is anticipated that many courses and many programs will be offered in technical education as the college programs unfold. It is also anticipated that the college will assume most of the adult education programs that are currently being conducted in high schools of the region.

Transportation. It has already been noted that public transportation is available in the area. A study of the map of the area indicates that there are several major highways serving the college district; and there are a number of well-maintained county roads that will also be available to commuters. The map also notes the geographic center of the district; if all districts included in the study participate in forming a community college, the geographic center will be located five miles west of DeKalb and three miles south of Alternate 30. If Shabbona and Waterman and other communities in the south are not included in the eventual formation of the college district, the geographic center will be three miles west and two miles north of DeKalb--approximately on Annie Glidden road at a point two miles north. Also shown on the map, is the population center of the district; this, it can be noted, is a point just north of DeKalb. It would seem that students commuting to a community junior college in this area would have little difficulty if the college is located near the geographic or population centers.

History of the Junior College Project

Organization for the Survey. The idea of having a junior college in this area came as a result of discussions by the Citizens Advisory Council of the DeKalb School District and other meetings within the county which were held early in 1965. The first meeting to explore the proposition was held at DeKalb

*Source: U. S. Census of Population.

Junior High School in February 1965. There were more than fifty persons in attendance at the first meeting, and the basic components of the proposal were discussed. Since there was an indication of interest, it was agreed that the group should continue to meet, and subsequent meetings were held in Shabbona, Malta, and Kirkland before it was decided that a steering committee was to be formed.

On October 20, 1965, the steering committee met at Malta, and it was announced that the Kishwaukee Community College Steering Committee was duly incorporated by the State of Illinois with the following school districts indicating a desire to move ahead with the project: DeKalb, Sycamore, Genoa, Hiawatha, Malta, Rochelle, Shabbona, and Waterman. A map of the participating districts appears herein as Figure 2. The next meeting was held on November 3, 1965, and at that meeting various estimates were presented for operating and building a college. At that meeting, it was also decided to expand membership of the study committee, with additional representatives selected from each of the eight school districts. It was also learned that the State Office of Vocational Education would assist with the survey. On November 30, 1965, at Malta, Mr. Gerald Smith, Executive Director of the State Junior College Board, outlined the history of the junior college plan and informed the group of proper procedures to be followed in the establishment of the junior college in this area.

At a meeting of the entire committee on December 15, 1965, the study procedure was outlined and the project was underway. Plans for the creation of a foundation to assist with the operational cost of the new college were also formulated at that meeting. Since that time, committees have been at work studying the several possibilities for college instruction in the region, and the study conducted by the group has resulted in the publication of this report. The report contains population and enrollment statistics, financial data, educational program suggestions, building and site recommendations, industrial and residential desires for the college, legal procedures, and related information necessary for the consideration of those empowered to establish a college district. If the project becomes a reality instead of a dream, it is, anticipated that a public relations program to acquaint residents of the area with the proposal will be conducted during the summer and fall of 1966, with a vote of the citizenry being taken late in 1966 or early in 1967. If the citizens of the area mandate the organization of a college, the college board will be elected and plans undertaken for the opening of the institution in September, 1967.

Population and Enrollment

Projecting Enrollment. Several ways of projecting enrollments are available to the surveyor. Estimates of residential

and industrial development, retention ratios, or survival ratios of students, management development techniques used by industrial concerns--all are accepted techniques for estimating school enrollments of the future. Projections of two-year colleges are more difficult, since an established history of enrollments has not yet been determined because of the newness of the institution. However, there are formulas in existence which seem to be effective and reliable.

The formula developed in Florida indicates that there will be a ratio of one junior college student for every three high school students enrolled in grades ten, eleven, and twelve. In Washington and Illinois, it has also been noted that the ratio between junior college and high school students is 16.4 per cent; this means that the college enrollment will be approximately 16 per cent of the high school enrollment in grades 9-12 for any given year. With the increase in college attendance and the cut-offs that have resulted in the State of Illinois, this ratio should be increased to 20 or 25 per cent.

A Michigan formula notes relationship between high school graduates and college enrollment. That formula assumes that at least one-fifth to one-third of the high school graduates within a region will commute to a community college. Because of the current situation in Illinois, a 30 to 35 per cent ratio should probably be used if the Michigan formula is adopted.

A California formula indicates that junior colleges should enroll 43 per cent of the graduates from county high schools, figured on the two preceding years. Inasmuch as California and Illinois situations are quite different, this formula has not been used in the projections for the Kishwaukee Community College.

Another formula for projecting college enrollments is that of using the general population of the area to predict the student body. Under this plan, it is concluded that twenty students will enroll in the college for every 1,000 people in the area. This would mean that the college enrollment in the Kishwaukee Community College would exceed 1,000 students in 1968, with an enrollment of or in excess of 1,300 students in 1974.

It must be kept in mind that all projections of enrollment, in the final analysis, are "guestimates." While the projections are indicative and helpful, they should be checked each year to determine if actual enrollments are running ahead of or are falling behind projected figures. In this way, they can be quite helpful. Three methods have been used by the population committee for estimating future enrollments of the Kishwaukee College. These are described below:

Method 1: Using the last method illustrated, that of assuming a ratio between student enrollment and total population, it is estimated that, for the 1967-1968 school year, there would be 1,015 full-time equivalent students enrolled in the college. In 1975-1976, the full-time equivalent would be 1,370 students.

Method 2: Using the ratio between high school and college enrollments, and using 25 per cent rather than the 16.4 or 30 per cent figures discussed earlier, it has been estimated that in 1967-1968 the full-time equivalent enrollment for this college will be 495 students; this is the first year of operation, and in that year only the seniors of the year before will attend college. The following year, the college will be in full swing with two classes rather than one, and under this method it is anticipated that the enrollment in 1968-1969 will be 1,015 students. A few years later, during the 1971-1972 school year, the enrollment will reach 1,120 students if this method of calculation is correct. In 1975-1976, the projection is 1,200 students. The same projection would be reached under this method if the 20 per cent ratio were used for five years and the ratio increased to 25 or 30 per cent thereafter.

Method 3: This is the most complicated of the methods used to project college enrollments. Under this plan, the committee has assumed that 36 to 45 per cent of high school graduates will enter the community college. In 1967-1968, the full-time equivalent enrollment will be 400, with the full-time equivalent enrollment the second year (the year in which the college is in full operation) reaching 685. During the fifth year, 1971-1972, the full-time equivalent enrollment will be 840, and in 1975-1976 the college will enroll 1,315 full-time equivalent students.

Glancing rapidly at the enrollments obtained from the several methods described, it is apparent that full-time equivalent enrollment during the second year of the college will be approximately 700 students; five years later, enrollment will approximate 1,000 students, and in the ninth year of operation the full-time equivalent enrollment is shown to be over 1,300 students.

It should be mentioned too, that in projecting enrollments for the college, elementary and secondary school enrollments for the past ten years have been used. Past and present enrollments for each of the districts were computed and compared with the composite enrollment, by grades, for the area. The combined enrollment story, both past and future, is shown in Table 2-6; it

*Estimate for District 427.
**No Kindergarten for District 427.

should be noted therein that present high school enrollment is 3,842 students; this is projected to increase to nearly 4,800 students in 1975-1976--a 25 per cent increase in ten years. Table 2-7 summarizes the committee's deliberations and presents the complete college enrollment summary. This table should be analyzed in considerable detail as it pulls together and summarizes all of the points and data that have been described in the chapter.

Kishwaukee College Enrollment. Table 2-7 is divided into four general categories, but enrollments basically are shown for full-time and part-time students. Full-time students are those who will be earning at least 12 hours of credit in the college, while part-time are those who will be taking one or two courses in daytime or evening programs at the school. The full-time projections have been divided into (1) college preparatory and (2) agricultural, business, vocational, and technical curricula; enrollments in the two programs are shown in columns 2 and 3 with a total full-time enrollment being indicated in column 8. The committee estimates that 335 full-time students, 36 per cent of the high school graduates of the previous year, will attend the college during its first year of operation. During the first year, it is assumed that vocational and technical offerings will be limited and that no adult education programs will be offered. During the second year, however, adult and vocational programs are expected to increase, and 60 per cent of the enrollees are expected to remain the second year. It has also been assumed that those enrolled in vocational and technical programs will constitute 25 per cent of the student body for the first two years, increasing to 30 per cent the next three years and 35 per cent thereafter. It may be that this ratio eventually will reach 50 per cent; this should be expected. From the table, it can be noted that the first year's enrollment of 335 is expected to increase to 590 during the fifth year and to 760 students in 1975-1976.

The figures just presented constitute only the full-time enrollments. Many students will attend Kishwaukee College on a part-time basis; some will be working on a college program, but most will be interested in adult education credit or vocational, business, technical, agricultural, or industrial retraining programs. If the college assumes the adult education chore for the area, this program will grow to a considerable extent. With the establishment of advisory committees and industrial retraining programs, vocational and technical programs should expand very rapidly during the ten-year period that lies ahead; it will expand even faster thereafter. Reference to Table 2-7 shows a slight annual increase for the college preparatory students who will be attending on a part-time basis, and other figures are increasing according to the following plan. During the first two years it is anticipated that the college students will take two courses each, while students enrolled in the adult, vocational, technical programs will enroll for one course. In 1970-1971, the vocational and technical programs

TABLE 2-7

KISHWAUKEE COLLEGE ENROLLMENT PROJECTIONS

Year	Full-Time		Part-Time				Total			Full-time Equivalent Enrollment
	College Prep	Other*	College Prep	Other*	Adult Credit	Adult Non-Credit	Full-time	Part-time	Grand Total	
1967-68	270	65	60	110	90		335	260	595	400
1968-69	405	135	125	200	175	100	540	600	1140	685
1969-70	385	165	125	200	175	100	550	600	1150	695
1970-71	400	170	150	300	200	150	570	800	1370	820
1971-72	410	180	150	300	200	150	590	800	1390	840
1972-73	415	225	175	375	225	300	640	1075	1715	975

*Agricultural, Business, Vocational, Technical, and Industrial Retraining.

should increase in intensity with students in those programs taking two courses; at that time, adults in the credit or non-credit programs will be taking one course and the college students two courses. In 1972, it is anticipated that college preparatory and vocational--technical students will be attending on a one-half time basis; this ratio will increase slightly in 1973, and it will also increase in 1974. If these assumptions are correct, part-time students will constitute 18 per cent of the college enrollment during its first three years of operation, 22 per cent of the enrollment the next two years, and 25 per cent of the total enrollment in 1972 and 1973. Beginning in 1974, it is anticipated that 27 per cent of the college enrollment will be from students attending on a part-time basis. Excluding students in adult education courses, the percentage of part-time students increases considerably. In 1970, 32 per cent of the students enrolled in these programs will be part-time students, and in 1975 the ratio will be 53 per cent.

This indicates that the college will open with 595 students, that enrollment the fifth year will be 1,390 students, and in 1975-1976, the college will have nearly 2,200 students in attendance. Since some of these are part-time students, the figures shown in column 11 must be noted. The full-time equivalent enrollment of the college at the outset is noted to be 400 students; the second year, it will be nearly 700. In 1971-1972 the enrollment is estimated to be 840 students, and in 1976-1976 the projected full-time-equivalent enrollment will reach 1,315 students. Again, it should be noted that enrollment projections shown in Table 2-7, the result of intensive study by the Population committee, are very close to those obtained in the other methods previously discussed. This might be expected since the various methods have been used in projecting full-time and part-time enrollment within the various categories.

Summary. Eight school districts participated in the study of junior college needs in the three-county area. These districts are DeKalb, Sycamore, Genoa, Hiawatha, Malta, Rochelle, Shabbona, and Waterman. As the study neared completion, Paw Paw became interested in the project, and while statistics for this district are not included in the study that community and neighboring territory may be included in the petition if a junior college district is formed. Later, other areas may annex to this district.

From the tabulations and statistics presented, it is evident that there will be considerable industrial growth in this region in the future. Even with the present industry, there is a sufficient need for training and retraining programs for business--programs that would be offered in a community college.

Enrollment projections show a need for establishment of a two-year college--one that will offer pre-university, technical,

vocational, terminal, and adult education offerings to students in the area. The need is further demonstrated in chapters dealing with citizen and industrial surveys and the curriculum.

While the area is surrounded by other community colleges (and some with greater enrollment potential), there is sufficient enrollment indicated to justify the establishment of the community college in this region. The estimates of the Population committee show that enrollment in the college will begin with 595 students (400 full-time equivalent students), and that enrollment will exceed 2,200 students (1,315 full-time equivalent students) within nine years.

CHAPTER 3

THE COLLEGE PROGRAM

The program of Kishwaukee Community College should have suitable variety and flexibility to meet the educational needs of the people in the community. The curricular program should be devised so as to meet local needs and interests as well as the interests and needs of local citizens which transcend the immediate geographical area. The curricula should be suitably adaptable so as to serve future populations and meet new industrial and service requirements.

Local citizens may learn skills, attain better understandings, acquire new knowledge, and build appreciations in a community college. Technicians with improved skills should be more valuable workmen. Increased knowledge, understanding, and appreciation should result in better informed citizens and more productive and well-adjusted human beings. The community college can do much to upgrade an area vocationally, technologically, and educationally. The industrial, agricultural, technical, medical, health, service, and educational activities of an entire area will be benefited by a community college. This should be the aim of Kishwaukee Community College.

A cooperative attitude toward other educational institutions--both secondary and higher education--should typify the community college. The program should work to augment, articulate with, and extend offerings of existing educational institutions. All programs should point toward the development of individuals, and each student should be helped toward his maximal potential achievement. A program designed to carry out these purposes is proposed by the Curriculum Committee of the Kishwaukee College Citizens Committee.

General Curriculum Recommendations

Programs should be initiated by the proposed community college in the following curricular areas:

a. A two-year college-parallel program
b. Vocational and technical programs
c. An adult education program
d. A deficiency program for non-high school graduates
e. A broad general education curriculum
f. A program for gifted high school students

While each curricular area will differ in content from others, there is expected to be much overlap in courses taken in various sequences. Some courses may be taken in the college-parallel program but may, for example, also be recommended or required for students in another area.

A "common core" of courses should be required for those two-year programs leading to an associate degree, whether the degree is in the arts, business, or the technical fields. The curriculum committee suggests the following minimum requirements in course content and credit hours for all the programs which lead to the associate degree:

Areas of Study	Credit Hours
Communications	6
American Institutions	6
Mathematics and Science . . .	6
Behavioral Science	3
Orientation to College	1
Health and Physical Education	4
Major Field of Study	20-30
Electives to Total	64

It is important that courses offered and the requirements for the courses in English, mathematics, science, and behavioral science vary according to the student's needs in his major area of study. The communications area should include English composition and speech. American History, American government (state and local) and/or American government (national) should be included in the American institutions area. In the vocational and technical programs, students should be able to take courses which would have the most practical value for meeting their needs.

The value of a guidance program for the junior college student is of such significance that it should be discussed in a separate section. A guidance-oriented teaching and administrative staff is of inestimable value at this educational level.

The College-parallel Program

It can be expected that more than half of the student body of the proposed community college will enroll in the college-parallel program. Students in this curricular area will anticipate transferring to a four-year institution at the completion of their work in this college. Preliminary surveys indicate that college-bound students from this geographic area go to all of the state universities in Illinois, numerous other Illinois colleges and universities as well as to dozens of out-of-state schools.

Since requirements at the various colleges and universities

are not uniform, it shall be necessary, through careful guidance, to insure that the transfer students will have the necessary courses which will enable them to meet the freshman and sophomore requirements at the institutions into which they transfer. Guidance personnel at the Kishwaukee Community College should acquaint themselves with freshman and sophomore requirements of the accepting colleges and universities so as to help the student in designing an academic program to fulfill these requirements. In addition to the "common core" of courses which constitute basic requirements for the associate of arts degree, there should be elective courses of suitable variety to satisfy the educational requirements of the accepting colleges.

Students transferring from community colleges to 4-year institutions will be numerous, and the sample programs based on individual 4-year institutions requirements are given. The 4-year institutions listed are those determined by the survey results as being the institutions that students indicated they would most likely attend.

It is suggested that a minimal college-parallel elective program should include:

American Government, National
American Government, State and Local
Art Survey
Biology
Botany
Business Law
Calculus
Child Psychology
College Algebra
Computor Programming
Creative Writing
English Composition (6 hrs.)
Foreign Lang. (Min. of 12-16 hrs. in 2 to 3 languages)
General Chemistry
Geography of Illinois
Geology
History of the Americas
Human Anatomy
Hygiene
Intermediate Algebra
Introduction to Philosophy
Introduction to Business
Introductory Psychology
Introductory Sociology
Journalism
Marriage and Family
Math Analysis
Music Survey
Pan-Pacific History
Physiology
Principles of Accounting
Principles of Conservation
Principles of Economics
Quantitative Analysis
Survey of Am. Literature
Survey of European Hist.
Survey of Phys. Geography
Survey of Phys. Science
Survey of World Lit.
Trigonometry
World Civilization
World Reg. Geography
Zoology

The proposed minimal elective program should be expanded or enriched if the needs of the community warrant it. It is suggested that, in this expansion and enrichment, the staff should not confine its interests solely to traditional courses; rather, they should examine recent approaches to subject matter and to new areas of study.

TABLE 3-1

TRANSFER POSSIBILITIES AT SELECTED COLLEGES

Subjects	Transfer Programs	Credit Hours
	Northern Illinois University

Occupational Programs

Technical or vocational programs serve two purposes in the community: 1) The student is helped to pursue his personal goals and interests and to develop his capabilities, and 2) the manpower needs of local industry, business, and services are met by providing skilled workmen and other trained personnel.

Surveys conducted among citizens, employees, employers, and students indicate that Kishwaukee Community College should offer a broad program in technical and vocational areas. In this age of occupational change it is important to offer to students those training skills which will prepare them for economic independence as well as social maturity. This comprehensive college would do well to offer technical and semi-professional programs to meet the community's manpower needs in the following areas:

Business: Accounting, Secretarial, Secretarial (Medical and Dental), Business Management, Merchandising and Sales, Agri-business.

Technical: Industrial Technology, Electronics Technology, Automotive Technology, Industrial Drafting.

Health Occupations: Pre-nursing, Home Management, Cosmetology, Dental Assistant, and X-Ray Technician Training.

A distinction should be made between technical programs which educate specialists in a narrow sphere of training and programs which call for a broader training experience. Specific courses to meet the needs of persons employed in industry should be offered if a sufficient number of qualified students are available to make it feasible.

Business Programs

Both beginning and advanced courses in business areas should be offered, and the individual program should be tailored to fit the needs of the student. Previous high school courses taken and business experience may determine the level at which the student should begin. Counselors should give placement tests and otherwise assess the preparation level of the student. Two-year degree programs should be offered as well as courses of lesser duration for those who do not wish to pursue the degree program.

Types of business or commercial courses suggested for immediate consideration are:

Secretarial (General)

Agri-Business. Agriculture is an ever-changing industry. Because of tremendous advances in research, technology, machinery and equipment, farms now are larger, and less people are required in direct production. These changes however, have opened new fields in related agriculture and service areas. The demands for well-educated agricultural specialists in business, education, and government far exceed the supply. Schools must move rapidly to meet the expanded needs for trained experts with agricultural backgrounds. For those individuals who have a basic interest in agriculture but who are confronted with a declining job market in the field of agricultural production, it is suggested that a two-year program in agri-business be offered at the proposed college.

The foregoing programs in the business education area are sample programs. In much demand from employers in non-agricultural business and industry were these job classifications: accounting and bookkeeping, secretarial science, business machines, clerical practice, office management, data processing, advertising, small business management, and merchandising. This entire group of courses are seemingly in great demand since there appears to be a scarce supply of employees in these areas. The business-education curricula should be fully implemented and suitable stress given to these courses.

Technical Education

Job opportunities for graduates of industrial, professional, and technological programs far exceeds the supply. The preparation of middle-level specialized technical manpower realistically serves a wide range of students. Visionary leadership is needed for a substantial technical program. The viewpoint that quality is limited to academic fields is a deterrent to the development of effective occupational programs. A community college should accept the responsibility for introducing technical programs. The illustrated technical courses of study are of two-year duration; however, it should be emphasized that one-year (non-degree) programs in similar fields should be among the curricular offerings of the proposed community college.

The curriculum committee strongly recommends that prior to the initiation of any broad technical-education curriculum, the administration of the proposed community college organize a technical-education advisory committee. The committee is to work with the administration in developing programs, and it should be composed of people from business, management, trade unions, and education. It also recommends the study of Technical Education in the Junior College-New Programs for New Jobs

by Norman C. Harris and the Los Angeles Trade-Technical College Catalog as source materials for this committee.

Health Occupations

Earlier in this chapter, it was suggested that the proposed community college institute a program for the preparation of dental and medical secretaries. As the government's medicare program will surely spark a demand for health-related workers--a field which already is experiencing a need for a great many more people than existing schools can supply--and in response to the indications of the survey, the committee recommends a one-year pre-nursing course along with these additional areas of health technology.

Nursing Curriculum. For the one-year pre-nursing curriculum the regular "core courses" in the college parallel studies could be pursued but with the inclusion of biology, chemistry, and any other required courses. The program of studies should

be carefully planned so as to articulate with the nursing school of the student's choice.

It is further recommended that the need for the training of practical nursing be scrutinized to see if a program for these students seems warranted. The advice of local medical authorities should be sought.

Other Occupational Areas

Home-management and cosmetology courses are recommended. The former would serve those who wish to prepare themselves in home economics or to fill the role of housewives. The latter courses can be expected to be in continuous demand.

	64

General Education

A two-year general-education course should be made available to those persons in the community who desire education beyond the high school but who are not interested in special vocational courses or the college parallel course. For whatever reason--personal, social, cultural--these persons are interested in a two-year terminal program. The Curriculum

Committee recommends that such a program be initiated and that it be based upon the "common core" of courses previously listed in this chapter. In addition to the minimum required courses for all those persons working toward the associate degree, it is recommended that not fewer than twenty additional hours in the liberal arts and sciences and sufficient elective hours be required.

Adult Education

The curriculum committee recommends that Kishwaukee Community College should institute a broad adult-education program. Various high schools and other agencies presently conduct limited educational programs. The administration of the college should consult with the administration of the schools and other agencies to insure cooperation in conducting adult education programs. It is recommended that the college hire a director for this program.

This institution should be geared to filling the varied educational needs of the community, and there is great demand for adult or continuing education. Under-education is a prime cause of unemployment and under-employment in a rapidly advancing and shifting technical world. In addition to providing further education for the adult interested primarily in personal enrichment, the college should offer courses for persons eager to improve their skills in order to advance on the job.

For those individuals who were prevented from graduating from high school, the adult education division should be prepared to overcome their academic deficiencies. Opportunities to meet the educational needs of the adults of the community should be continually reviewed by the administration and interested community advisors.

Besides course offerings to adults, other educational activities are a part of the adult education program. Activities such as musical programs, lectures, plays, workshops, and extension services would be included as a cultural lift for students and community.

Guidance Services

It is recommended that the institution promote a guidance program which is adequate to meet the needs of the students served by the college. The Community College has special guidance needs because:

1. There are numerous kinds of courses and programs from which students may make choices.

2. Special counseling tasks arise from the need of students to transfer course work to various colleges and universities.

3. This type of institution is in the business of developing the capacities of individuals and special attention is paid to individual needs.

4. Admission policies are such that placement tests are required and other testing may be desirable.

5. The majority of students entering junior college plan on transferring; yet less than half of them actually do transfer. Some of the students find that they neither have the ability nor the interest nor the motivation required to follow a rigorous course of study. It is here that the guidance department of a junior college can perform a special service--by directing these students into occupational programs for which they are better suited. The guidance service must effectively provide for maximum talent development of each student.

In addition, all colleges need to maintain adequate personnel records and to obtain necessary facts about their students. Furthermore, student activities require coordination and supervision from staff personnel.

Related Activities

In addition to the regular curricular program, the community college should institute a program of student activities which would include sports, clubs, organizations, music, drama, journalism, and student government.

Intramural athletics should be stressed and some competitive sports such as basketball, gymnastics, wrestling, baseball, and track (but excluding football--at least initially) should be available. Strong support for social and creative activities and groups should be given, and new opportunities for additional activities should be extended as the college grows in size.

The curriculum committee urges caution in establishing these related activities, particularly at first when the size of staff, the size of the student body, and extent of facilities may be limited. It is not intended that unusual emphasis be given to the competitive athletic program.

Library

In establishing the Kishwaukee Community College, the planners should give serious attention to the heart of the academic community--the library. The various technical, business, cultural, and academic curricula of a community

college will require adequate materials from the day the college opens its doors, and the collection will need to be kept up-to-date and expanded continuously.

It is recommended that the standards for community college libraries set up by the American Library Association be used in designing this facility. An illustration of a suitable library is that shown in Figure 3--The Eshleman Library in Henry Ford Community College.

Instructional Staff

The staff of the proposed community college should be vitally interested in the students themselves and in their subject matter area. Work in research and writing is not as important in the community college as in 4-year institutions. Teachers will be sought from high schools and colleges who are top educators in their fields, and they must be able to qualify for the Illinois Junior College Teachers Certificate.

The full-time staff of the community college may be supplemented by local businessmen, technicians and professional staffs. The community is an excellent source of informed individuals who are willing to take part in community college instructional programs; the school should take advantage of this instructional source. Such individuals should be adequately prepared for their teaching assignments through in-service instruction both on the function of the community college and in teaching methods.

The curriculum committee feels that assurance should be given the faculty of the vocational and technical programs so that they do not lack status. Prestige is important in technical and occupational education, and it is of importance that this staff have the same voice in policy making as does the staff of the college parallel programs.

Advisory Committees

It is recommended that for the business and technical programs that the governing board and administration of the community college should set up advisory committees. These committees should be composed of lay persons who are well-informed practitioners in the business or technical areas involved and the teaching and administrative personnel of the college who are most directly concerned. These lay committees could serve in advisory capacities in matters concerning the curriculum in their special areas. Obvious advantages accrue from such a cooperative concern and approach. Employers, technicians, businessmen, and teachers may work to achieve harmonious and rewarding educational and vocational experiences for the students to insure their employability in jobs having rapidly-changing requirements.

Meeting Special Needs

A community college functions to serve the people of its area. Those individuals who have special education needs should have those needs satisfied. The curriculum committee recommends that the Kishwaukee Community College should be alert in fulfilling this function. Initially, the college should look to the needs of two such groups: 1) Those persons who have dropped out of school before graduation from grade twelve, and 2) those gifted youngsters, either in or out of school, who would profit from a more advanced, enriched, or rigorous program of studies than that available in their high schools.

In these endeavors, as in any others, it should be the desire of the college administration to cooperate fully with other educational institutions in the areas served.

Summary

The needs of individuals in the community should be met through the educational program of the Kishwaukee Community College. Knowledge, skills, and appreciations should grow, and the industrial, agricultural, technical, medical, health, service, and educational activities of this area should benefit. In a general spirit of cooperation, the college should offer a broad range of opportunities to youth and adults to grow, and in the same spirit, extend to businesses, industries, and other interested groups the chance to train and up-grade their personnel and to create human resources capable of greater productivity.

Average youth greatly outnumber superior youth. A free society operates best with a large, well-educated, economically self-sufficient middle class. This community college should offer its students education best suited to their individual needs. It could play a major role in occupational education--a role in which community colleges could be stronger. Education in an employable skill is especially meaningful to students of today who will be the citizens of tomorrow.

The curriculum committee hopes only to indicate the direction in which the community college will grow. In this proposal is envisioned the establishment of advisory committees to assist the board and the administration in furthering future plans.

CHAPTER 4

ORGANIZATION

At this stage of development, it is possible only to sketch the administrative organization of the college in broad outline. Its exact formation should be left to the governing board and the new president. The analysis presented here consists of the minimum staff which would probably be needed at the outset and an indication of the possible areas of expansion that might result as the enrollment increases.

1967-1968

Figure 4 shows the administrative organization needed at the beginning for a predicted enrollment of approximately 400 full-time-equivalent students. The staff would consist of twenty to twenty-five instructors and would consist of four administrators whose duties would be as follows:

> President. The President is the chief executive officer of the governing board. On him rests all the responsibility for every aspect of the college's operation.
>
> Dean of Instruction. The Dean of Instruction or Dean of the College is responsible for the entire academic program. This would include the planning of the curriculum as well as carrying out the actual instructional program.
>
> Dean of Students. The Dean of Students is responsible for all activities of students that are of a non-academic nature. He will be concerned especially with admission procedures, counseling, registration, etc.
>
> Business Manager. The Business Manager is responsible for directing all aspects of the physical operation of the college, taking care of the business office, physical plant, and maintenance. He will keep all accounts and, in cooperation with the President, prepare the annual budget.

1970-1971

With increased enrollment and expanded operations, a larger staff of perhaps fifty-five to sixty teachers will be

Figure 4

ADMINISTRATIVE ORGANIZATION (1967-68)

Figure 5

ADMINISTRATIVE ORGANIZATION (1970-71)

needed, and the administrative organization might then be expanded as shown in Figure 5 to include seven administrators and two counselors. The Dean of Instruction would have two division heads--one for the Liberal Arts Division and another for the Vocational, Technical, and Adult Education Division. This addition is advisable because of the increased numbers of students and faculty and also because of the diversified nature of the students and of the curriculum. Those who are planning the curriculum and directing the instruction for those taking pre-college programs will be concerned with quite different problems than will those who are concerned with the vocational-technical programs.

By this time, too, the faculty would probably be organized with department heads.

The Registrar would then assume the responsibility of admission procedures, registration, class scheduling, academic records from the Dean of Students.

At least two counselors, one for men and one for women, would be added to the Dean of Students' staff to administer guidance tests, help students determine what courses of study to follow, and counsel with students who are having difficulty.

1972-1973

By this time, with a possible faculty of eighty-five to ninety teachers, the Adult Education Division might be separated from the Vocational-Technical Division, thus requiring another administrative position at this level. Also, additional counselors would be needed and other personnel to assist the Dean of Students with such areas as library, health services and athletics. The Business Manager, too, would need additional staff members. Figure 6 shows a possible organizational structure at this point--with eight administrators, five counselors, and eighty-five to ninety teachers.

Figure 6

ADMINISTRATIVE ORGANIZATION (1972-73)

CHAPTER 5

BUILDINGS AND SITES

There are at least two ways in which a community college can come into physical being: 1) to spring forth full blown from the will of the voter based on immediate availability of existing facilities, or 2) like Topsy, to just grow--usually from a junior college embedded in a secondary school setting. Examples of either of these ways can easily be found in the State of Illinois, and experience with each suggests difficulties that can be avoided by seeking other ways to create a community college.

Attractive though the Topsy Plan is--just let it grow--a little knowledge of the facts indicates that someone sometime planted a seed some place; hence, Topsy. Such anonymity is denied the founders of Kishwaukee Community College. The Survey Committee is well known and charged with the responsibility of planting the community college seed. If the community college is thought of in terms of a seed that will have to grow through a developmental pattern, it is clear that expecting Jack and the Beanstalk results is also denied to the Survey Committee.

Thus, unlike Jack's careless Mother who angrily threw the seed on the ground, or Topsy's unknown Father, the Building and Grounds Committee feels keenly the responsibility for planting the community college seed in the best possible seed bed.

Factors to be Considered

At this point, the Committee turned to experience of others for help and considered a check-list of important points regarding school sites devised by the New England School Development Council. Suggestions from that brochure appear in Table 5-1.

The Committee studied 10 Designs/Community Colleges, a publication of the Educational Facilities Laboratory. The Committee also noted the suggestions developed in a conference in California in 1964; these appear in the following paragraphs.

Site Selection Guidelines

"The selection of the site for a community junior college

TABLE 5-1

HOW TO CHOOSE A SCHOOL SITE

Factors	Considerations
Size	Must be determined in terms of needs of activities of desirable future program. Should make careful layout of all site facilities to scale in study of each available site area. Leeway for expansion should be allowed. Compromise on size must be resisted.
Shape	Preferably rectangular, or nearly so. Not over four times as long as wide. If more than ample in size, actual shape may vary but there should be no constrictions in boundaries or awkward angles hindering suitable layout of site facilities.
Location, Accessibility	Near center of attendance district. Centrality may be sacrificed in favor of other factors of suitability. Attendance district layout and school location should be such as will give maximum avoidance of hazards.
Environment	Residential or park area. Remote from taverns, cheap hangouts, and other less reputable centers. Remote from smoke, noise, or odors.
Topographical Characteristics	High, dry, and level land. Avoid low, swampy land, poor soil conditions, filled land, ledges too near surface, land without suitable sod-growing conditions.
Selection and Acquisition	Avoid compromise with inadequate sites. Plan a long time ahead. Develop public understanding of needs. Foster cooperative planning projects. Have opinion of experts from outside local community, especially in case of internal conflicts of opinion. School committee should be entrusted with final choice. Act in accord with advice of competent legal counsel. Pay lowest possible fair price for adequate site.
Development	Have advice of architects, or landscape architects, or both. Locate buildings to allow for their expansion without interference with areas to be developed for other purposes. Buildings should not be too close to street. Orient buildings properly for

TABLE 5-1 (Cont'd)

HOW TO CHOOSE A SCHOOL SITE

Factors	Considerations
	best natural light and accessibility by walks and driveways.
Financial Aspects	Compare costs of available adequate sites bearing in mind: 1) initial cost, 2) cost of development, and 3) capitalized cost of recurring expenditure items, such as transportation. Do not sacrifice adequacy for economy.
Zoning	Adjacent area should be zoned for residential or park.

is among the most important decisions to be made. The site chosen will characterize and flavor the institution and its student body for as long as it is used as a college campus. The architectural motif of the buildings will be influenced by the site; the layout of the campus--the master plan--will be determined by the topography of the site and its relation to streets and entrances and exits; even student policy will be influenced by opportunities for recreation on the campus and the kind of landscaping suitable to it. Thus, the wise selection of the place to establish a campus of a community college cannot be overemphasized.

"Size: The size of the site should be based on plans for the ultimate enrollment of the college. Although site selection may very well occur before enrollment projections can be made, general estimates can be made simply from a knowledge of the population and possible growth of the area to be served by the college. If the college is in a rural area of small towns and villages, we may assume a college enrollment of 400 to 1,000 students. The comprehensiveness of the program and the curriculum will affect the choice of campus. Obviously, the more activities, programs, and curricula, the more space the college will need. It is suggested that a minimum of 80 acres be secured for a small college campus. More acreage is desirable if available. If you wonder what the land will be used for, it should be remembered that for a campus of 1,000 students, at least ten acres will be needed for parking alone; on a campus of 5,000 students 30 acres will be needed for parking areas and traffic lines--even these figures may be conservative.

"Frankly, few community college administrators can ideally plan their campus. In a metropolitan area, a large acreage is almost impossible to obtain. Many city colleges

develop well-planned physical facilities and most effective programs on small acreage. Even community colleges in suburban or rural areas frequently cannot obtain the amount of land they would like to have. Careful planning, multiple-story buildings, careful layouts of athletic and recreation areas, and 'inner' campus planning all aid in overcoming restrictions on space.

"Topography: The topography of the land is important in site selection. The land obtained must be a place to put buildings, lay streets and sidewalks, and plan for attractive landscaping. A study of possible land utilization should be undertaken. There are beautiful campuses of ravines, streams, hills, and forests where actual land utilization is at a very low percentage. If this can be afforded the results are pleasing but most schools have to work toward 100% utilization.

"The relation of the site to the community, to streets and highways, to power lines and sewage lines is an important consideration. A site reached by streets through a semi-abandoned part of town, or through crowded industrial streets, or far from good access highways, or surrounded by unzoned, third-rate commercial property, is simply out of the question for a community college campus.

"Who are the 'ideal' neighbors for a college campus? Most ideal would be a state or city park, landscaped and protected. Next in desirability would be residential areas supporting $20,000 to $50,000 homes; then in order, residential areas of less expensive homes, garden apartments, high-rise apartments. Satisfactory, but much less ideal are large shopping centers, professional building areas, mixed commercial and office areas. Least satisfactory, and to be avoided if at all possible, are airports, railroad yards, filling stations, garages, factories, and drive-in restaurants and stands. Churches are very high on the list of desirable 'neighbors' for college campuses, but unfortunately, churches rank educational institutions very low as 'good neighbors.'

"Drainage: The matter of land drainage is an important factor. Sites should be carefully studied in terms of drainage after construction, for many tracts of land apparently in their natural state properly drain, but when developed, do not. Extensive study of the whole problem before construction starts may save many a headache later."*

A full afternoon was devoted by most members of the committee to roadside inspection of suggested sites. The

---

*Adapted from Establishing Junior Colleges, Junior College Leadership Program, University of California. January, 1964.

rating scale shown in Figure 7 was devised and used for evaluating the sites.

Each member of the Committee was also furnished by the Malta First National Bank with a copy of A Three Year Atlas and Plat Book of DeKalb County. This proved most helpful in determining exact location of suggested sites.

Following are the general conclusions and recommendations of the Committee on ten sites checked by the Committee. A more detailed statement appears later in the chapter.

Authorities in the field agree that a community college site should contain at least 80 acres, and most have suggested that a site twice this large should be selected. It is difficult to secure additional land after the college is established, so sufficient land should be purchased at the outset to provide for later expansion.

An examination of population figures for the proposed district revealed that the growth and concentration are centered quite largely on opposite sides of the area, in Sycamore and DeKalb on the east and Rochelle on the west. The geographical center of the district was noted as being in the vicinity of Malta, which is accessible by good, all-weather roads.

The study of site requirements and available land indicated that the selection of a site for a community college in the area will present no problem. Sites of 100 to 200 acres were found, and these appear to be available for college use. Cost of land in these locations varies from $600 to $1500 per acre. Unless the college is to be located immediately adjacent to a population cluster, there will be problems of water supply and sanitation at all sites.

Site Selection

In evaluating sites, nine criteria were considered. They were: 1) size, 2) shape, 3) access roads, 4) location in district, 5) environment, 6) topographical characteristics, 7) available utilities, 8) cost (estimated), and 9) zoning.

Size ranged from 80 to 200 acres on the rating scale, but the ideal was felt to be about 160 acres rather than the extreme of 200. Only one of the five sites that were rated as being most suitable exceeded the 160 figure.

Authorities suggest the most ideal shape of the site as rectangular with a 4 to 1 ratio for the sides. Only one of the top five sites met the specification exactly, and the remaining four were more nearly square than rectangular. None of the sites was irregular in shape.

Figure 7

SITE COMPOSITE

State Highway Alternate 30 is the best access road. Three of the five sites were on this route, and the other two were on county blacktops. Several of the sites were bordered by the state highway and county blacktop roads.

Precise location of the geographic and population centers of the proposed district is not possible until precise district boundaries are established.

Choice of environment ranged from the ideal of park and residential to the undesirable neighborhood of heavy industry. Neither of these extremes was found in the area considered--all of it can be classified as agricultural, much closer to the ideal than the undesirable.

Topography is fairly uniform throughout the area, although some sites were a little more rolling than others--but not enough to make a significant difference.

Three of the five sites recommended have three utilities immediately available, gas, water, and electricity. A fourth site lacks water, and the fifth lacks gas and water. All five sites lack sewage disposal facilities. Utilities companies indicated a willingness to extend services to the college at no extra cost.

Cost figures were not available, and the estimates are at best educated guesses. However, it was felt that four of the five top sites would cost more than the average land value for the area with only one at a lower figure.

Agriculture is the zoning category for all sites at the present time, but some might be rezoned residential, commercial, or even light industry.

Summary

It is the consensus of the Building and Sites Committee that the major factors to be considered strongly indicate the location of the Kishwaukee Community College someplace in the vicinity of Malta. A check of the area reveals a number of feasible sites, and a choice could be made on any one of them by the community college board on the basis of: 1) availability and 2) price.

No effort was made to determine availability and price for any particular site. It was felt that this would lead only to the spread of rumors and possible difficulties for the group actually charged with site selection and acquisition. Land in the area is presently selling from $600 to $1500 an acre, depending on variables that are usually more agricultural than educational. It is possible, therefore, that land

rejected for farm use may be attractive both in topography and price to a community college.

Although the building program should be in phases, this does not seem a desirable procedure for land acquisition. In the normal expansion of the general economy, land can be expected to be more costly in the years ahead; this factor would be greatly multiplied by the knowledge that the college wants the land and even more so by the knowledge that it needs the land. It is, therefore, recommended that site of 120-160 acres be purchased at the earliest possible date by the duly constituted authorities.

Little consideration was given to the possibility of a community college in conjunction with an existing high school. The committee recommended continued disregard of such a plan. A college campus atmosphere should be developed.

Development is the key word in consideration of the building program. From study of the preliminary reports of the Population, Curriculum, and Finance committees it would appear that primary attention be devoted to these:

1. Administration building

2. College parallel classroom building (including library)

3. Agri-business Vocational Classroom and Shop Building

4. Auxiliary and Student Services:
   a. Physical Education facility
   b. Cafeteria
   c. Student Activity Center

As a more definite pattern of population and curriculum emerges, it would be possible to develop a more precise schedule. At this time it seems possible only to suggest that, as the community college comes into being, a Master Plan must be created by the board, faculty, administration, and architect in line with long-range goals and dreams.

Too much quick action with too little foresight could hamper the future growth of the college by providing rigid building limitations, inadequate service facilities (sewage, utilities, and parking), inadequate access roads, and poorly located buildings.

Probably the biggest advantage enjoyed by the Kishwaukee Community College at the moment is the freedom to move in almost any direction; but if built with low overhead, there may be future limits on growth.

CHAPTER 6

FINANCIAL RESOURCES

Quite frequently, established educational institutions are limited in the amount of funds available to support a good educational program. All too often, the maximum total dollar amount is determined first and then the curriculum and related educational programs are adjusted so that their costs fall within the funds available. In the current study, the Finance Committee has worked with the Population and Enrollment Committee, the Curriculum Committee, and the Building and Site Committee; and based on their projected needs, the Finance Committee has established the cost of the programs which should be offered by the proposed Kishwaukee Community College.

To further aid the Finance Committee in its work, questionnaires and/or letters were prepared and mailed to eleven private four-year colleges and twenty-two junior colleges in Illinois, Indiana, and Iowa. Responses in the form of college catalogs, financial statements, budgets, and other financial data were received from twenty of the thirty-three institutions surveyed. The committee was primarily interested in tuition costs, mill levies, and capital improvement costs.

The information essential to the Finance Committee was divided into eight specific areas, and the responsibility for obtaining information on each area was assigned to a committee member. The Chapter on Finance is therefore presented under the following general topics:

1. Legal Requirements
2. Bonded Indebtedness
3. Assessed Valuation
4. Costs of Attending College
5. Building Costs
6. Debt Service Requirements
7. Annual Operating Budgets
8. Estimated Tax Levies

Legal Requirements as Related to Finance

House Bill No. 1710, an act in relation to the establishment, operation and maintenance of public junior colleges, and making an appropriation in connection therewith--as approved by the 74th General Assembly, establishes the following financial requirements:

Sec. 2-16 Any Class I junior college district which has been recognized by the State Board shall be entitled to claim an apportionment for each school year ending on June 30 of $11.50 for each semester hour or equivalent in a course carried by a student through each mid-term by each student in attendance.

Sec. 3-1 Any contiguous and compact territory, no part of which is included within any common school district maintaining a junior college or any junior college school district, unless all of such district is included which has an equalized assessed valuation of not less than $75,000,000 and contains either a population of not less than 30,000 persons or at least 3 entire counties or that portion of 3 counties not included in an existing junior college district may be organized into a Class I college district within the state system.

The proposed district shall be authorized to levy rates which shall not exceed .75 per cent of full, fair cash value, or equalized or assessed by the Department of Revenue, for educational purposes, and .10 per cent for building purposes and the purchase of school grounds.

Sec. 3-12 Following election and organization of such Board, as soon as may be, the Board may draw upon the fund appropriated to the State Board for grants to new junior college districts an amount equal to the product of $300.00 multiplied by the projected full-time-equivalent enrollment in the first year of the junior college operation or determined by the State Board, but such amount shall not exceed $100,000.

Sec. 3-14 Subject to the limits imposed by this article, the rates may be increased at a regular or special election held subsequent to the approval of the voters of the establishment of a Class I junior college. At any single election the Board of the Class I junior college district may cause a proposition for an increase of the levy for educational purposes of an annual tax not to exceed .125 per cent.

A Class I junior college board may within the limits set for them in Sec. 3-1 of this Act and in the manner provided in this Article levy a maximum annual tax upon all the taxable property of the district upon full, fair cash value, or equalized or assessed by the Department of Revenue. Within the limits herein provided, the Class I junior college board may annually levy the tax for building purposes and the purchase of campuses so that funds may accumulate to not more than 5% of the equalized assessed valuation of the district. No such accumulation shall ever be transferred or used for any other purpose.

Sec. 5-8 If the State of Illinois makes funds available, the Class I junior college district which has had its project plan approved by the State Board shall be entitled to file a

claim with the State Board in a sum not exceeding 75% of the cost of the project.

Sec. 6-4 Any Class I junior college district may, when the Class I junior college board considers necessary, require a tuition of each student attending a Class I junior college within the district in an amount not to exceed 1/3 of the per capita costs of students in the college transfer and liberal arts programs, such cost being computed by dividing the total cost of such programs, excluding an amount of interest paid on bonded indebtedness, by the average number of full-time students enrolled in such program.

Bonded Indebtedness

The information in Table 6-1 indicates that the total present bonded indebtedness of the eight districts within the proposed Kishwaukee Community College area is $9.5 million. This represents sixty per cent of the permissible bonding power of the school districts. It is evident that where the population has increased that the residents have provided educational facilities for its children. These figures are furnished only as a guide, since the legal limitations on the bonding power of these districts have no effect on the legal bonding power of the proposed Community college; the new college district will have a bonding capacity of 5% of its assessed valuation.

TABLE 6-1

Totals	$ 316.4	$ 15.82	$ 9.51	$ 6.31

Assessed Valuation

The assessed valuation of the eight school districts within the proposed Kishwaukee Community College district is presented in Table 6-2 for the years 1957 through 1964. The projected assessed valuation for the years 1965 through 1970 and 1975 and 1980 are used in the section dealing with the annual operating budget and will be one of the bases for major sources of revenue for both the educational fund as well as for capital improvements.

Although there has been no steady rate of growth, the assessed valuation has increased 14.7% from 1957 to 1964. This same rate of increase, approximately 2%, when applied to the projected growth will increase the valuation 35.6% from 1964 to 1980 for a total assessed valuation of $368.9 million.

The growth potential is even greater with the possibility of: 1) the extention of the present East-West tollway to the Iowa border, 2) a North-South tollway parallel to Route 51, and 3) a projected enrollment increase for Northern Illinois University from its present student body of 14,688 students to 32,970 students in 1980, with related growth in faculty housing, off-campus student housing, and the many small enterprises which are needed to handle the needs of an expanding university community.

Any increase in assessed valuation over and above the projected valuation will have a positive effect on the tax rate; that is, the higher the valuation the lower the tax rate needs to be to produce the same total tax dollar.

Cost of Attending College

Charges for attending college are kept as low as they can be held in view of colleges' determination to maintain and advance their quality academic programs and high standards of teaching. Tuition and fees paid by the individual student generally cover less than two-thirds of the total cost to provide an educational program. The balance is composed of gifts to the colleges from alumni, friends, parents of students, foundations, corporations, endowment income, or taxes as in the case of state colleges.

The total cost of attending college must include tuition, board and room, books, supplies and travel. A survey of ten schools, both private and public (Table 6-3), shows costs ranging from $1,300 at Northern Illinois University to $3,000 for Monmouth College or an average cost of $2,160.

House Bill No. 1710 permits the junior colleges to assess students up to one-third of the per capita costs for expenses related to the educational budget. This is estimated to amount

Monmouth College	1,740	860	400	3,000

to $333 per student. In addition to this amount, there needs to be an amount calculated for travel, books, and clothing for a total of approximately $1,000. The annual savings, therefore, can range from $300 to $2,000 if the student elects to attend the proposed community college rather than one of the institutions listed in Table 6-3.

Building Costs

The Building and Site Committee and the Population Committee have recommended that the campus be developed in two phases. Estimated building costs for the first phase to be built in 1967-1968 for 1,000 students and for an additional 500 students in 1972-1973 are presented in Table 6-4. Because of the present unusual rise in building costs consideration should be given to completing the total building in one phase. It is very possible that interest costs for the second phase would be less than the amount of costs increase attributed to inflation. It is also quite possible that enrollment at the college will exceed the projections, necessitating additional building in the future.

Shown in Table 6-5 are the principal and interest requirements for a $1,080,000 bond issue Phase I at an assumed rate of 4% for 10 years. Debt service requirements for a $760,000 bond issue for Phase II at an assumed rate of 4% for 10 years are presented in Table 6-6.

Annual Operating Budgets

The Curriculum Committee study recommends a comprehensive community college program including college-preparatory education, vocational training and terminal programs. The operating

Totals	760,000	216,200	976,200

expenses for such a program includes cost of instruction, materials, and operation and maintenance of the building. The Finance Committee has estimated such a program to cost approximately $1,000 per full-time-equivalent student per year. Based upon the Population Committee report of anticipated enrollment for the proposed community college, the Finance Committee has estimated operating budgets for separate years as shown in Table 6-7. A graphic portrayal of revenue and expenditure is presented in Figure 9.

Estimated Tax Levies

Future demands on the Kishwaukee Community College will partially be determined by the willingness of the taxpayers in the proposed community college district to underwrite the college's educational and building programs.

The Finance Committee has prepared the financial aspects of the feasibility study taking into consideration an educational program as proposed by the Curriculum Committee for the number of students estimated by the Population Committee to study and learn trades and vocations in facilities planned by the Building and Site Committee. Table 6-8 represents quite clearly that it is financially feasible to petition for a community college for the area composed of the eight school districts.

Summary

The Finance Committee began their work on the financial section of their feasibility study with an inquisitive desire

TABLE 6-7

KISHWAUKEE COMMUNITY COLLEGE PROPOSED ANNUAL ESTIMATED OPERATING BUDGETS

117,000	64,350	28.70	76.19	99.49	122.91

*During the first year of the college's operation, the college will not be in full operation and the bond levy will be minimal. Second-year operational costs and inclusion of a bond levy will require a higher total levy in 1968-69 than that made in 1967-68.

to learn all of the facts before they were willing to make any kind of a prediction on the financial soundness of the proposed Kishwaukee Community College. The information and facts now gathered and agreed upon are:

1. The assessed valuation of real estate at present and in the foreseeable future is and will be adequate to support a community junior college well within statutory limitations.

2. The total annual cost of a community junior college to the local taxpayer will range from approximately 12¢ to 19¢ per $100 of assessed valuation in its early years of operations. This is based on an initial estimated tax rate of 8¢ for education and 4¢ for debt service requirements. In seven years, the estimated educational rate could be 12½¢, and debt service at that time is estimated to be 6½¢.

3. The maximum tax rates set forth in the ballot for creating the college district will be 10¢ for the Educational Fund and 2½¢ for the Building Fund. No amount will be specified initially for bonding purposes.

CHAPTER 7

STATISTICAL SUPPLEMENT

Survey of High School Juniors and Seniors

A questionnaire designed to assess the present educational status and future plans of the high school youth in the area was administered to all of the juniors and seniors in the eight high schools included in the study. Local school personnel, using standardized procedures, administered the questionnaire to all juniors and seniors present on a specific day. Responses were anonymous. The responses were key-punched on IBM cards and analyzed by a computor. Some of the more pertinent results are shown in the following tables.

TABLE 7-1

Survey of Business and Industry

A questionnaire designed to provide information regarding: 1) employment opportunities, 2) types of training available and 3) types of training needed in the area was distributed to employers by the Survey Committee. The survey instrument was distributed personally by the committee members to 40 of the larger firms and mailed to an additional 850 employers. A total of 182 usuable questionnaires were returned. The number of employees reported by these totaled 12,158.

Guide for Establishment and Conduct of Local Advisory Committees for Vocational Agricultural Departments.

California State Dept. of Education, Sacramento. Bureau of Agricultural Education
MF AVAILABLE IN VT-ERIC SET.
Pub Date - Feb67 31p.

*VOCATIONAL AGRICULTURE; *ADVISORY COMMITTEES; ORGANIZATION; *MEETINGS; *PROGRAM PLANNING; *GUIDELINES

In order to provide information for California school administrators, boards of trustees, vocational agriculture teachers, and advisory committee members, this bulletin was developed on the basis of studies and experiences on advisory committees. It provides a rationale for the use of advisory committees and outlines procedures for their formation and conduct. Specific sections outline steps in formation of an advisory committee, procedure of meetings, and annual program plan suggestions. (JM)

LOCAL ADVISORY COMMITTEES FOR CALIFORNIA VOCATIONAL AGRICULTURE DEPARTMENTS

FOREWORD

The use of advisory committees is increasing in our public school system. The experience of advisory committees for agriculture departments in other states and in California, are valuable for districts contemplating forming such lay groups. Suggestions for procedure are likewise valuable for newly-formed committees.

The purpose of this handbook is to provide information for school administrators, boards of trustees, teachers of vocational agriculture, and committee members themselves. The reasons for establishment of advisory committees are given. Procedures for establishing and conducting the meetings of advisory committees are suggested.

This handbook has been made possible by drawing upon experiences in this state and from studies and publications in states in which use of advisory committees for agriculture departments has had a long history. Of particular value have been the materials

developed by Dr. H. M. Hamlin of the teacher-training staff in agricultural education, University of Illinois. Other bulletins and texts have likewise supplied much valuable information.

The Vocational Education Act of 1963, points out the need for and use of advisory committees in maintaining, extending, improving and developing programs of vocational education.

Advisory committees will play a vital role in vocational education programs in the future. The ideas presented are guide lines that have been successfully used by schools and may be modified to fit local conditions.

BYRON J. McMAHON, Chief
State Bureau of Agricultural Education

INTRODUCTION

Advisory committees for education in various fields and on various levels are established devices for using lay resource people to assist professional education staffs. Agricultural education in the secondary schools has as great a need for such committees as any field of education, and in many states agricultural advisory committees have been an accepted and valued aid to all or most of the departments. In California, there is a growing appreciation of the need for and assistance which may be provided by, local agricultural councils or committees.

Changes in agriculture in California make extremely valuable the organized assistance of successful farmers and other leaders in agricultural business to the agriculture department. Agriculture today is a highly-scientific, mechanized and ordered procedure; yet new machines, materials and methods are appearing constantly. Employment opportunities in agriculture change, develop and expand almost overnight. It is

virtually impossible for an agriculture teacher to "keep up to date" on all agricultural changes, and still carry the heavy routine expected of him.

Many areas of California are changing from rural to semi-urban, yet even in the latter there is a demand and need for practical instruction in agriculture. Increased farm production per operation demands higher training in skills and techniques and more individuals gainfully employed in specialized occupations. To keep abreast of these conditions is one of the purposes of an advisory committee. The increasing number and complexity of school farm laboratories also heightens the need for advisory committees.

The need and encouragement for local advisory committees in agriculture has been further implemented by the establishment of a state advisory committee. This state group, which advises the Bureau of Agricultural Education on a statewide basis, consists of nine outstanding agricultural leaders, many of whom have had long experience as school board members and on local advisory committees. They have seen at

at firsthand the advantages of these local groups.

The Vocational Education Act of 1963 broadens the spectrum of vocational agriculture. While work experience is still a requirement, it may not necessarily be "on the farm." It may relate to work experience in any of the many agriculture-related fields in which California leads the nation. Special attention is given to the education for potential dropouts and for disadvantaged groups, for the out of school young farmer and for adults. Federal funds are available to assist local districts in developing programs for these needs. Advisory committees not only provide a valuable potential of assistance, but may be virtually a requirement for some of these programs.

The importance of advisory committees is emphasized in a quotation from "Administration of Vocational Educational Education at State and Local Levels", a publication for superintendents and board of trustees, prepared by the American Vocational Association:

"It would be difficult to over-emphasize the importance of advisory committees as a feature of all types of vocational education programs. Like many other effective techniques of instruction and coordination now used throughout the actual program, the use of lay advisory groups was first pioneered by vocational education.

"A vocational advisory committee is a practical device by which the school system keeps in contact with the groups in the community that it is trying to serve. Members of advisory committees are laymen from the various professions and occupations who have had broad experience in their fields, and have gained the confidence of their working associates, as well as the general public.

"...School authorities should not distrust advisory committees as potential usurpers of their functions. Lay advisory groups have no administrative or legislative authority and cannot establish policy or take the place of the administrator and the board of education. The purpose and function of advisory

committees is to provide a two-way system of understanding and communication between the school and the community...School administrators should respect and solicit the democratic assistance of representative advisory groups in building a vocational education program which is responsive to the changing needs of the American people and fundamental to the economic well-being and security of the nation."

The word "committee" is herewith used defining the lay group which is set up to assist the total program of agricultural education in a school district. Divisions of responsibility within this group are known as "subcommittees."

THE ADVANTAGES OF ADVISORY COMMITTEES

Advisory committees are not new in California. Many have been functioning for more than two decades. Approximately 150 secondary school centers which offered Veterans Institutional-on-Farm training programs in the World War II post war period, had advisory committees. Schools which have operated programs under the Manpower Development & Training Act have utilized such councils. But of the total number of advisory committees created, relatively few meet regularly. Many are looked on only as pressure groups, or a means to solve a problem. The use of an ongoing committee which meets several times during the year to consider current and vital problems can provide a valuable, organized contact with the agricultural economy and its related activities. It can give new ideas and make suggestions for improved programs of agricultural education.

Most agriculture teachers seek the advice of individuals in carrying on their programs. The advantage of an advisory committee over occasional visits

with leading agriculturists is that it makes possible more efficient use of time; it assures the teacher that he is obtaining opinions that represent the community; and it provides for thoughtful, considered opinion. A teacher who goes to individuals for advice tends to seek advice from his friends, who are probably his friends because they believe the same way he does. The result is that he often receives the type of advice he wants to receive. Individuals asked for advice are sometimes unwilling to give the time necessary to study the problems presented. In such cases the advice received is often based on snap judgment or prejudice rather than considered judgment.

In terms of what can be gained from using advisory committees, the following points are pertinent:

1. Improve public relations by providing two-way communication between an agriculture department and representative citizens of a community.

2. Help in developing a program of agricultural education tailor-made for a particular community based upon the crucial needs of a community and designed to meet the needs of those being educated.

3. Represent the laymen of a community in systematic evaluations of a department which result in better objectives, improved programs, and more adequate facilities.
4. Guide and support a teacher of agriculture, making it possible for him to be more effective, to gain more satisfaction from his work, and to advance more rapidly in his profession.
5. Provide a continuing program where teachers change, and prevent frequent changes of teachers.
6. Assist in adjusting a department program to emergencies and to gradual changes, thus keeping it more nearly up to date, and able to serve the future rather than the past.
7. Correlate the work of a department with that of other agencies (working with agriculturalists) with which committee members may have close relationships.
8. Assist a school administrator and a local governing board by making plans and suggested procedures, saving their time.

9. Assist an agriculture department in resisting inappropriate and unreasonable demands from outside the school system.

10. Develop committee members, particularly the younger ones, into valued community leaders.

11. Assist in disseminating new agricultural ideas, back into the community.

12. Assist school administrators in evaluating the agricultural education program.

STEPS IN FORMING AN ADVISORY COMMITTEE

Much of the success of an advisory committee is determined by the manner in which it is formed. Based upon the experience of many communities throughout the United States, the following steps are suggested:

Preliminary Investigation and Understanding. There must be a feeling of need and an understanding of opportunity, if an advisory committee can succeed. It is not enough that the agriculture department is "doing all right the way it is", if by the assistance of an advisory council it could better serve the district. It is also highly important to remember that teacher changes may take place at any time, and perhaps with little notice; the department which is "doing all right" today may badly need tomorrow the continuity which could be provided by a lay advisory group.

It is important that the school administration, including the professional agricultural education staff, as well as parents and other patrons of the school,

thoroughly understand the character and purpose of the committee. Such preliminary dissemination of information must be made without prejudice. Both sides of the problem should be presented and discussed. An advisory committee that is "crammed down the throats" of any school segment is bound to fail.

Understanding of Responsibility. Of greatest importance is the understanding that the committee is only advisory in character, and that its advice is to the board of trustees, to accept or reject. It has no administrative or policy-forming power. The good com-committee will make suggestions on policy and procedure, but the source of its authority is the local governing board. If this single fact is constantly kept in mind, many problems will be avoided.

Nomination of Committee Members. Several factors must be taken into consideration when the selection of committee members takes place. Among them is the fact that the advisory committee is responsible to the board of education. The policies of the board must be

carried out by the principal or superintendent. The committee must work closely with the teacher of agriculture or the department head in a multiple-man department

It is recommended that, upon the approval of the formation of an advisory committee by the trustees, the nominations should be made jointly by the principal or superintendent, the head of the agriculture department, and the chairman of the school board. Each should have an equal voice in the selections, even though the teacher may be most familiar with the agricultural people and may have most of the suggestions. The group should not be "the teacher's friends", for very often his closest friends will not honestly advise him. The true basis for nomination is discussed in the following paragraphs.

Who Should be Nominated. The advisory committee should be truly representative of the district. In general, its members should be successful farmers or individuals permanently engaged in a significant re-

lated occupation. A few examples might be a veterinarian, operator of an artificial breeding establishment, agricultural appraiser for a bank, operator of a greenhouse or nursery, operator of a livestock feed lot, operator of a poultry hatchery, brooding or fattening operation; farm machinery dealer or farm management service operator. The criteria should be whether the operation represented is one which employs young men with agricultural training, either directly out of high school or after post-high school education. Farmer members should be representative of different important agricultural commodities, different parts of the district, different age groups, different farm organizations and different nationalities and religions.

No committee member should accept his responsibility thinking of himself as the representative of any special group. Instead, he must be a public-spirited citizen who understands what is expected of him and must be willing to give his advice in a constructive manner, as a member of an organized group and under a plan of recognized procedure.

It seems sound policy in California to generally recommend that not more than one school board member should serve on an advisory committee. Care must be taken in the selection of non-farmer members who may have frequent dealings with the department or the school district. For example, if the department operates a school farm, there could be a "conflict of interest" if a farm machinery dealer is on the advisory committee. If an ornamental horticulture unit at a school provides a source of project income for students, meeting all of the legal requirements for sale of products, the inclusion of a nurseryman who might view this as "unfair competition" could be a source of irritation.

Even though related occupations are becoming increasingly important, the advice of practical and successful farmers must continue to be the core of the advisory committees in most communities. Most agriculture teachers find their greatest need in relating the work experience program to the classroom instruction and laboratory-field trip activity. The better farmers can advise on trends, land prices, improved practices.

and the scope and nature of agricultural education needed in various enterprises and farm operations. An advisory committee composed entirely of agri-service "professionals" will rarely meet the needs of most vocational agriculture departments.

How Many Committee Members. No fixed number is suggested. The group should be large enough to be truly representative of the district and to provide a working quorum if two or three are absent. However, it should not be so large as to be unwieldy or difficult to call together. 7 to 12 persons are suggested, with perhaps 9 as a desirable medium.

It is recommended that when the number is decided upon by the local governing board, only this number of names be presented to the board for confirmation. It has been found when more than enough names are submitted, personalities become involved and the results are not desirable.

Who Notifies Committee Members of Their Selection. Notification is usually done by the principal or super-

intendent, on behalf of the board of trustees. The letter should indicate clearly that the agriculture teacher cooperates in such a plan and that the committee serves merely in an advisory capacity to the board. A request should be made that the member indicate whether or not he will accept.

Experience has shown that where all of the steps up to the point have been properly taken, including publicity regarding the desirable features of, and responsibilities of, an advisory committee, a high percentage of acceptances may be expected. Often the nominee will ask for an opportunity to "talk it over" with the agriculture teacher or with his neighbors. Speed in acceptance should be urged because a committee whose selection is long drawn-out may start its work with a feeling of "frustration".

What Should Committees Do? Before an individual accepts responsibility on an agriculture advisory committee, he may want to know specifically the responsibilities of committee membership. Here is a suggested list of certain of these responsibilities:

(1) Advise any new teacher on the agriculture and problems in the community;

(2) Assist teachers in deciding on practicability of portions of program;

(3) Assist teachers in developing annual and long-term programs;

(4) Assist teachers in unifying activities of agricultural education program with other groups and agencies interested in agriculture;

(5) Study problems presented by board on which further information is needed, and make recommendations;

(6) Advise on supplies and equipment needed;

(7) Assist in determining agricultural education needs for the entire community within the framework of all new vocational education acts; and

(8) Visit the supervised practice programs of students, and visit agriculture classes and demonstrations.

PROCEDURE OF MEETINGS

Previous sections have indicated advantages of the advisory committee and suggested steps in forming such a body. The third important factor is that correct

rules of procedure be established, and clearly understood by the committee members, the school administrative staff, and board of trustees. The rules should be drawn up by the committee itself, with such assistance as it desires. Here are some items which should be considered.

How Often Should the Committee Meet? The best answer is "often enough to accomplish its purpose". Monthly or bi-monthly meetings, except perhaps during the summer are probably most desirable, although there is no reason for a committee to meet unless it has a constructive agenda. A minimum number of meetings is probably three, and a likely number somewhere between this minimum and eight. The kind of advice which is most valuable is often from busy people who may be serving on other committees.

It is better to have fewer meetings well attended, than too many meetings.

What Officers Should be Selected? Generally, a chairman, vice-chairman, and secretary are sufficient. As the committee gains in experience, sub-committees with chairman and/or other officers, may be found to be necessary.

How Long Should Committee Members Serve. A term of 3 years has been found most desirable. At the formation meeting, members may "draw" for one-year, two-year, and three-year terms, thus setting up the rotation method and providing for continuity of membership. Members may want to state a preference in length of service, and it may be found desirable to have an individual on the committee for the first "formative" year, even if he feels that this is all the time he can spare. Members may be re-appointed but there may be a desirable limit on re-appointments. The committee actually serves at the pleasure of the board of trustees, and may be dissolved at any time by board action.

Length and Place of Meeting. Meetings must be properly planned to prevent them from dragging out, as some committee members may have driven considerable distance to attend a committee meeting after a busy day. In general, a two-hour meeting should secure good results- generally starting at 8:00 and ending promptly at 10:00. Some success has been found with dinner meetings.

In general, the meeting should be held in the agriculture department of the school. In this way, members have an opportunity to become familiar with the facilities of the department and blackboards, paper for notes, and other necessary equipment for the meeting are readily available. Most effective participation by all members usually results when the group meets around a conference table.

How Are Vacancies Filled. Vacancies which occur on the committee, either because of completion of the term of office or for some other reason between terms, should be filled by nomination from the same three persons- teacher, principal or superintendent, and board of edu-

cation chairman. However, the committee itself should be asked for suggestions. A committee should not be permitted to choose its own replacements, for it then is self-perpetuating and may become unrepresentative and unduly independent of the school administration.

Probably the rules of procedure should indicate that if a committee member misses meetings repeatedly without cause, his position may be (or must) be declared vacant by the chairman of the committee, and the school board so notified. However, if the committee is performing a real function which its members understand, and if they can see that their advice will ultimately result in a better agriculture, they will probably be sincere in their attendance.

THE YEAR'S PROGRAM

The activities of an advisory committee are largely determined by the problems of the school and community, the character of agriculture, the facilities of the department and other determinable factors. Topics and problems which might be considered during the typical first year of committee operation, might come from this group:

1. The role of the vocational agriculture department in the community.

    a. What are the purposes of the vocational agriculture department

    b. To what extent is the department achieving these purposes. (use of evaluation material).

    c. How many in-school youth, Young Farmers and adult farmers are reached at present with organized, systematic instruction.

    d. How many persons in the school area should the department serve.

2. An evaluation of the agricultural situation in the community, including the needs and efficiency of the farmers. Each meeting should be ended with some definite suggestions and plans for the im-

provement of these situations.

3. The occupational placement and opportunities in agriculture available to young men in the community.

4. The supervised practice and programs of the all-day students. This could well be followed by a field trip to observe the agricultural programs of representative students.

5. The development of a chapter program of work for the Future Farmers of America. Meetings should be held with the executive committee of the chapter and with the entire chapter. This particular phase may be assigned to a sub-committee of the advisory committee.

6. The development of plans for cooperation and understanding with agricultural groups.

7. The development of plans for cooperation with governmental agencies dealing with agricultural problems.

8. The development of suggestions pertaining to the buildings and facilities needed in the local department.

9. The encouragement and development of essential com-

munity facilities such as an artificial breeding association, cow testing, fairs, contests and soil improvement.

10. The promotion of annual meetings for the following purposes:

    a. A social program for the advisory committee members and their families.

    b. Joint meeting with the board of trustees

    c. An evaluation of work done during the last year.

    d. Planning the program for the next year.

    e. Visitation of classes in the all-day, Young Farmer or adult levels to improve the program.

Who is Responsible for the Agenda. The agenda is the plan for the meeting-the device which saves time, prevents important items from being overlooked, and presents ideas in a logical manner. The man who is most familiar with the problems is the agriculture teacher. He should draw up a list of suggestions. It is generally desirable to check this list with the principal or superintendent, who in turn may ask the chairman of the school for his ideas. The chairman of the advisory committee should also be asked for items he may have.

The agenda as agreed upon by all concerned should be mailed by the school office to the committee members, preferably a few days ahead of the meeting. This permits time to investigate and become familiar with conditions surrounding some of the problems. It is important to have an agenda that is not a "cut and dried" limitation on topics which may properly be presented. More can be accomplished by preparing the right kind of an agenda and sticking to it.

A typical agenda for a meeting might be as follows:

a. Reading of minutes of the last previous meeting.

b. Progress report by the director of agriculture on suggestions made at the recent previous advisory committee meetings.

c. Consideration of recommendations for the purchase of instructional equipment and supplies.

d. Review of freshman course of study, with suggestions.

e. Recommendations on kinds of activities for the Future Farmers during the next quarter.

f. Consideration of crop rotation plan for the school farm.

g. Consideration of the advisability of a short course in dairy production for Young Farmers and adults.

h. Setting the date for the next meeting.

i. Adjournment

CONCLUSION

In many ways, farming communities are much alike, whether they are in the "corn belt" or in one of California's central valleys. Advisory committees have been found successful in many areas. Generally their failures have resulted from poor organization, poor selection, or faulty understanding of purposes and limitations, rather than from any inherent weakness in the area of an advisory committee.

Here are some interesting comments secured from representative people in one community where a committee had functioned as it should:

"It has developed in this area. I think it is essential."

"It develops interest on the part of the community."

"It keeps interest in their work, helps lead the community."

"If I were a board member, or a teacher of agriculture, I would want an advisory committee."

"Capable people represent the community."

"The committee backs the teacher's program and gives him confidence."

"The school has a better picture of the farmers' view-point."

"Farmers are more willing to send their children to high school."

In California a significant statement was made by the chairman of the state advisory committee who had served as a school board member for more than 20 years, and then served on the local advisory committee. He said that in his community, the school board welcomed the work of the advisory committee because board members could not possibly know all the needs and problems of the school; the advisory committee studied, summarized and brought to the attention of the board the specific needs of agricultural education.

Proper recognition for the work of the advisory committee should be given by publicity released by the board of education. This practice would encourage acceptance of membership on the committee and participation in meetings. It also keeps the public informed

of the services of laymen to the secondary school as a community operation.

California school administrators are recognized for their willingness to accept new ideas and methods. The advisory committee has become recognized throughout the nation as a valuable aid to education. A bulletin "Vocational Education in the Junior College", published by the California State Department of Education in February, 1949, says:

"....The educational authorities are responsible for encouraging representative persons...to serve the schools and the community on such (advisory) committees; the committee members, in turn, have definite responsibilities in carrying out their advisory functions. It is only when these practices actually become an integral part of the training program that vocational education can make its maximum contribution."

Manual for Institutional Self-Study - Community Colleges, Technical Institutes, Industrial Education Centers.

North Carolina State Board of Education, Raleigh. Dept. of Community Colleges
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 65 36p.

EVALUATION; FACULTY; PROGRAM EVALUATION; *SELF EVALUATION; *EVALUATION METHODS; *COMMUNITY COLLEGES; *EDUCATIONAL OBJECTIVES; ACCREDITATION (INSTITUTIONS); ACADEMIC STANDARDS; TECHNICAL INSTITUTES; VOCATIONAL TRAINING CENTERS; *ADMINISTRATIVE ORGANIZATION; FINANCIAL SUPPORT; FACILITIES; STUDENT PERSONNEL PROGRAMS
NORTH CAROLINA

This manual for self-evaluation assists the institution not only in examining its purposes and educational activities, but also in determining the modifications that may be needed to serve its people more effectively. The institution desiring to meet accrediting agency requirements should contact the specific agency prior to initiating the study. The administrators and faculty members work cooperatively to learn more about their institution, whether it be an industrial education center, a technical institute, or a community college. This institutional self-study is a comprehensive study designed to determine how the institution may achieve its role more effectively through its resources, faculty, students, and program. An outline is given of procedures to be followed in completing the self-examination for which about one year is required. If striving to meet accrediting requirements, a visiting committee will be invited to spend time on the site to evaluate the institution. Suggestions in detail given for self study include these aspects: (1) The Purpose of the Organization, (2) Organization and Administration, (3) Financial Resources, (4) Educational Programs, (5) Faculty, (6) Library, (7) Student Personnel, and (8) Physical Plant. The appendix includes forms for enrollment information, academic preparation of the faculty, and library information. (MS)

In a self-study, the institution begins by an examination of the purposes which it is seeking to accomplish and the educational activities which it has in operation to accomplish them. In an effective self-study the institution not only examines its purposes and educational activities, but tries to determine what modifications may be needed to more effectively serve its people and how these modifications may be brought about.

The Manual for Institutional Self-Study was developed by the Department of Community Colleges, in cooperation with the institutions in the Community College System and the Department of Industrial Education at North Carolina State University.

In developing this manual, the Manual for the Institutional Self-Study and Periodic Visitation Programs, Commission on Colleges, Southern Association of Colleges and Schools, Atlanta, Georgia, 1963 was used extensively.

It is anticipated that a self-study conducted by an institution using this manual will meet the requirements of other accrediting agencies; however, to avoid any misunderstanding, contact should be made with any accrediting agency by which the institution expects to be accredited prior to initiating the study.

MANUAL FOR INSTITUTIONAL SELF-STUDY

Purpose of the Manual

This manual is to be used as a guide for making institutional self-studies in industrial education centers, technical institutes, and community colleges. Extension units should be included with the parent institution in the self-study. The manual suggests to faculty members and administrators in the institutions the organization and procedures to be followed and the questions to be considered in the study.

What Is an Institutional Self-Study?

An institutional self-study is a method by which the administration and faculty members can examine and become better acquainted with their institution. As a part of the study, a report is prepared. At the conclusion of the self-study, a visiting committee reviews the report and visits the institution.

In conducting a self-study, there should be an extensive involvement of all faculty members and administrators.

The self-study is to be comprehensive. It should be an effort to examine the past and the present in resources, faculty, students, and programs in terms of stated purposes and objectives. This is far more penetrating than a self-study which merely gathers information. In this same searching way, it seeks to determine how the institution may achieve its role more effectively through its resources, faculty, students, and programs.

Why Make a Self-Study?

The essential purpose of the self-study is to improve the educational effectiveness of the institution. The very process of self-study, provided there is good involvement of faculty, administrators, and board members, is a type of professional and institutional improvement. The purpose of the institution and the most effective methods to be used to accomplish the purpose become clear to

all concerned. The self-study permits the people involved in the study to become sensitive to the strengths and weaknesses of the institution and to make plans for correcting the limitations.

Accrediting agencies require institutional self-studies. Thus, the process of self-study will help to prepare the institutions for possible accreditation.

Organization and Procedure for Conducting a Self-Study

The purpose in outlining the following procedures is to provide institutions with the steps to be followed in conducting self-studies. The implementation of these procedures will enable the institution to assess (measure) its educational programs to determine whether they fall below, conform to, or exceed approved standards. The Director and professional staff of the Department of Community Colleges stands ready to be of service to any institution as it conducts a self-study.

1. The institution should secure approval from its board of trustees to conduct a self-study.

2. The Director of the Department of Community Colleges should be notified of the beginning date.

3. The Director will appoint a professional staff member to make available to the institution the resources of the Department of Community Colleges while the institution is conducting the study. Prior to the completion of the self-study, the Director, in consultation with the president of the institution, will appoint the chairman of the visiting committee. The committee chairman and the Director will appoint other members of the visiting committee. The visiting committee should be appointed at least three months prior to the dates set for the visit.

4. Each institution should appoint a steering committee with representatives from the administration and faculty. This committee should have responsi-

bility of explaining the study, its purpose and procedures, to the faculty, administrative officers, and board of trustees. The committee should have over-all supervision of the study and responsibility for organizing the material into a coherent report. The steering committee will be a working committee, meeting frequently and making decisions; therefore, it should be small, consisting of three to five members.

a. The chairman of the steering committee should arrange for the appointment of appropriate committees to cover each aspect of the study as outlined in the "Content of the Self-Study." The chairman may also arrange for the appointment of necessary subcommittees in divisions so that all areas of the institution may be evaluated. Committee organization may include an editorial committee to prepare the final self-study report which should be a narrative, unified document.

b. The steering committee should set up a time schedule for:

   (a) Gathering preliminary information and material,

   (b) Regular meetings of the committees for the discussion of findings,

   (c) Reporting quarterly to the Director of the Department of Community Colleges on the progress of the self-study,

   (d) The final organizing, editing, and reproducing of the report which must be in its final form with sufficient copies for distribution to members of the visiting committee at least three weeks prior to the date set for the committee visit.

5. A working definition of the purpose of the institution should be developed at the beginning of the self-study, with full involvement of all personnel. The self-study report should follow the outline of the "Content of the Self-Study." The report can be supported by the necessary charts, graphs, and other illustrative material. Since the purpose of the self-study is a critical analysis of the institution itself, there should be frank recognition of weaknesses and problems, with recommendations for solutions to the problems. The report should stress the critical areas, unique programs, and facets of the institution which are of special interest or concern to the faculty, administration, and governing board. The report will be considered confidential by the members of the visiting committee.

6. It is expected that about one year will be required to complete the institutional self-study. Once the approximate completion date of the study and report is determined, the president of the institution should notify the Director of the Department of Community Colleges of suggested dates for the visiting committee to visit the institution. At least two days should be planned for the visit. The visiting committee will study the institutional study report. It will visit in the institution sufficiently to examine it and identify its strengths and weaknesses. It will prepare a constructive written report of its findings. A primary function of the visiting committee will be to evaluate the institution in terms of its purposes and encourage the institution in looking toward better ways of carrying on the educational process. The committee will also recommend whether or not the institution should make application for accreditation by the Southern Association.

CONTENT OF THE SELF-STUDY

Although in the suggested outline for the contents of the study the manual lists many questions, it is not suggested or expected that these can be answered "yes" or "no" or that the self-study be limited to the scope of these questions. They are intended to be provocative and should be answered where possible in essay form.

The report of the study should contain a brief introduction which will include a short historical sketch of the institution. The sketch should give the nature of the institution's origin and development. It may also show dates of significant changes in the history of the institution, as in curricula, type of control, type of student body, and scope of operation.

The introduction should describe the organizational pattern and the various committees that participated in and contributed to the institution's self-study.

The remainder of the report would include the following aspects of the institution:

The Purpose of the Institution

Organization and Administration

Financial Resources

Educational Program

Faculty

Library

Student Personnel

Physical Plant

I. PURPOSE

Describe the role that the institution fills in education. Give the official statement of purpose of the institution. Illustrate the extent to which the purpose is being fulfilled through its offerings and programs.

Describe the origin and modifications of the statement of purpose. Illustrate the relationship of the statement of purposes to acts of the State Legislature, policies of the State Board of Education, and other agencies and sources.

Does the present statement represent the views of the governing board, the administration, and the faculty and are these groups fully acquainted with and in sympathy with the statement? What action is taken to acquaint the governing board, staff members, and faculty with the purposes of the institution and to enlist their support of all of the purposes of the institution? What are the concepts of the faculty and of the governing board as to the distinctive features of the institution?

To what extent, before or during the self-study, has the statement of purpose been subject to critical review: to reveal over-all discrepancies between purpose and fulfillment? to analyze internal departmental functions in relation to purpose? to examine the adequacy of financial resources, physical plant, educational program, and other resources to meet the stated purpose? to determine the relationship between the services rendered and the needs of the surrounding area as well as the needs of the constituency? to study the role of the institution in relation to the roles of neighboring institutions from the standpoints of duplication, competition, and cooperation?

To what extent do the institutional publications, public relations media, and day-by-day approaches to prospective students and the general public present a fair and accurate picture of the role of the institution and its facilities for fulfilling this role?

In the study of the purpose of the institution, what weaknesses have been

revealed in the statement and what steps are being taken to bring about the necessary changes?

II. ORGANIZATION AND ADMINISTRATION

What is the legal authorization of the institution? Does the legal authorization or document define the organization of the governing board (board of trustees)?

What is the legal name of the institution? Does this name reflect the overall organization and scope of activities of the institution?

How is the board organized? Describe its structure, including its size, method of election, and length of terms. In what official document are the duties and responsibilities of the board defined? Are the powers of the governing board clarified with respect to powers vested in other agencies such as the Department of Community Colleges?

Indicate the name of each trustee, his background, the appointing agency, and his term of office.

List the committees of the board and indicate the function of each. Illustrate the contributions made by each committee since the board has been organized. Where are there weaknesses and where are there strengths in the committee organization and in the performance of functions? (The board of trustees should deal with these and other appropriate questions in this section.)

What major decisions have been made by the governing board since it has been organized? How recently has the board studied and defined its responsibilities and evaluated its contributions to the institution? Is there a tendency for the board to go beyond policy making and into administration of the institution? Who reports directly to the board? How actively has the board participated in the study?

Are there any lay or professional groups, such as advisory committees, which serve in advisory capacities to the governing board or the administration? If so, describe the organization and function of each and evaluate its services to the institution.

Chart in broad outline the institution's organization from the board of trustees through faculty committees. The following detailed charts should be drawn and cross reference made to them in other appropriate sections of the report:

a. Administrative Organization of the Faculty, giving details for each department and division and showing the line of responsibility to the president.

b. Administrative Organization for the Student Personnel Program, including recruitment, admissions, counseling, health, student government, extra-curricular activities, and housing.

c. The Administrative Organization for Finance, Business Management, and Plant Operations.

Are there any extension units which are not organized within one of the general patterns outlined above? If so, present and evaluate details of their administrative organizations.

Describe the duties and responsibilities of each administrative officer. Are these duties and responsibilities clearly defined, understood, and accepted by the institution personnel? Is the institutional organization properly planned, staffed, and directed for cooperative decisions and policy making and for expedient executing of decisions and policies. Through what channels can students and faculty express themselves to the administration and make known their suggestions as to procedures and policies?

Do budgetary allotments, staff allocations, and the over-all organization of the institution reflect emphasis on instructional, business, and student affairs consonant with the aims and objectives of the institution?

Have the nonprofessional personnel, services, and facilities received proper emphasis in the development of the total program of the institution? Are the clerical, maintenance, and other services properly organized, adequately financed, and efficiently operated? Is there a classification system for nonprofessional personnel in areas such as clerical services, plant operation and maintenance, and auxiliary enterprises? What qualifications are required for nonprofessional administrative and service personnel? What retirement provisions, insurance groups,

and other benefits are available to the nonprofessional group? How do these compare with those available to the professional personnel?

What changes in administrative organization, procedures, and policies are suggested to bring together the human and other resources and coordinate them more effectively to accomplish the aims and objectives of the institution?

III. EDUCATIONAL PROGRAM

Admission

Discuss the relationship of the educational program to the purpose of the institution. Are the scope and variety of the educational program in keeping with the mission to which the institution is committed? Are the admission policy, the degrees and diplomas offered, and the courses and methods of instruction designed to enable the institution to achieve the objectives of the purpose? Does the educational program coordinate the diverse programs, yet permit each program to operate in a manner suited to achieving its individual aims? Describe the procedure used in determining the inclusion of noncollegiate or "specialized education" curricula in the total program.

Describe the control and administration of admissions in each program of the institution. Do the admissions policies reflect the educational program? How are policies and procedures coordinated through the institution?

Is the admission policy clearly stated in published material? How was it established and how could it be changed? Describe briefly the underlying principles on which it is based. Has it proved to be effective in admitting students who can benefit from the educational program? Are revisions needed? What modifications, if any, are projected for the future?

Discuss in detail the procedure for admission. Is the same procedure required of all students? How are exceptions to policy made? In general, what exceptions have been made in recent years and how have the students fared who were admitted under these conditions? Describe in detail the procedure for admission into noncollegiate or "specialized education" programs. Describe any policies governing early admission or advanced standing for freshmen and evaluate the success or failure of these. If studies have been made to correlate secondary school grades and entrance test scores with college grades, how have the results of these been used? How are the secondary school record and test scores used in guidance and placement?

Describe and evaluate the academic orientation program for new students at all levels. What procedures are followed to provide continuing guidance and counseling--academic and vocational?

Do the enrollment statistics indicate any trend with which the institution is concerned? Is the enrollment stabilized or does the institution anticipate an increase or decrease in future years?

Describe the recruitment program. What personnel are used and what material is sent prospective students? Who administers the program of scholarships and financial aid for new students? What procedures are followed in determining the needs and merits of applicants? Does the institution anticipate a greater need for financial aid in the future and what plans have been developed to meet this need?

If the institution admits students from foreign countries, what process is followed in evaluating their previous educational experience? How does the institution determine whether or not the foreign student can communicate adequately in the English language? Are special guidance and counseling provided?

Curriculum

Describe the process by which the curricula are administered, indicating the areas of responsibility assumed by the governing board and by the faculty. Illustrate how changes are made.

Examine in detail the scope of the curriculum in connection with the purpose and the resources of the institution. Are the technical programs or noncollegiate vocational programs clearly identified as "specialized education" in all publications describing these programs? Are there degree or diploma curricula which should be eliminated or added? What studies have been made in recent years to evaluate the curricula in terms of the institutional purpose? What have been the conclusions of the studies and how have they been used? What changes have been made in the last five years and what future changes are anticipated? In making

changes and developing new programs, what studies are made to determine the need?

Describe all general education requirements and indicate how the present program evolved. Give any tangible evidence of the effectiveness of this program. Has the opinion of the faculty and students been sought and utilized? What continuing evaluation is planned?

Are curricula in "specialized education" designed and offered to fulfill the objectives of providing skills, knowledge, or understanding needed for employment in a particular occupation or cluster of occupations at a specific level? How are new curricula or offerings brought into the program of the institution?

Comment briefly on the major fields of concentration in each curriculum. In relation to the enrollment and resources of the institution, is there a need to expand or contract these? What efforts are made to avoid undue proliferation of course offerings? What limitations are placed upon the number of hours required in major areas? Is there room in each program for electives? Is the system of prerequisites for advanced courses clearly stated and consistently enforced?

Does the institution record and file class enrollments for all noncollegiate courses and programs? How are "specialized education" courses identified on student records or transcripts?

What provisions are made for especially gifted students? Describe the methods used to encourage students to undertake honors work or independent study. Indicate the number of students and faculty involved in these programs. If students of limited ability or with deficiencies are admitted, what programs are provided for them? How effective are these programs for the exceptionally gifted or the below average group? Does the institution anticipate a need to expand either or both?

Describe the policy of academic probation and dismissal. How and by whom is it administered? Describe the procedure for readmission. Does a study of the statistics in this area indicate a need for change in the admission or grading policies? Examine the grade distribution in all programs for several years. Are

there problems here that need attention?

Describe the efforts that have been made to evaluate the effectiveness of instruction at various levels. Have objective tests been used, and, if so, how have the results been used? What efforts have been made to focus faculty and student attention on this matter? What evidence is available to show how student achievement compares with that in similar institutions?

Comment on any studies that have been made to determine the relationship between class size and effectiveness of instruction. Do the results indicate any future pattern for the size of classes? What devices and procedures are used in very large classes to make instruction more effective? Evaluate the effectiveness of closed circuit television, recorded lectures, and other electronic devices where these have been used. What methods of instruction seem to hold promise for the future?

Has the institution come to any conclusion concerning the relationship between teaching loads and the effectiveness of instruction? What types of assistance are most helpful to instructors with unusually heavy loads? What methods are used to encourage the instructor to give a variety of types of examinations?

What tangible evidence is available to show that the institution is creating a learning atmosphere on the campus? What extracurricular activities are used to enhance the instructional program? Are books for recreational reading available in the library and bookstore and do students make use of these? What percentage of graduates go on to senior colleges or accept employment in their major field of study? What does a study of their records indicate? Comment on the number of students who have in recent years received fellowships or scholarships for continued study, and/or advancement in positions of employment.

What studies have been made of graduates and what do these studies indicate about the effectiveness of instruction in the institution?

IV. FINANCIAL RESOURCES

The institution should determine the relationship between its financial resources and the quality of its instructional and service programs. Chart the amount and the percentage of the total of the various items of income for the past three years.

Using the above chart as a basis for study, draw conclusions in regard to the stability of various sources of income and trends in appropriations from State or local governmental agencies.

Describe the nature and amount of the present indebtedness, if any, and describe provisions for its amortization.

Evaluate the organizational plan of the business office and for the administration of financial resources. Are all business and financial functions of the institution centralized under a business office responsible to the president?

Who has the responsibility for the following functions and why are the responsibilities so assigned?---preparation of the institutional budget; control of the budget; accounting and financial reporting; operation and maintenance of physical plant; purchasing, inventory control; financial management of auxiliary enterprises; receipt, custody, and disbursement of funds; internal auditing.

Is there a thorough understanding that the purpose of the business office is to serve the institution and assist in the furtherance of its educational program?

Balance sheets for at least the past three years should be available.

Chart the amount and the percentage of the total of the various classifications of instructional services for the past three years. Relate this to student contact hours taught.

Chart the number of employees for the past three years for such categories as principal administrative, teaching staff, other administrative and clerical, and custodial and maintenance.

On the basis of the above information, do the educational expenditure patterns

carry out the purpose and objectives of the institution? Do the educational expenditure patterns indicate the proper balance between the various functions? Are there curricula or programs which are inefficient?

Describe budget making procedures from the departmental level through the governing board. Consider particularly the role of the department heads, directors and/or deans, the business officer, and the president. Is the budget making accompanied by educational planning? Who is the chief advisor to the president in the financial determination of budgetary allocations? Is the budget review by the governing board limited to matters of broad policy and not details? Are the forms for budget preparation prepared in the business office? Are all members of the administrative and teaching staffs kept informed as to the financial status of the institution?

Describe in detail any control which a State or local governmental agency has over the financial affairs of the institution after the funds have been appropriated. Are the appropriations lump sum or line item? Do State or local government personnel policies apply to institutional personnel? Evaluate and point out any strengths as well as weaknesses concerning external control.

Does the accounting system follow the generally accepted principles of institutional accounting as specified by the Controller of the State Board of Education? Is there an annual financial report? Are periodic written financial reports presented to the president and to the governing board? Is an annual audit made by independent competent accountants or agencies? Is there a well organized program of internal audit and control?

Are there suitable organization and adequate procedures for the management of all funds belonging to or owed to the institution? Is there centralized cashiering? Is there a carefully worked out system for the receipt, deposit, and safeguarding of institutional funds? Are all persons handling institutional funds bonded?

Describe and evaluate the purchasing procedures. Describe and evaluate the

procedure for the control of storerooms such as those for physical plant supplies, library supplies and office supplies.

To assist other committees in the self-study, chart the growth in investment in physical plant for the past three years.

Describe plans which have been made for guided development of the financial resources. These plans should include specific projections of income from each source, projections of expenditures in the major categories, and plans for the increase of capital resources. Such plans and projections should be related to projections or recommendations made by other committees in the self-study.

V. FACULTY

Describe the procedure for recruitment and appointment of faculty. How and by whom are candidates sought and appointed? Discuss the qualifications required of instructors for trade, technical, and collegiate levels, emphasizing academic training, practical experience, and teaching experience. Are the qualifications and procedures for the appointment of full-time and part-time faculty members the same? Project the needs for faculty in the next five years and the necessary salaries to attract and hold a faculty that is competent to carry out the institutional objectives. Does the institution expect to have the resources in the years ahead to meet these needs?

Discuss the organization of the faculty. Is this organization adequate to conduct the business of the faculty and provide two-way channels of communication among the various faculty groups and between the faculty and administration? Are the responsibilities and jurisdiction of the faculty clearly defined and understood by the governing board, the administration, and the faculty? Is there evidence that the faculty accepts these areas of jursidiction and is actively discharging its responsibilities? Are changes in organization needed now and in the future as the institution develops?

Prepare an analysis of the faculty, including earned degrees and specialized training, experience, age, length of service at the institution, professional activity, and evidence of instructional effectiveness.

What encouragement and financial assistance is the institution giving to members of the faculty to continue their professional development and graduate study? What evidence is available to show continuing professional growth of the faculty? Are members of the faculty encouraged and assisted financially to attend the meetings of professional organizations? Are leaves of absence granted for study? Is faculty strength evenly distributed among departments or are there obvious weaknesses? What plans are there for remedying these? Are the training

and competence of the faculty adequate to achieve the purpose of the institution?

Discuss in detail faculty salaries. What fringe benefits such as insurance, retirement, local supplement, and housing are provided? A chronological history of faculty salaries and fringe benefits should be developed. What trends are revealed, and what does this indicate for the future? Describe the policies governing promotions and individual increases in salary. How does the total financial compensation of the faculty compare with that in the institutions with a similar purpose? Does this comparison give reasonable assurance that the institution can maintain a faculty of the quality it needs?

What is the policy governing tenure? Is this clearly understood by the faculty and the governing board? Is it published? Describe the procedure and the governing board? Is it published? Describe the procedure followed in dismissing faculty under tenure. How many such dismissals have been made in the last five years? What recourse does the faculty have? What statement or statements of academic freedom have been adopted by the governing board? What problems have arisen in this area? Does the faculty feel that the policy is satisfactory? What evidence is there that the faculty has studied and accepted the professional and ethical responsibilities that accompany academic freedom?

What is the normal teaching load and on what basis are exceptions made? Is the policy the same in all units of the institution? Are teaching loads calculated on the basis of the number of credit hours taught, the number of contact hours, the type and level of instruction, the number of students or a combination of two or more of these factors? Is the number of different preparations considered? Are laboratory or shop class preparations considered? Are the duties of department heads taken into consideration in assigning teaching loads? What weight is given to other assigned duties? How are night assignments and extra loads handled? What weight is given to committee assignments and the directing of independent study? What policies govern the outside employment of faculty as consultants, lecturers, etc? What goals has the institution set for teaching

loads in the future, and what steps are being taken to achieve these?

What recognition is given for competence in teaching? What steps are taken to acquaint new instructors with the institution and the nature of their assignment? What provisions are made for in-service training programs and/or workshops? What provisions are made for supervised internships of new instructors and guided supervision of all instructors?

In evaluating faculty members, what criteria are used? Are these understood and accepted by the faculty? How are these applied and by whom? What evidence is there to show that the institution is seriously and actively concerned with improving the over-all effectiveness of the faculty? Do faculty offices, classrooms, general working conditions, and faculty morale reflect this concern?

VI. LIBRARY

Describe the philosophy of the library and its role, function, and services in relation to the total school philosophy. To what extent do library policies reflect and implement the philosophies of the library and the school? By whom are these policies determined?

Describe the library staff, its organization, the training and experience of each member. Is each professional staff member accorded the status appropriate to his qualifications and positions? How does the library staff participate in curriculum development and faculty planning, so that anticipated instructional needs may be met? Does the faculty and administrative evaluation of the library staff show that it is efficient and effective? List and evaluate all responsibilities of the library beyond the receiving and distributing of library books and periodicals, such as audiovisual, television, programmed instruction or library orientation activities. Describe the library advisory committee and list its duties, organization, and membership. Does it represent all curricula, including trade, vocational-technical, academic and other "specialized education?"

How does the book, periodical, and non-book materials collection reflect, support, and stimulate the purpose and educational tasks of the institution? What is the faculty and student evaluation of the library, including its strengths, needs, services, and holding? Describe the procedure used by faculty for requesting materials. Describe the procedures used by the librarians for acquisitioning and updating materials and for discarding holdings.

How adequately does the library aid teachers, students, and administration in selecting, producing and using materials and associated equipment effectively? To what extent are faculty, students, and administration kept informed of materials and services of the library? How does the library cooperate with existing libraries to provide community-wide services?

Describe the basis on which funds are allocated for the basic book collection,

periodicals, general references, special collections, and non-book materials. Are all phases of instruction covered, including trade, technical and academic, and other "specialized education?" Chart library expenditures for the past several years. Project anticipated expenditures for the next ten years in terms of possible increases or decreases in the courses of study, changes in faculty, changes in enrollment, and changes in library service. What percentage of the educational and general budgets has been allocated to library expenditures in the last three years?

What is the evaluation of faculty, administration, and librarians of the faculty and student use of the library? What is the evaluation of members of the library staff of their effectiveness, their weaknesses, and the further contributions they may make to the educational program? Has any recent study been made of the circulation of materials in the library to show changes or trends in usage.

Describe the adequacy of all library facilities in terms of relationship between space and function. If the institution has library services or resource materials handled in other departments, comment on their control, their quality, and their services.

Describe plans for improvement and modification of existing services and expansion of services in the light of anticipated growth. What provisions are made for incorporating innovations in future library functions and expansion.

VII. STUDENT PERSONNEL

Discuss in detail the procedure for admission. Is the same procedure required of all students? How are exceptions to policy made? In general, what exceptions have been made in recent years, and how have the students fared who were admitted under these conditions? Describe any policies governing early admission or advanced standing for freshmen and evaluate the success or failure of these. If studies have been made to correlate secondary school grades and entrance test scores with institution grades, how have the results of these been used?

Describe and evaluate the orientation program for new students at all levels. What procedures are followed to provide continuing guidance and counseling---academic and vocational?

What are the objectives of the student personnel program, and how are these related to the purpose of the institution? Describe the organizational framework for the administration and coordination of the student personnel program. Is this staff adequate to provide the necessary services to each student? What emphasis does the institution place upon a continuing concern for the total welfare of each student? How is this emphasis reflected in the administrative organization for personnel work, the financial support for regular and special services, and physical facilities, special services and student activities? It is recognized, of course, that the organization and obligation of the student personnel program will vary according to the nature of the institution and the composition of the student body.

Describe in general terms the types of information available concerning each student at the time of entrance, such as scholastic records, medical reports, personal recommendations, test scores, educational background, job experience, physical characteristics, and desired program.

Describe the testing program of the institution and outline the types of

information, in addition to the academic records, which are assembled on each student at various stages in his career. Where are these various records kept? How are they collated or coordinated for use in counseling and guidance?

Review and evaluate the institution's method of keeping records, of protecting records, and coordinating the use of records between offices. What changes in record keeping and use of records are suggested as a result of this evaluation?

What is the purpose of the orientation program, and how effective is the current program in fulfilling this purpose? Have the students and faculty been consulted in this evaluation, and if so, what recommendations have they made for improvements?

Describe and evaluate the counseling system and guidance services. To what extent are counseling and guidance provided for educational, vocational, personal, social, religious needs, and student housing? Does the institution have an in-service training program for faculty members who are used in counseling and guidance? How is the over-all program coordinated?

Describe the provisions for health services, medical care, and safety. Are they adequate for present and future needs? Explain the coordination between this area and the counseling and guidance system.

What are the institution's policies with regard to employment of students while attending the institution? Are there regulations which control the time spent in such employment?

Describe the administrative organization in effect for extracurricular activities, showing in each area the extent of faculty supervision or sponsorship and specific personnel in charge of the total extracurricular program and of each phase of this program. Are students and faculty satisfied with this organization?

Are there academic restrictions or minimums of achievement required for participation in extracurricular activities? If so, describe.

What control does the institution or the faculty exercise over social organizations? Is it possible for student organizations and clubs to be organized and to function without the knowledge and approval of the institution?

Evaluate the existing social organizations and extracurricular activities in terms of satisfying the needs of the students.

Are there any student organizations which are not in accord with the purposes and objectives of the institution? What steps may be taken to eliminate unnecessary or undesirable organizations?

If student government exists, outline the organization, showing all representation held by groups on the campus and faculty and administrative supervision or sponsorship. Describe the powers of student government. How effective is it with the students? Is it accepted and supported by the faculty and administration?

Describe and evaluate the facilities for and the supervision of student housing and food services.

Describe the organization of and faculty participation in the scholarship and loan programs. Does the program satisfy the needs and purposes of the school? Chart the growth or changes in the scholarship and loan program and project the needs and changes in the program. Show the sources of scholarship funds, such as gifts, endowment.

Evaluate the student employment and graduate placement offices in cost, organization, effectiveness, and follow-up of graduates and how it reflects the purpose of the institution.

Describe any research projects undertaken by the institution or by individual faculty or staff members, concerning the student personnel program or using student personnel data in examining related problems. Have any studies been made to determine the characteristics of the student body?

Do students or student committees participate in the formulating of institutional policy decisions or in suggesting changes or modifications? If so, what are the procedures?

What plans have been developed to enable the student personnel program to meet anticipated changes in the nature and size of the student body and the educational program?

Is there an adequate budget for the alumni program and how is it financed? Are the headquarters and facilities for alumni work in keeping with the job to be done? Is there an adequate and competent staff, and is effective liaison maintained with the offices of public relations and fund raising? Is effective liaison maintained with the total college program and are the alumni kept informed of the total college program?

Are special seminars organized and maintained for alumni? What is the nature of the programs at these seminars? Describe any other special features of the alumni program.

Is there an annual giving program? To what extent have the alumni contributed to this or similar programs, or special fund drives, during the past few years?

What changes are indicated as appropriate for a more effective alumni program and for more effective participation of alumni in the constructive improvement of the institution?

Describe the procedures used in student procurement. Describe the procedures used in the registration of students.

To what extent does the student personnel office participate in the planning and execution of commencement activities?

VIII. PHYSICAL PLANT -- SITE, BUILDINGS AND EQUIPMENT

The physical facilities should be studied in relation to the total program of the institution. In what ways have the size of the student body, housing needs, scope of the educational program, and institutional and community services influenced the development of the master plan of the campus?

What appraisal has been made of the age, general condition, needed renovations, and adaptability for present use of the building(s)? What restrictions on the institution's present program are due to the lack of physical facilities? What efforts have been made to overcome or eliminate these restrictions? What space utilization studies have been made? Upon what studies were any present plans for the renovation, remodeling, or expansion of facilities determined? What provisions have been made for the prevention of fire and the elimination of safety hazards for plant and site? What provisions have been made for storage of volatile chemicals or other hazardous items? What provisions are provided for removal of hazardous fumes? Is adequate provision made for year-round, thermo-control of the plant? Is the physical plant adequate to facilitate the institution's purposes and programs?

Is there an adequate master campus development plan? Is the plan being implemented? Does the campus development plan provide for zoning of campus into quiet and noisy areas and zoning in such a way that the campus meets both useful and aesthetic criteria? Is there an adequate landscaping plan? How is the plan being implemented? Is the site easily accessible to the students of the area? Is there sufficient area available for expansion? Is there sufficient space for student and faculty parking? Is the parking space adequately paved and marked and well lighted? Is the traffic on the campus controlled? Are adequate provisions made for the safety of pedestrians on the campus? Are there safety hazards in entering or leaving main highways adjoining the campus? Are there recreational facilities available? Are utilities (such as water, sewage,

electricity, and heat) adequate for existing building or buildings? Did the initial plan provide for the expansion of utilities in terms of the projected needs of the institution?

Is existing equipment adequate to effectively carry on high quality instruction? If not, what inadequacies exist in equipment? How has the equipment been selected? What plan exists for maintenance and inventory of the equipment? What plan exists for requisition of new equipment? What plan exists for replacement of obsolete equipment? What plan exists for identification of hazardous equipment? What equipment is on hand which is not used effectively or economically? What provisions are provided for reporting of unneeded equipment? Is adequate storage for various types of equipment provided? What insurance coverage is provided on the plant and equipment?

Delineate the responsibilities for the maintenance and housekeeping program of building and grounds? What in-service programs are provided for this staff? Do studies of costs of labor, supplies and materials show efficiency of operation, or do they possibly show a disproportionate amount of the budget utilized for these purposes in comparison with the available data from other similar institutions? What are the future projections of costs and staff for this program? What is the opinion of the staff and student body as to the adequacy of the present program of maintenance and housekeeping?

APPENDICES I - II - III

INTRODUCTION

Appendices I, II, and III (pages i-iii) are forms for reporting enrollment, faculty, and library information. It is expected that all institutions completing a self-study will fill in these forms to be held for examination by the visiting committee. Immediately after the committee visit, the completed report forms should be forwarded to the Department of Community Colleges.

Institutions seeking accreditation by the Southern Association of Colleges and Schools will complete additional forms, dealing with Standard Four - Financial Resources, as found in Appendix II, Manual for the Institutional Self-Study and Periodic Visitation Program, Commission on Colleges, Southern Association of Colleges and Schools, Atlanta, Georgia, 1963.

ENROLLMENT INFORMATION FOR _____ (YEAR)

Name of Institution _____

I. The institution operates on the semester ____ quarter ____ system. (Check one.)

II. Computing Enrollment:

Give the equivalent full-time enrollment at the close of registration for the fall semester or quarter. In the case of extension students, give the FTE enrollment at the close of the fall quarter or first semester.

A. Full-Time Students:

Total the number of students carrying a load of twelve or more credit hours.

College Parallel _____

Technical _____

Vocational _____

B. Part-Time Students:

Total the loads of part-time students and divide this total by twelve credit hours.

College Parallel _____

Technical _____

Vocational _____

C. Extension Students:
(Include General Adult)

This is the sum total of all contact hour enrollments for the fall quarter divided by 176. This is based upon an average student contact hour load of 16 hours per week. _____

Standard Five - FACULTY

Academic Preparation of Faculty

Community Colleges, Technical Institutes, and Industrial Education Centers

(Faculty statistics should be reported for the fall semester or quarter.)

Name of Institution _____

I. Full-Time Teaching Faculty

A. What is considered to be a full teaching load in credit hours at the institution? _____

B. Total number of full-time teaching faculty. _____

C. Number with three or more years of graduate training. _____

D. Number with two but less than three years of graduate training. _____

E. Number with master's degree but less than two years of graduate training. _____

F. Number with less than a master's degree. (Attach for each case evidence of professional competency in the area of specialization.) _____

G. Number with less than the bachelor's degree. (Attach for each case evidence of professional competency in the area of specialization.) _____

II. Part-Time Faculty and Administrators Who Teach

	Years of Graduate or Specialized Training	No. Employed on Half-Time Basis	No. on Less than Half-Time
A.	Three or more years		
B.	Two but less than three years		
C.	Master's degree but less than two years		
D.	Less than master's degree		
E.	Less than bachelor's degree		

III. List by name all faculty members who are not teaching in their field of specialization.

Standard Six - LIBRARY

I. Personnel

A. Number of librarians holding graduate library degrees _____

B. Number of non-professional personnel _____

II. Operating Expenditures

A. Salaries _____

B. Wages _____

C. Books _____

D. Periodicals _____

E. Binding _____

F. Special services or materials such as audio-visual aids _____

G. Other (excluding capital outlay) _____

H. Total operating expenditures _____

III. Seating Capacity

A. Number of seating spaces in the library(ies) _____

B. Largest number of students on campus at one time during the class day _____

VT 001 899
Agricultural File Index.

South Carolina State Dept. of Education, Columbia. Vocational Agriculture
Clemson Univ., S.C. Dept. of Agricultural Education
MF AVAILABLE IN VT-ERIC SET.
Pub Date - 65 70p.

*VOCATIONAL AGRICULTURE; *INFORMATION STORAGE; *INDEXING; *GUIDES

The purpose of this document is to provide vocational agriculture teachers with an explanation of and material for a statewide system of departmental filing procedures. The ten basic index areas are: (1) Administration, (2) Future Farmers of America, (3) General Agriculture, (4) Animal Science and Production, (5) Plant Science and Soils, (6) Field Crops, (7) Horticulture, (8) Agricultural Economics, (9) Agricultural Engineering, and (10) Conservation. The system is basically numerical but area divisions also involve an alphabetical arrangement. Further subdivision and expansion are accomodated. Filing dividers and file-folder gummed labels are provided to supplement the document and illustrate the arrangement of files. (JM)

USING THE AGRICULTURAL FILE INDEX

The index has ten basic areas. They are:

		Ten of our eleven teaching units in agriculture fit directly into this index as follows:
000	Administration	
100	FFA	Leadership Training
200	General Agriculture	Importance of Agriculture
300	Animal Science and Production	Animal Science, Animal Production
400	Plant Science and Soils	Plant Science and Soils
500	Field Crops	Crop Production
600	Horticulture	Farm Home and Family
700	Agricultural Economics	Farm Management
800	Agricultural Engineering	Farm Mechanics
900	Conservation	Conservation of our Natural Resources

The system is numerical. Within each area, an alphabetical arrangement is also applied. Thus it is possible to employ either the alphabetical or numerical principle to this filing system.

Each major area covers the range of 100 points. For example Field Crops falls in the 500 range, or everything from 500 to 599 is assigned to Field Crops. This 100 point system is divided into twenty sub-areas each carrying a number assigned on the five point basis. Thus 500 is Field Crops - General. (This is one of two violations to the alphabetical system within areas. General is always the first sub-area, Miscellaneous, when used, is the last sub-area defined.) In the case of Field Crops, 505 is open and may be used for future expansion. The number 510 is assigned to Corn, 515 to Cotton. The numbers between 510 and 515 have not been used. If future expansion were needed, these numbers could be used.

Within each sub-area there is room for a further breakdown based on divisions by multiples of ten. Thus 515 is Cotton - General, 515/10 is Cotton - Disease, Insect and Pest Control, 515/20 is Cotton - Growing, etc. Again the numbers between /10 and /20 could be used for future expansion. In many cases some of the numbers of this ten division unit are not assigned. This also allows you to develop the system along your local needs.

You need not develop the entire index at once. You might start with the ten areas, and the twenty sub-areas within each area. As you find your materials file increasing, you can add your third breakdown. This system can also be used for filing your bulletins. An extra set of printed labels is included for your bulletin boxes or bulletin file. These labels are identical to the area and sub-area labels. Thus your bulletins would be filed in a manner identical to your personal materials file. Bulletins can thus be numbered with this file code and thus easily returned to their proper filing place.

Evaluative Criteria for Vocational Agriculture Programs.

West Virginia State Dept. of Education, Charleston. Bureau of Vocational, Technical, and Adult Education
MF AVAILABLE IN VT-ERIC SET.
Pub Date - Apr65 12p.

*VOCATIONAL AGRICULTURE; *PROGRAM EVALUATION; *EVALUATION CRITERIA; *EDUCATIONAL OBJECTIVES; SELF EVALUATION; *RATING SCALES

Based upon vocational agriculture program objectives, this formal evaluative instrument is designed for use in self appraisal by teachers or for identification of strengths and weakness by administrators, advisory committees, and state staffs. The instrument includes separate pages for eight major program segments: (1) Organization, (2) Nature of Offerings, (3) Physical Facilities, (3) Instructional Staff, (5) Instructional Activities, (6) Instructional Materials, (7) Method of Evaluation, and (8) Outcomes. Space is provided for the recording of special characteristics and a summary of evaluation. Specific procedures for use of the instrument are described. (JM)

Using Evaluation to Improve Programs of Vocational Agriculture

Evaluation of vocational agriculture programs takes place continuously. Students, parents, school administrators, fellow teachers, young and adult farmer class members and many others in the community are continuously appraising various aspects of local programs. As long as the public schools belong to the public, we should welcome this informal evaluation. Too often informal evaluation is made with insufficient understanding of the program objectives.

This publication is a formal evaluative instrument based on program objectives. It can effectively be used for "self appraisal" of a program by the teacher or be used by administrators, advisory committees, state staff, or a combination of these, to determine program strengths and weaknesses for the purpose of program improvement. This evaluation should be used to help others understand your program and to help in planning the best possible program of vocational agriculture for your school and community.

Procedure to follow in using Evaluative Criteria

This instrument includes a separate page for the eight major segments of a vocational agriculture program. Each of the segments should be considered individually as follows:

1. Read carefully the "Guiding Principle" which states the general purpose and some desirable characteristics of this phase of the program.

2. Give a rating in the "Evaluation" for each of the items listed: (Place an X in the appropriate column)

   5. Excellent - the provisions or conditions are extensive and are functioning excellently.
   4. Very Good -
      a. the provisions or conditions are extensive and are functioning well, or
      b. the provisions or conditions are moderately extensive but are functioning excellently.
   3. Good - the provisions or conditions are moderately extensive and are functioning well.
   2. Fair -
      a. the provisions or conditions are moderately extensive but are functioning poorly, or
      b. the provisions or conditions are limited in extent but are functioning well.
   1. Poor - the provisions or conditions are limited in extent and functioning well.
   0. Does not apply.

3. List the information in the section "Supplementary Data".

4. Study the rating in the "Evaluation" and the information recorded as "Supplementary Data" and assign a rating by placing a dot (.) in the appropriate column of the eight segments in the "Summary of Evaluation" on page 11.

I ORGANIZATION

Guiding Principle: The local program of vocational agriculture should meet the educational needs in agriculture of the local community and should be based upon and evaluated in terms of clearly stated objectives. Continuing community study and involvement of those affected by the program under the leadership of the teacher, are essential and should result in a written long-term department program.

Evaluation

5	4	3	2	1	0	
						a. Instruction in vocational agriculture is available to the youth in the community who are interested in or concerned with agriculture and to adults now employed or desirous of entering an agricultural occupation.
						b. Opportunities are provided for prospective vocational agriculture students to receive a clear understanding of purposes and nature of the program before enrollment.
						c. The department offers an instructional program for young and adult farmers in the community.
						d. An advisory group assists the teacher in planning and developing the program.
						e. Classroom instruction and supervised experience programs are closely integrated and based on students' abilities, needs and opportunities.
						f. The teacher is allotted sufficient time to provide group and individual instruction for high school students, young farmers and adults, including their occupational experience programs.
						g. Future Farmers of America activities are available to extend learning in both the classroom and supervised experience phases of the high school program.
						h. Supervised experience programs are sufficient to provide the student with needed experiences leading toward employment in an agricultural occupation.

Supplementary Data

	Current	Two Years Ago	Five Years Ago
a. Enrollment: High School:	_____	_____	_____
Young Farmer:	_____	_____	_____
Adult Courses:	_____	_____	_____
b. Per cent high school Vo-Ag enrollment in FFA	_____	_____	_____
c. Amount of school time available for supervision	_____	_____	_____
d. Number non Vo-Ag classes taught	_____	_____	_____
e. Average number supervisory visits to students	_____	_____	_____
f. Average labor income per student	_____	_____	_____
g. Per cent of students having an occupational objective in agriculture	_____	_____	_____

(After this section has been completed, assign a rating of this section on page 11)

II NATURE OF OFFERINGS

Guiding Principle: The instructional program is such that a variety and quality of offerings and experiences are provided which are sufficient to prepare students for entrance into agricultural occupations in accordance with their occupational objective.

Evaluation

5	4	3	2	1	0	
						a. Curriculum is based upon an analysis of student needs and of the agricultural opportunities in the community.
						b. Experiences in both farm and non-farm agriculture are provided in accordance with students' objective.
						c. Program provides a solid base of skills, knowledge and competencies which contribute to success in agriculture.
						d. Curriculum provides a knowledge and understanding of animal science.
						e. Curriculum provides a knowledge and understanding of plant science.
						f. Curriculum provides a knowledge and understanding of soil science.
						g. Curriculum provides a knowledge and understanding of agricultural business management.
						h. Provides skills, knowledge, experiences and competencies in farm shop, farm electrification, farm structures, farm power and machinery, and soil and water management.
						i. Program provides those experiences necessary to develop effective leadership.
						j. Each student enrolled in a pre-employment course has an occupational experience program which is educational, challenging and profitable.

Supplementary Data

a. Per cent of instruction directly related to supervised experience programs _____
b. Total number field trips taken annually _____
c. Per cent members serving on FFA committees _____
d. Number FFA meetings held annually _____
e. Approximate percentage of time devoted to agricultural mechanics as compared to agricultural science _____

(After this section has been completed, assign a rating of this section on page 11)

III PHYSICAL FACILITIES

Guiding Principle: Adequate physical facilities for teaching vocational agriculture should be available and the teacher should efficiently and effectively utilize these facilities to provide for the needs of the students.

Evaluation

5	4	3	2	1	0	
						a. Instructional space is sufficient for the variety of classroom, library, laboratory and agricultural mechanics activities required by the program.
						b. The agricultural mechanics shop adjoins or is near the classroom.
						c. Office area and office equipment are provided for consultation and administration.
						d. Audio-visual equipment is available including room darkening devices.
						e. Duplicating equipment, computation machines and telephone are accessible.
						f. Classroom is adequately equipped to carry out a desirable instructional program.
						g. Shop is adequately equipped to carry out an instructional program in the five areas of agricultural mechanics.
						h. Adequate washing facilities are available.
						i. Adequate storage facilities are available for the classroom and shop.
						j. Safety equipment such as first-aid supplies, fire extinguishers and a fire blanket are available.
						k. There is adequate lighting in relation to work requirements.
						l. There is adequate ventilation with special provision for forging and welding areas.

Supplementary Data

a. Major improvements in classroom facilities during the preceding year:

_____

_____

b. Major improvements in agricultural mechanics facilities during the preceding year: _____

_____

c. Date of inventory of department facilities _____

d. Average annual departmental expenditures: expendable supplies _____

_____ tools and equipment _____

e. A written list of needed improvements in physical facilities is kept current: Date last submitted to administrator: _____

(After this section has been completed, assign a rating of this section on page 11)

IV INSTRUCTIONAL STAFF

Guiding Principle: Teachers of vocational agriculture should have an agricultural background and occupational experiences in their special field, hold a valid teaching certificate and have partaken of current in-service education to maintain and enhance competency.

Evaluation

5	4	3	2	1	0	
						The vocational agriculture teacher should have:
						a. had practical agricultural experience in his area of specialty.
						b. adequate preparation in biological, physical and earth sciences.
						c. adequate preparation in animal, plant and soil sciences.
						d. preparation and experiences in rural social sciences - agricultural economics, farm management and rural sociology.
						e. developed and demonstrated skills, knowledge and competencies sufficient to teach agricultural mechanics.
						f. extensive preparation in general and professional education.
						g. had experience in conducting Future Farmers of America activities and working with agricultural groups.
						h. active participation in in-service education through formal study and other professional activity.
						i. active interest in professional advancement, including participation in educational organizations.
						j. made a contribution to the profession by preparing articles for professional publications.

Supplementary Data

a. Educational attainment of Vo-Ag teacher: B.S. _____, number hours beyond B.S. _____, M.S. _____, Number hours beyond M.S. _____.

b. Credit courses taken last three years _____

_____ _____ _____

c. In-service, non credit workshops attended within last three years

_____ _____ _____

d. Professional organizations to which belong _____

_____ _____ _____

e. Articles published in professional publications: _____

_____

(After this section has been completed, assign a rating of this section on page 11)

V INSTRUCTIONAL ACTIVITIES

Guiding Principle: The instructional activities should bring about thinking and understanding, be based on sound objectives and planned on a long time basis to assure development of knowledge, skills and competencies necessary for agricultural occupations.

Evaluation

5	4	3	2	1	0	
						a. Instruction for the high school, young farmer and adult groups is directed toward clearly formulated objectives that are appropriate for the particular group.
						b. Evidence is available of careful planning and scheduling for both class instruction and applied activities.
						c. Instruction is provided during each month of the year.
						d. Students are provided an opportunity to participate in planning their activities within the framework of established activities.
						e. Instruction is related to agricultural experiences of students.
						f. Opportunities are provided for a variety of experimental and testing activities.
						g. Field trips, demonstrations and other instructional methods are used appropriately.
						h. Instruction is correlated with other subject matter areas in the students' educational program.
						i. Students are enhancing and making substantial change in their occupational experiences as a result of the instructional program.

Supplementary Data

a. Average number different teaching methods used each day _____

b. Hours of time each week spent in planning for teaching _____

c. Date of preparation of course of instruction _____

d. Are all classes following a written, posted course of instruction?

Yes _____ No _____

(After this section has been completed, assign a rating of this section on page 11)

VI INSTRUCTIONAL MATERIALS

Guiding Principle: Instructional materials should be available in sufficient quality and variety and used effectively and efficiently to assure a quality instructional program.

Evaluation

5	4	3	2	1	0	
						a. Current reference books are available in a wide range of agricultural areas.
						b. Current reference bulletins are available in sufficient quantity and variety.
						c. Periodicals and commercial literature are available to students.
						d. Teaching units, resource units and study guides are available and used by the teacher.
						e. Farm planning, budgeting, record keeping and analysis materials are available for instructional use.
						f. Adequate chalk and bulletin boards are available.
						g. A variety of suitable specimens and exhibit material is available.
						h. Instructional materials are organized efficiently and used effectively.
						i. There is a plan for replacing and supplementing instructional materials periodically.
						j. Audio and visual aids to instruction are available and effectively used.

Supplementary Data

a. Number of reference books less than ten years old _____

b. Additions to reference library past year: books _____ bulletins _____

c. Audio-visual equipment available and used in instructional program (check)

Motion picture projector	_____	Chart making equipment	_____
Slide & film strip projector	_____	Flannel boards	_____
Opaque projector	_____	Tape recorder	_____
Overhead projector	_____	Record player	_____
		Camera	_____

(After this section has been completed, assign a rating of this section on page 11)

VII METHOD OF EVALUATION

Guiding Principle: Evaluation should be a continuous process including all aspects of the program such as student progress and accomplishments, instructional program, facilities, students' supervised occupational programs, young farmer and adult programs and outcomes in terms of program objectives.

Evaluation

5	4	3	2	1	0	
						a. Evaluation is an integral part of instruction.
						b. Evaluation places emphasis upon the growth of the individual toward appropriate objectives.
						c. Agricultural mechanics activities are evaluated in terms of the nature of the job and standards of workmanship.
						d. Results of evaluation are used in determining the appropriateness of objectives and in planning further instruction.
						e. Class members participate in the evaluation of their own achievement.
						f. Records of supervised occupational experience programs are sufficient for evaluation.
						g. Follow-up data are used in planning and revising the curriculum.
						h. Examinations are used for both diagnosis and evaluation.
						i. An advisory group assists in evaluating total program.

Supplementary Data

a. Average number tests given each class during a year period _____

b. Follow-up records are organized and kept current Yes_____ No _____

c. List media used in evaluating effectiveness of total program:

_____ _____

_____ _____

(After this section has been completed, assign a rating of this section on page 11)

VIII OUTCOMES

Guiding Principle: Program outcomes should be identifiable in terms of fulfillment of program objectives.

Evaluation

5	4	3	2	1	0	
						a. A high percentage of graduates enter the occupation for which they were trained.
						b. Pre-employment students have a vocational objective in agriculture.
						c. Students are participating in supervised experience programs appropriate to their objective.
						d. Student farming programs are profitable, educational and challenging.
						e. Students have participated in experiences and activities that prepare for leadership.
						f. Students are adequately prepared for successful entrance in an agricultural occupation.
						g. The instructional program provides adequate information for career selection.
						h. Public has been well informed relative to the objectives, activities and accomplishments of vocational agriculture and the FFA.

Supplementary Data

a. Per cent of graduates entering an agricultural occupation:

Full-time farming _____ Non-farm agricultural occupation _____
Part-time farming _____ Agriculture college _____

b. Per cent attendance in young farmer and adult classes _____

c. Number radio programs presented past 12 months _____

d. Number TV programs presented past 12 months _____

e. Number newspaper articles published past 12 months _____

f. Number public programs presented which would acquaint public with vocational agriculture in past 12 months _____

(After this section has been completed, assign a rating of this section on page 11)

IX SPECIAL CHARACTERISTICS

A. List the most satisfactory and commendable phases of the program

B. List the phases of the program which are the least satisfactory and in greatest need of improvement

SUMMARY OF EVALUATION

Considering all the evidence listed in each of the eight major sections, evaluate the department in terms of fulfillment of the objectives inherent in the guiding principle listed at the beginning of each section. After recording rating on the scale, draw a heavy line connecting each point.

	Excellent	Very Good	Good	Fair	Poor

Definition and Purpose

Industrial Arts is the study of our technology, including industrial tools, materials, processes, products, occupations and related problems. It involves activities conducted in shops, laboratories, drafting rooms and elementary school classrooms.

The unique contributions of Industrial Arts are:

1. To provide experiences in a variety of industrial activities for guidance and informational purposes.
2. To discover and develop interests and capabilities of students in technical and industrial fields.
3. To develop technical problem-solving skills related to industrial materials and elements of fabrication.
4. To develop skill in the safe use of hand tools and machines common to industry.
5. To understand, make and use working drawings, the language of industry, as applied to industrial arts activities.

Industrial Arts helps children and adults understand the importance, place and purpose of industry in our culture. Properly organized, it can meet the needs of several types of students: those with an interest in science, who are able to do research and develop principles; those inclined towards engineering, who are able to translate principles into something useful; those with technical aptitude, who are able to perform techniques with excellence and finish work to high standards; those who are interested simply in learning something about our man-made physical world; those who will earn a living at some simple repetitive industrial or service job, and those who are likely to drop out of school before graduation.

In addition, it offers students a practical foundation for several curriculum areas including:

1. High school vocational and technical education.
2. College engineering and technical fields.
3. College social sciences as related to industry.
4. College industrial and architectural graphics.
5. College science and general studies.

Description

Industrial Arts provides an orientation to the industrial aspects of our culture. It is an instructional program designed to prepare the learner to understand and participate in a democratic industrial society. It contributes to the attainment of individual as well as social needs.

Students enrolled in industrial arts programs are involved directly in meaningful learning experiences through class, individual and group projects. These activities synthesize various aspects of industrial life. Students learn about the occupations of industry, types of activities engaged in by the workers, the preparation required for employment and future opportunities available to the employees. They learn facts, principles and procedures about industrial tools, materials, processes, mechanics and design. Experiences with tools and materials representing a wide range of industries such as ceramics, metals, paper, plastics, textiles and woods are included in the curriculum. Other items include a study of electricity and electronics, motors, engines, structures, and so forth, of concern to people at home, in industry, on the farm and in leisure time activities.

The program embraces such major activities as ceramics, drafting, electricity and electronics, graphic arts, metalworking, plastics, power mechanics, textiles and woodworking. Planning is included in all of these kinds of work. These major activities are all regarded as parts of a total program and not as separate areas of work unrelated to each other.

Industrial Arts is organized to facilitate meaningful and stimulating, problem-solving activities in shops and laboratories. These include experiences related to the functions of management, labor, research, development, planning, production and the servicing of industrial products. It also provides an educational climate for applied scientific knowledge, creative expression and the integration of other areas of education with Industrial Arts.

Where Found

Industrial Arts is found at all instructional levels from the kindergarten through college and adult

education. In Industrial Arts for the elementary grades pupils perform work with tools and materials closely integrated with their classroom studies. In the junior high school, Industrial Arts is concerned with surveying industrial materials, processes, organizations and problems in each of the basic areas mentioned below. In the senior high school depth is emphasized; also the development of technical skill and understanding and the application of problem-solving techniques in one or more of the basic subject areas. Industrial Arts usually is offered at the college level to prepare Industrial Arts teachers. Adult programs, built around industrial avocations and home maintenance and repair, are of value to the continuing education of citizens.

Basic Subject Areas

The basic subject areas of Industrial Arts are: ceramics, drafting, electricity and electronics, graphic arts, metalworking, plastics, power mechanics, textiles and woodworking. Work in one or several of these areas may be offered at the various levels mentioned before under the heading "Where Found." A realistic sampling of industrial materials, processes, organization, occupations and problems will require the presentation of each subject area on as broad a basis as possible.

Ceramics

Modern industrial practice has broadened the term "ceramics," generally associated with the raw material, clay, to include products made from nonmetallic, inorganic materials, usually requiring high temperatures in their manufacture. The production of such materials is the basis of a major industry receiving increased emphasis in the space age. Ceramic products are important in modern industry and for everyday living.

The industrial applications of ceramics should be emphasized in working with tools and materials in industrial arts shops, rather than creative expression stressed in fine art courses.

Typical activities in ceramics include work involving the following products: abrasives, cements, cermets, enamels, glass, refractories, structural clay products and white wares and materials for electrical components.

Drafting

Drafting, which consists of a system of signs and symbols, serves as a language or means of communication in industry. Through instruction in the manipulation of these signs and symbols students acquire the understanding and skills necessary to apply this language to Industrial Arts.

Drafting has three important functions. The first is to provide students with knowledge and drawing experience which will contribute to their general education. A knowledge of this important communication subject is necessary for all individuals living in our complex, industrialized society. The second function is to provide exploratory experience which will enable students to survey the field of drafting for a vocational choice. These exploratory experiences often include activities centered around such units as sketching, pictorial drawing, working drawing, electrical schematic drawing, architectural drawing, topographical drawing, graphs and charts and sheet metal pattern development. In addition, general and technical information is given appropriate consideration and application. The third function of drafting is to provide students with the skill necessary to plan, sketch, design and prepare working drawings for the projects they construct in Industrial Arts shops and laboratories.

Electricity and Electronics

Electricity and electronics are becoming increasingly important to our economy in national defense, industry, communications, medicine, space travel and in the home. It is desirable that all persons have some understanding of this important industry. This area of work can be divided into two major divisions, the first electricity and the second, electronics.

The first consists of a study of basic electrical principles with experiences involving the use of power sources, circuitry, load devices and switch gear. Emphasis is placed on an understanding of the technical principles involved in equipment operation, component construction and beginning servicing and maintenance skills. Learning activities include the development and use of: experimen-

tal panels, meaningful and challenging take-home projects, assembly-disassembly techniques, with emphasis on beginning maintenance and service skills and creative problem-solving jobs.

The second is concerned with the characteristics, properties and practical application of electrons in vacuum or gas filled tubes and in semiconductors. School experiences in electronics often are applied in the areas of communications including radio receivers and transmitters and television. Further work includes experiences and technical understanding in the areas of detection devices such as radar and sonar and in industrial applications including industrial controls (computers, motor controls and servo-mechanisms) and electronic measurement.

Graphic Arts

Printing is a basic means of communication in industry, agriculture, business, the professions and among individuals. Since the printing industry and its products are essential to our economy, it is important that pupils learn something about it.

The graphic arts are concerned with the use of tools, materials and processes related to printing and publishing. Major units of instruction embrace letterpress printing, lithography and gravure. Students participate in activities including: bookbinding, silk screen printing, linoleum block cutting, rubber stamp making, printing design, intaglio printing, papermaking, photography, plate making, stencil cutting and duplication.

Metalworking

Metals, as materials of construction, are vital to the development of our highly industrialized society. They are essential in industry, business, communications, transportation and national defense. An ever increasing demand for all types of metals, including new exotic alloys for our space and atomic technologies, underscores the importance of metalworking in Industrial Arts.

A wide range of basic processes are included in metalworking such as sheet metal forming, machining, welding, casting, forging, heat treating, fabricating and spinning. Opportunities for problem-solving are provided by a study of design, exact measurement, metallurgy and production techniques.

Plastics

Plastics, an important product of the chemical laboratory, is the basis of a rapidly expanding industry. It is manufactured in many different forms and chemical compositions applicable to numerous uses in national defense, industry, medicine and in the home.

Plastics includes a study and classifications of the major kinds of plastics—with work experience in the processes of fabricating, molding, casting, thermoforming, reinforcing and expanding. Also the design, construction and application of plastic forming dies and molds.

The study of plastics has its base in chemistry and provides an excellent media for research.

Power Mechanics

Power mechanics is the study of the sources of power such as atomic, solar, electrical, steam and combustible fuels and the machines that utilize the energy from these sources. Scientific principles underlying the development, control and use of power are emphasized in this subject—also the practical application of hydraulics and pneumatics.

Work experience is gained through operating, repairing and servicing the machines that use this power. These include diesel, gasoline, steam, jet and experimental engines—also electrical generators and motors. In addition devices used to transmit this power into work, such as transmissions and differentials, are studied.

The study of power mechanics involving principles, analysis, diagnosis and the application of these factors provides excellent opportunities for the development of problem-solving abilities.

Textiles

Fibers and fabrics are the basis for one of our largest industries producing goods used daily by almost everyone. In recent years the development of numerous man-made fibers has extended the use of textiles in science, in industry and in the home. Everyone should have some understanding of this important basic material.

Work in textiles involves activity in a number of processes including the following: fiber identification, processing fiber, dying fibers and fabrics,

printing and stenciling fabrics, designing, fabricating cloth, weaving, braiding, cable construction, rope making, knitting, rug manufacture, upholstering, caring for textile products and constructing textile equipment.

Textiles provides an excellent media for technical problem solving, designing and drafting for loom operation and clothing construction—also an opportunity for practical consumer education.

Woodworking

Wood, a universal, abundant and relatively inexhaustible raw material serves man in several ways: structurally; in the form of numerous byproducts, important to industry; and, esthetically, by the appeal of color, texture and grain markings. Since it is a material which may be used in its natural state, frequently it is one of the first materials used by young people in construction work at home or in the school.

Recent developments in woodworking and related technology make it a rich content area for studying industry today. Many adult activities are identified with the designing, shaping and fabrication of projects with parts constructed from wood.

This area in our nation's schools includes such typical activities as hand woodworking, machine woodworking, furniture construction, pattern making, boat building, home construction and wood finishing. Closely allied activities, such as model making, scenery construction and upholstery often are included in the program.

Courses emphasize creative design, forming and fabricating processes and an understanding of wood and the related technology.

Safety

Safety is an important phase of industrial arts education that should be taught continually throughout all courses. Each teacher should analyze the safety factors and hazards inherent in his program of instruction and develop a set of organized rules and lessons for presentation to the students throughout the course. Safety instructions related to specific tools, machines, equipment or materials should be presented as an integral part of a demonstration or lesson.

Levels

Elementary—Grades 1-6

Industrial Arts in the elementary grades consists of construction activities which are a part of the common learnings of elementary school children. The program helps children to become more creative, to understand abstract ideas and to appreciate their culture. The activities should be correlated closely with the basic units for elementary education, so that the results will be an integrated program of education. Usually the children work in the classroom under the direction of the elementary teacher using simple hand tools and common materials. Some schools provide a special room for work on individual or group projects which cannot be completed in the classroom. Specially trained consultants or resource teachers are employed to work with both the teachers and the pupils.

Junior High—Grades 7-9

Industrial Arts in the junior high school offers youth a variety of organized shop and laboratory experiences which help them identify and understand their interests, abilities, limitations and opportunities in our industrial society. It also helps them to understand our technology and the roles of the individual citizen as consumers and producers of industrial products and services. It provides practical experiences in using many tools, materials, processes and products of manufacturing as well as those of the crafts. Through such experiences students identify avocational and vocational interests and abilities. Consequently, they are better prepared to select special areas of study at the senior high school level.

The junior high school portion of the program should include opportunities for planning, experimenting and working in the major activities of ceramics, drafting, electricity, graphic arts, metalworking, plastics, power mechanics, textiles and woodworking. Industrial Arts at this level is essential to the basic education and guidance of all boys and girls.

Senior High—Grades 10-12

In the senior high school, Industrial Arts makes an important contribution to the total school edu-

cation program. In a modern industrial society, every student needs to develop an understanding of the functions, technology and occupational opportunities of industry. The Industrial Arts program provides this opportunity to study about industry, materials and fabrication procedures; methods of communication through drawing and graphic arts; and, the industrial and consumer use of finished products, such as electrical devices and how power is developed. Much of this knowledge and experience is unique to Industrial Arts and should be included in the education of all youth.

At the senior high school level, two approaches are possible. The first, a horizontal approach, enables a student to explore further additional kinds of work in which he may be interested. The second, a vertical approach, offers a student an opportunity to concentrate and specialize in a specific kind of work, such as metalworking, electricity, power mechanics or drafting. Thus, for some students, who do not attend college, Industrial Arts offers work of pre-vocational value.

Guidance is a most important function of Industrial Arts, especially in highlighting occupations for which students have a special interest and ability. Through a study of occupations the high school student may develop an understanding of the educational requirements and the roles of the scientist, designer, engineer, craftsman, technician, production worker and manager. The Industrial Arts teacher's professional background of education and practical experience qualifies him especially to offer guidance and counseling to industry-oriented students.

Finally, the senior high school program contributes to the educational objectives by helping the student understand the place and purpose of industry in society today—also his potential as a citizen and worker in this society.

College Level

Industrial Arts usually is offered in colleges to prepare Industrial Arts teachers. Programs to prepare teachers of Industrial Arts include three types of work—the basic academic courses required of college students, technical and shop courses in the

various areas and work in professional education. Graduates receive a bachelor's degree. Graduate study beyond the first degree leading to the master's and doctor's degrees usually consists of more professional courses, with emphasis on research.

Facilities and offerings are provided in many collegiate programs so students may elect courses or activities in Industrial Arts. College students derive creative expression from: constructing scenery and properties for dramatic productions, television and college activities; working in ceramics, jewelry and woodworking; developing and operating radio broadcasting equipment; and, in the construction of archery equipment, furniture, boats and the like.

Industrial arts courses also are offered as service courses to other departments such as occupational and manual arts therapy.

Adult Level

Increased industrialization and more leisure time have resulted in an expanding role for Indusrtial Arts at the adult level. Adult Industrial Arts classes often contribute to the development of pleasurable and worthwhile hobbies and supplementary income activities. As consumer products become more numerous and complex the program frequently contributes to the wise use and maintenance of these products. Adult Industrial Arts usually is maintained as an evening school program in secondary schools and colleges.

Acknowledgment

This is the third revision of an earlier statement, under a similar title, that was authorized by the Industrial Arts Policy and Planning Committee of the American Vocational Association, in 1956. The original manuscript was prepared by a sub-committee of the IAPPC consisting of G. Wesley Ketcham —Chairman, Kenneth Brown, Chris Groneman, James Hammond, John Hurley, Lynne Monroe and Walter R. Williams.

The statement was revised again in 1958 and 1960, under the auspices of the IAPPC, to bring it up to date. This third revision, requested by IAPPC, was made to update the statement to reflect changes in our technological society which have occurred

since the last revision—also to include the latest thinking of our national leaders in Industrial Arts Education.

The Editorial Committee has attempted to report what is believed to represent the common denominator for Industrial Arts in American education. It is recognized that the variations—from community to community and from state to state—in terminology, basic areas, emphasis and physical plants are inevitable, but desirable, in the democratic process. The goal was to report what would represent the collective thinking, to the greatest possible degree, of the Industrial Arts Policy and Planning Committee of the AVA. Special thanks are acknowledged to Arthur F. Ahr, Chief, Bureau of Industrial Arts Education, The State Education Department, Albany, New York, and also a member of IAPPC, for his kindness in serving as Chairman of the Revision Committee meeting at Milwaukee—also for his help in reviewing the manuscript.

introduction

This booklet has been prepared to help boys and girls under 18 years of age understand Ohio Minor Labor Laws. Two sections deal briefly with Federal Child Labor Laws and Careers in Apprenticeship.

The main portion of the book details the types of work you are permitted to do under Ohio law, the hours you may work, and the steps you should follow to help the employer comply with laws governing the employment of minors. These laws are written for the employer for the protection of the minor, but the employer needs your co-operation so that he will not be in violation.

Most of you teenagers realize the importance of advanced education today. You do not need to be told that specialized preparation is almost a must if you are to compete successfully in the job market. You know that persons who have not completed high school make up a far larger proportion of unemployment roles than do those who have graduated.

We would like to urge you to seek part-time or vacation jobs if you must work. Don't neglect your studies for any job, but learn all you can from the world of work. Character can be strengthened and a sense of responsibility increased by earning money regularly.

Whether you plan to work part-time – possibly to help insure a college education, are forced by circumstances to seek a full-time job, or wish to make a career of an apprenticeable trade, we hope this manual will prove to be a helpful guide. We trust it will give you a simplified look at Ohio and Federal Minor Labor Laws.

There are no conflicts between State and federal laws regulating the employment of minors. The federal law may have application to certain occupations that are not covered by Ohio law, or have a higher standard than the State law. In all cases, the law of the higher standard governs if you come under the federal law.

OHIO LAWS FOR MINORS UNDER 18

AGE AND SCHOOLING CERTIFICATES

All minors between the ages of 14 and 18 must have age and schooling certificates whether they are going to work during the summer vacation or have quit school for a full-time job. You must also have one even though you may be married and working and not attending classes.

After you have the promise of a job, the first thing to do is apply for an age and schooling certificate from your local Superintendent of Schools. You will receive pledge cards from his office. These are to be filled in by the employer and your parents, and must be returned to the Superintendent's office. They should be returned immediately because the Superintendent cannot issue the age and schooling certificate until these cards are on file in his office. The certificate is then issued to the employer and kept on file in the establishment where you are employed.

WAGE AGREEMENTS

The employer must give you a Wage Agreement when you start to work. This agreement states the amount to be paid, either hourly or weekly, and should be retained by you. If there is any question regarding the wages you receive, you will have it as proof of any claim you may have.

These wage agreements must be given to all minors under the age of 21.

PROHIBITED OCCUPATIONS

You are prohibited by law from engaging in certain occupations. These prohibited or hazardous occupations are divided into two age groups – for those under 16, and for minors 16 and 17. The occupations listed as forbidden for minors 16 and 17 are also prohibited for minors under that age. The occupations listed as forbidden for minors under 16 are not prohibited for minors 16 and 17.

MINORS 16 AND 17

No minor 16 or 17 shall be employed or permitted to work:

In, about, or in connection with blast furnaces, docks, or wharves;

In the outside erection and repair of electric wires;

In the running or management of elevators, lifts, or hoisting machines or dynamos;

In oiling or cleaning machinery in motion;

In the operation of emery wheels or any abrasive, polishing, or buffing wheel where articles of the baser metals or iridium are manufactured;

At switch tending;

At gate tending;

At track repairing;

As brakeman, fireman, engineer, motorman, or conductor upon railroads;

As railroad telegraph operator;

As pilot, fireman, or engineer upon boats and vessels;

In or about establishments wherein nitroglygerine, dynamite, dualin, guncotton, gunpowder, or other high or dangerous explosives are manufactured, compounded, or stored;

In the manufacture of white or yellow phosphorus or phosphorus matches;

In any distillery, brewery, or any other establishment where malt or alcoholic liquors are manufactured, packed, wrapped, or bottled;

In any hotel, theater, concert hall, place of amusement, or any other establishment where intoxicating liquors are sold, except that a person between the ages of 16 and 18 years enrolled in an accredited course in domestic science in a bona fide school may be permitted to supplement such course of study by practical training in a co-operative training program between any hotel or restaurant and such school. Such trainee, upon completion of said course of study, may continue as a full-time trainee in such hotel or restaurant so long as such trainee is under the supervision of the coordinator of vocational training for the public school district in which said trainee resides. Any contract involving the service of such trainee shall be approved by such coordinator.

In the operation of power-driven woodworking machines or of power-driven machines used for rolling, pressing, milling, punching, bending, hammering, or shearing metal, unless such employment is incidental to apprentice training, under the direction and supervision of an instructor as a necessary part of such apprentice training, and is carried on in accordance with a written apprenticeship agreement that has been approved by the Ohio State Apprenticeship Council or the Department of Education or unless such employment is incidental to a bona fide program of vocational co-operative training which meets the standards of the State Board of Education and which operates under the supervision of the public schools;

In the operation of power-driven guillotine paper-cutting machines;

In the operation or cleaning of any power-driven dough mixers or dough brakes, bread dividing, rounding or moulding machine, dough sheeter, bread slicing and wrapping machine, cake cutting band saw, or in setting up or adjusting a cookie or cracker machine;

In the operation or cleaning of power-driven meat grinders, saws, slicers, carvers, or circular, rotary, or disc cutting machines;

In the operation of washing machines, extractors, and flatwork ironers or mangles in laundries;

In the operation of motor vehicles and work as a helper thereon, except the following:

1 Farm tractors

2 Motor vehicles operated in connection with employment which is incidental to a bona fide program of vocational co-operative training which meets the standards of the State Board of Education and which operates under the supervision of the public schools;

In, about, or in connection with any mine or quarry, or in any coal breaker;

In the operation of steam boilers carrying over 15 pounds pressure;

In occupations involving exposure to radioactive substances;

In occupations involving exposure to toxic or noxious dust, gases, vapors, or fumes in injurious quantities;

In the manufacture or use of dangerous or poisonous dyes or chemicals, or lead and its compounds;

In logging or sawmill operations;

No child under 16 shall be employed or permitted to work in any theater or other place of amusement, except on the stage thereof when not otherwise prohibited by law or in or about any race track or race course, including the stables thereof. This section does not prohibit the employment of minors under 18 in retail drug stores or retail grocery stores.

No girl under 18 shall be employed or permitted to work at house to house selling, soliciting, or peddling of periodicals, merchandise, magazines, or photographical service, except newspapers or except under the auspices of bona fide local educational, fraternal, religious, charitable, or patriotic organizations.

MINORS UNDER 16

No minor under 16 shall be employed or permitted to work at any of the following occupations:

Adjusting any belt to any machinery;

Sewing or lacing machine belts in any workshop or factory;

Oiling, wiping, or cleaning machinery, or assisting therein;

Operating or assisting in operating any of the following machines:

- Circular or band saws;
- Wood shapers;
- Wood jointers;
- Planers;
- Sandpaper or woodpolishing machinery;
- Woodturning or boring machinery;
- Picker machines or machines used in picking wool, cotton, hair, or any other material;
- Carding machines;
- Paper-lace machines;
- Leather burnishing machines;
- Job or cylinder printing presses operated by power other than foot power;
- Boring or drill presses;
- Stamping machines used in sheet metal and tinware, or in paper and leather manufacturing, or in washer and nut factories;
- Metal or paper cutting machines;

Corner staying machines in paper box factories;
Corrugating rolls, such as are used in corrugated paper, roofing, or washboard factories;
Steam boilers;
Dough brakes or cracker machinery of any description;
Wire or iron straightening or drawing machinery;
Rolling mill machinery;
Power punches or shears;
Washing, grinding, or mixing machinery;
Calendar rolls in paper and rubber manufacturing;
Laundering machines;
Burring machinery;

In proximity to any hazardous or unguarded belts, machinery, or gearing;

Upon any railroad, whether steam, electric, or hydraulic;

Upon any vessel or boat engaged in navigation or commerce within the jurisdiction of this State.

OTHER RESTRICTIONS FOR MINORS UNDER 16

In addition to the prohibited occupations for minors under 16, there are certain types of establishments and certain types of work within industry where you are not permitted to be employed.

No minor under 16 shall be employed in any capacity:

In, about, or in connection with any processes in which dangerous or poisonous acids are used;

In the manufacture or packing of paints, colors, white or red lead;

In soldering;

In occupations causing dust in injurious quantities;

In the manufacture or use of dangerous or poisonous dyes;

In the manufacture or preparation of compositions with dangerous or poisonous gases;

In the manufacture or use of a composition of lye in which the quantity thereof is injurious to health;

In scaffolding;

In heavy work in the building trades;

In any tunnel or excavation;

In, about, or in connection with any mine, coal breaker, coke oven, or quarry;

HOURS OF EMPLOYMENT FOR MINORS

	Minors covered		Maximum hours		
Industry	Age	Item	Per day	Per week	Prohibited night hours
FACTORIES	14 and 15	Work and school combined	9	–	6 p.m. to 7 a.m.
	14 and 15	During vacations	8	48	6 p.m. to 7 a.m.
	16 and 17	Boys	8	48	10 p.m. to 6 a.m.
	16 and 17	Girls	8	48	9 p.m. to 7 a.m.
	18 and over	Girls	9	48	– –

	14 and 15	During vacations	8	48	6 p.m. to 7 a.m.
	16 and 17	Boys	8	48	10 p.m. to 6 a.m.
	16 and 17	Girls	8	48	9 p.m. to 7 a.m.
	18 and over	Girls	8	48	– –
LAUNDRIES AND DRY CLEANING	14 and 15	Work and school combined	9	–	6 p.m. to 7 a.m.
	14 and 15	During vacations	8	48	6 p.m. to 7 a.m.
	16 and 17	Boys	8	48	10 p.m. to 6 a.m.
	16 and 17	Girls	8	48	9 p.m. to 7 a.m.
	18 and over	Girls	8	48	– –
RESTAURANTS, HOTELS, AND DRIVE-INS	14 and 15	Work and school combined	9	–	6 p.m. to 7 a.m.
	14 and 15	During vacations	8	48	6 p.m. to 7 a.m.
	16 and 17	Boys	8	48	10 p.m. to 6 a.m.
	16 and 17	Girls	8	48	9 p.m. to 7 a.m.
	18 and over	Girls	9	48	– –
MISCELLANEOUS	14 and 15	Work and school combined	9	–	6 p.m. to 7 a.m.
	14 and 15	During vacations	8	48	6 p.m. to 7 a.m.
	16 and 17	Boys	8	48	10 p.m. to 6 a.m.
	16 and 17	Girls	8	48	9 p.m. to 7 a.m.
	18 and over	Girls	9	48	– –
ALL INDUSTRIES Irregular Service	Under 14	Boys and girls at all times	4	24	6 p.m. to 7 a.m.

All minors must have at least one-half hour for lunch within 5 hours of starting time.

Boys and girls are not permitted to work over 6 days in any calendar week.

The execptions to these hours laws will be found in your age group section on other pages.

In assorting, manufacturing, or packing tobacco;
In operating any automobile, motor car, or truck;
In a pool or billiard room;
In any other occupation dangerous to the life and limb, or injurious to the health or morals of such child.

GENERAL HOURS

Any minor between the ages of 14 and 18 is permitted to work 6 days in a calendar week and 48 hours a week. (A few exceptions to this law will be explained in subsequent paragraphs.) You must be given at least a 30-minute break for lunch within 5 hours after you have started to work. The breakdown on the hours law for different age groups follows.

HOURS FOR MINORS 16 AND 17

Generally, girls 16 and 17 are not permitted to work before 7 a.m. nor after 9 p.m. In retail stores, girls are permitted to work until 9:30 p.m. two evenings a week.

Boys 16 and 17 cannot work before 6 a.m. and not after 10 p.m. The exception to this law is that you may work until 11 p.m. if you are employed in a bowling alley as a pinsetter.

The number of hours boys and girls are permitted to work each day is also regulated by law. You may not work over 8 hours in any day except in retail stores. In these stores you are permitted to work 10 hours on one day each week, and you are also permitted to work a 10–hour day before the following holidays: New Year's Day, Memorial Day, Fourth of July, Thanksgiving Day, and Christmas.

HOURS FOR MINORS 14 AND 15

Your school time and working time combined must not exceed 9 hours a day. You may not work before 7 a.m. nor after 6 p.m.

When school is not in session, boys and girls may work 8 hours a day and 48 hours a week within the hours stated.

Boys may work until 10 p.m. on nights when school is not in session the next day or during summer vacations, if you have the approval of your school Superintendent.

ALL MINORS UNDER 14

If you are under 14, you may work outside of school hours at casual odd jobs. Under the law, this type of work is called "Irregular Service," and for it you do not need an age and schooling certificate.

You are permitted to work 4 hours a day, 6 days a week, but your working time cannot exceed 24 hours a week.

You can work between the hours of 7 a.m. and 6 p.m. Your work must not be confining nor involve continuous physical strain. Rest or recreation periods must interrupt the 4-hour span.

All prohibited occupations listed in previous pages apply to this age group.

MISCELLANEOUS LAWS

If you are an entertainer – for example, playing in an orchestra, dancing, or singing – the hours for your particular age group must be observed.

If you are under 14 years of age, you are not permitted to participate in any entertainment for pay. You may, if you are donating your time and talent, participate in church, school, or academy activities or in concerts or entertainments given for charitable purposes.

Under the Minor Labor Laws, the following laws refer to minors until they reach the age of 21:

1. Females under 21 are not permitted to work at any employment which compels them to remain standing constantly while on duty.
2. No female under 21 shall be employed in the personal delivery of messages.

MINIMUM WAGE LAW

The Division of Women and Minors enforces the Minimum Wage Law, which does not apply to all industries. We have Minimum Wage Regulations covering the food and/or lodging industry in Ohio as well

as dry cleaning and laundry establishments in the State.

Your employer should have a copy of the Minimum Wage Order pertaining to his particular type of business posted in the establishment so that you may acquaint yourself with the wages to be paid for your type of work.

POSTERS HELPFUL

In each establishment where a minor is employed, the employer should have, in a conspicuous place, a poster covering all these laws. You can study the poster, which will explain in further detail the laws covering your particular age group and occupation.

FEDERAL CHILD LABOR LAWS

The Fair Labor Standards Act (Federal Wage Hour Law) establishes minimum wage, overtime pay, and child labor standards for employment subject to its provisions.

The child labor standards apply to employment in interstate commerce or in the production of goods for interstate commerce, and in any enterprise engaged in commerce or in the production of goods for commerce.

Inquiries concerning the Act and its application should be directed to the nearest office of the Wage and Hour and Public Contracts Divisions, U.S. Department of Labor:

901 Atlas Bank Building
Cincinnati, Ohio 45202

213 Engineers Building
Cleveland, Ohio 44114

700 Bryden Road
Columbus, Ohio 43215

16–YEAR–MINIMUM FOR GENERAL EMPLOYMENT

At 16 years of age, children may be employed in any occupation other than an occupation declared hazardous by the Secretary of Labor. There are no other restrictions.

18–YEAR–MINIMUM FOR HAZARDOUS OCCUPATIONS
